**QUESTION 1**

What is an advantage of using the Device Configuration Wizard to configure robots and tape devices?

- A. The wizard is the only method that allows for configuration of shared drives.
- B. The wizard indicates whether the latest device drivers have been installed before attempting configuration.
- C. The wizard simplifies whether drives will be placed in a media manager or NDMP storage unit.
- D. The wizard eliminates the possibility that a drive will be mapped to the wrong physical location in a robot.

Correct Answer: D

---

**QUESTION 2**

A master server controls five media servers, each running 100 jobs per day. The master server has two CPUs and 2 GB of RAM. A company purchases an additional media server and adds it to the Symantec NetBackup 7.5 domain. The performance of the master server is severely affected and jobs are now queuing. Which action should an administrator take to resolve this problem?

- A. add disk space to the master server
- B. add CPUs to the master server
- C. add memory to the master server
- D. add HBAs to the master server

Correct Answer: A

---

**QUESTION 3**

Which two are used to change the status of a disk pool? (Select two.)

- A. nbdevquery
- B. Device Monitor
- C. Devices > Disk Pools
- D. Nbdevstatus
- E. nbdevconfig

Correct Answer: BE

---

**QUESTION 4**

A Symantec NetBackup administrator is trying to determine whether they have tapes that have been encrypted. Which report would provide this information?

- A. Tape Written
- B. Tape Lists
- C. Tape Summary
- D. Images on Tape

Correct Answer: C

---

## QUESTION 5

Four jobs enter the Symantec NetBackup 7.5 job queue simultaneously. All jobs require the same resources and there are resources available to run only one job at a time. All master server Host Properties are set to default values, as are the attributes of the policies associated with the jobs. Of the four jobs, which job will run last?

- A. Backup job
- B. Restore job
- C. Import job
- D. Duplication job

Correct Answer: A
