## QUESTION 1

On how many nodes in a 32-node cluster can the NotifierMngr run simultaneously?

- A. 1
- B. 2
- C. 16
- D. 32

Correct Answer: D

---

## QUESTION 2

Which Veritas Storage Foundation and High Availability Solutions 6.0 for Windows installation option adds fault tolerance to disk storage by making use of multiple connections between a server and a disk in a storage array?

- A. DMP Device Specific Modules (DSMs)
- B. Fast Failover
- C. Global Cluster Option (GCO)
- D. FlashSnap

Correct Answer: A

---

## QUESTION 3

An administrator changes the default value for Process agent attributes RestartLimit to 2 and ConflInterval to 180. The Process resource faulted and Veritas Cluster Server (VCS) restarted the resource. The Process resource faults again after surviving a stable online period of 4 minutes. VCS restarts the resource. How will VCS behave if the Process resource fails again after surviving a stable online period of 2 minutes?

- A. VCS restarts the resource.
- B. VCS faults the resource.
- C. VCS waits for user intervention.
- D. VCS offlines the resource.

Correct Answer: A

---

## QUESTION 4

An administrator stops an application configured in a cluster outside of Veritas Cluster Server (VCS) control. VCS takes

the resource OFFLINE instead of reporting a FAULT. Which default attribute value was changed resulting in this behavior?

- A. IntentionalOffline
- B. ManageFaults
- C. FaultPropagation
- D. ToleranceLimi

Correct Answer: A

---

## QUESTION 5

Which Veritas Storage Foundation and High Availability Solutions 6.0 for Windows installation option facilitates the use of the Fast File Resync feature to recover a file or directory from a copied volume?

- A. Volume Replicator (VVR)
- B. Fast Failover
- C. Global Cluster Option (GCO)
- D. FlashSnap

Correct Answer: D
