Correct Answer: AE

QUESTION 4

A city-wide power failure caused a data center to power down all systems. An organization has a three node cluster and one node failed to start after the power was restored. The network administrator noticed that a critical business application is unavailable and has determined that the cause is that the cluster is in a waiting state. It is critical to get the business application started immediately. What can the administrator do to force the cluster to start on one of the working nodes?

A. hacf -verify

B. hastart -all

C. net start vcscomms

D. gabconfig –cx

Correct Answer: D

QUESTION 5

A disk displays an X symbol in a red circle. What does this indicate?

A. There is a potential problem and it should be fixed immediately.

B. The disk is inaccessible, but the data is healthy.

C. There is a disk failure and it should be fixed immediately.

D. The disk is disconnected, but the data is healthy.

Correct Answer: C
