QUESTION 1

In order to use an Active Directory user as a managed item in vRealize Automation, what must be created first?

- A. A customer resource that maps to an Active Directory user object (AD:User)
- B. A customer resource that maps to an Active Directory domain controller (AD:DC)
- C. A resource action to add an Active Directory user object (AD:User)
- D. A resource action to add an Active Directory domain controller (AD:DC)

Correct Answer: C

QUESTION 2

A vRealize Automation administrator notices that when requesting a specific blueprint, machines are provisioned to different compute resources.

Which two tasks should the administrator complete to ensure that the machines provisioned from the blueprint are always placed on the same compute resource? (Choose two.)

- A. Create a new reservation and assign it to a business group.
- B. Assign a reservation to a compute resource.
- C. Create a new fabric group.
- D. Assign a reservation policy to the blueprint.
- E. Create a reservation policy and assign it to a single reservation.

Correct Answer: BC

QUESTION 3

A vRealize Automation administrator wants to run a vRealize Orchestrator workflow immediately after a virtual machine has been given an IP address by using a vSphere customization specification configured in a blueprint.

Which event subscription machine provisioning state should the administrator use to achieve this?

- A. CloneWorkflow.CustomizeMachine
- B. VMPSMasterWorkflow32.MachineActivated
- C. CloneWorkflow.CustomizeOS
- D. VMPSMasterWorkflow32.RegisterMachine

Correct Answer: D

QUESTION 4

vRealize Suite Lifecycle Manager uses MyVMware credentials to discover and download which two items? (Choose two.)

- A. vRealize Automation IaaS Windows server OS installation ISOs
- B. vRealize Automation product installation binaries
- C. vRealize Automation product license keys
- D. vRealize Automation product SSL certificates
- E. vRealize Automation product installation configuration files

Correct Answer: BD

QUESTION 5

An architect is designing a machine blueprint containing web, application and database servers utilizing NSX-T for networking. Upon provisioning, network traffic must be automatically restricted to allow the web server to communicate only with the application server, the application server to communicate with both the web and database servers, and the database server to be blocked from communicating with the other servers.

Which methods can be used to accomplish this?

- A. Add an appropriate security group to the blueprint from within the Blueprint Properties, under NSX Settings.
- B. Specify an appropriate NSX-T Existing Network and Security (NS) Group in the blueprint and assign it to each machine.
- C. Create or update an appropriate security group within NSX-T to include the provisioned machines.
- D. Assign an appropriate security group to the entitled items or entitled service with the entitlement.

Correct Answer: C
