**QUESTION 1**

Refer to the Exhibit.

While building an application blueprint, the administrator cannot add a vPostgres database service to the new operating system, as shown in the exhibit.

What is needed to resolve this?

A. Drag and drop vPostgres from the Services menu onto the new operating system.

B. Delete the current operating system and deploy a new Database Server that includes vPostgres.

C. Drag and drop a vPostgres Application Component to join the existing operating system and vPostgres objects.

D. Add an External Service Instance Profile to the Deployment Environment.

Correct Answer: A

**QUESTION 2**

An IP address is provisioned from a vRealize Automation Network Profile static IP range. What will happen when the

workload using the IP address is destroyed?

A. It will be automatically returned to the range for reuse within minutes.

B. It will be batched with all reclaimable addresses and returned to the range daily.

C. It will be permanently marked as unavailable for that specific range to prevent IP conflicts.

D. It will be marked as unavailable until the range is deleted and recreated.

Correct Answer: A

**QUESTION 3**

An administrator incorrectly enters password information for the darwin_user account and locks the account.

What procedure can be used to unlock the account?

A. From the vSphere Web Client, browse to Administration > Access > SSO Users and Groups > Locked Users, right-click on the darwin_user account and select Unlock.

B. From the VMRC Console of the Application Services appliance, log in as the root user and enter: faillog -u darwin_user -r

C. From the Application Services Remote CLI, log in as the root user and enter: passwd -u darwin_user

D. From the Application Services Web Interface, choose Administration from the drop down list and select Users, right-click on the darwin_user account and select Unlock.

Correct Answer: B

**QUESTION 4**
