QUESTION 1

An administrator incorrectly enters password information for the darwin_user account and locks the account.

What procedure can be used to unlock the account?

- A. From the vSphere Web Client, browse to Administration > Access > SSO Users and Groups > Locked Users, right-click on the darwin_user account and select Unlock.
- B. From the VMRC Console of the Application Services appliance, log in as the root user and enter: faillog -u darwin_user -r
- C. From the Application Services Remote CLI, log in as the root user and enter: passwd -u darwin_user
- D. From the Application Services Web Interface, choose Administration from the drop down list and select Users, right-click on the darwin_user account and select Unlock.

Correct Answer: B

QUESTION 2

Refer to the Exhibit.

Recent Events

View recent events for your infrastructure resources.

Date	Message
10/1/2014 7:41 AM	Machine IT013: Failed to destroy multi-machine service: An error occurred while executing the workflow. For more details, see the inner exception.
10/1/2014 7:41 AM	Machine IT013: Failed to delete one or more networks and security settings. Error: Could not reach vCenter Orchestrator endpoint (0). Trying the next highest priority endpoint.
9/30/2014 7:20 AM	Multi-machine service IT008 request failed for component blueprint 'Windows 2012 R2 Base': Allocate reservation operation failed for business group IT Infrastructure. No reservation available to allocate the requested resources. See recent events log for more information.
9/30/2014 7:20 AM	Multi-machine service IT008 request failed for component blueprint 'Edge': Store update, insert, or delete statement affected an unexpected number of rows (0). Entities may have been modified or deleted since entities were loaded. Refresh ObjectStateManager entries.
9/25/2014 2:18 PM	Cannot find network profile NAT01.
9/25/2014 2:10 PM	Cannot find network profile Nat01.
9/25/2014 2:07 PM	Cannot find network profile Nat01.

An administrator is looking at Recent Events under the Infrastructure tab for successful snapshot creation events as shown in the exhibit.

The administrator has created several snapshots successfully.

Based on the exhibit, why are those events not displayed?

- A. The Event types should be set to Warnings.
- B. The Event types should be set to Informational notices.
- C. There is a Filter set to display only Errors.
- D. Snapshot creation events do not display in Recent Events.

Correct Answer: B

QUESTION 3

An administrator needs to meet a department's temporary requirement for additional testing and development capacity of an unknown size.

Where should the administrator create a reservation for this Business Group within vRealize Automation?

- A. In an existing vCloud Director Dynamic Allocation virtual datacenter
- B. In an existing vCloud Director Allocation Pool virtual datacenter
- C. In an existing vCloud Director Reservation Pool virtual datacenter
- D. In an existing vCloud Director Pay As You Go virtual datacenter

Correct Answer: D

QUESTION 4

A business group administrator is assigned to build three blueprints each with the same twenty custom properties.

What would be the best approach to avoid mistakes with custom property entry?

- A. Create a build profile that includes the custom properties.
- B. Create a custom property macro that includes the custom properties.
- C. Create a property group that includes the custom properties.
- D. Create a property profile that includes the custom properties.

Correct Answer: A

QUESTION 5

Which three steps are necessary after creating a custom service blueprint to make it available for end user consumption? (Choose three.)

- A. An approval administrator needs to approve the blueprint
- B. The blueprint needs to be added to a service
- C. Entitlements for the blueprint have to be created
- D. The blueprint needs to be published
- E. The blueprint needs to be added to a Business Group

Correct Answer: BCD
