## QUESTION 1

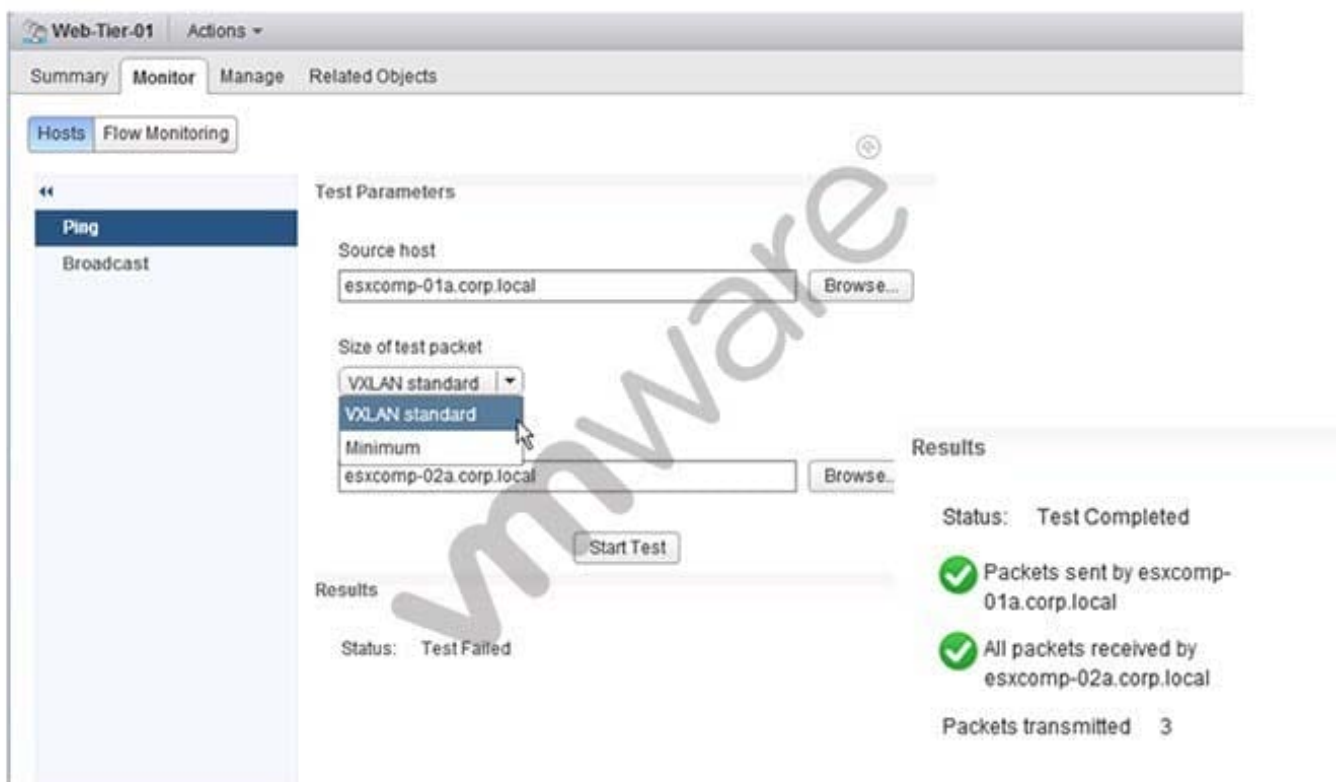

What are two advantages for using NSX for vSphere's Logical Switching? (Choose two.)

- A. Expands the number of available VLANs.
- B. Allows for Layer 2 switching over Layer 3 infrastructure.
- C. Distributes Layer 3 data across multiple hypervisors
- D. Provides for 10,000 logical segments.

Correct Answer: BD

## QUESTION 2

-- Exhibit -

-- Exhibit -

An administrator is testing connectivity between two ESXi hosts and uses the ping utility, as shown in the Exhibit.

Based on the results shown in the exhibit, which statement is correct?

- A. Communication between the hosts is working correctly.
- B. The hosts are in separate subnets.
- C. The MTU size is too small.
- D. A logical router has not been deployed and configured.

Correct Answer: C

---

### QUESTION 3

A network security administrator wants to monitor traffic on several VLANs configured on a vSphere Distributed Switch. The traffic will be sent to another distributed port.

What type of port mirroring session must be configured to meet these requirements?

- A. Select the session type Distributed Port Mirroring when configuring the Port Mirroring session.
- B. Select the session type Remote Mirroring Source when configuring the Port Mirroring session.
- C. Select the session type Remote Mirroring Destination when configuring the Port Mirroring session.
- D. Select the session type Distributed Port Mirroring (legacy) when configuring the Port Mirroring session.

Correct Answer: C

---

### QUESTION 4

How is the Bridge Instance chosen?

- A. It is chosen based on the ESXi host where the Logical Router Control VM is running.
- B. It is manually assigned by the vSphere administrator when the distributed portgroup is configured.
- C. During an election process among all ESXi hosts. The host with the highest MAC address is selected.
- D. The VTEP configured with the highest VXLAN Network Identifier (VNI) is selected.

Correct Answer: A

---

### QUESTION 5

-- Exhibit -

-- Exhibit -An NSX administrator has deployed the network shown in the Exhibit.

Based on the exhibit, which statement describes a valid method for redirecting traffic around the fault?

- A. Building this topology using a layer 2 switched fabric with connectivity between the leafs would allow traffic to be redirected around the fault to another leaf.
- B. Building this topology using a layer 3 routed fabric with connectivity between the leafs would allow traffic to be redirected around the fault to another leaf.
- C. Building this topology using a layer 2 switched fabric with spanning tree will provide the quickest path around the fault to another spine when connectivity is lost.
- D. Building this topology using a layer 3 routed fabric will provide the quickest path around the fault to another spine when connectivity is lost.

Correct Answer: D
