QUESTION 1

A business group has multiple reservations containing devices that support NetApp FlexClone as well as traditional vSphere datastores.

How can an administrator ensure that certain virtual machines are provisioned using the FlexClone devices?

- A. Create a property group for the FlexClone devices.
- B. Create a storage reservation policy for the FlexClone devices.
- C. Create a storage profile for the FlexClone devices.
- D. Create the reservations for the FlexClone devices with a high priority.

Correct Answer: B

A storage reservation policy is essentially a tag applied to one or more datastores or storage profiles by a fabric administrator to group datastores or storage profiles that have similar characteristics, such as speed or price. A datastore or storage profile can be assigned to only one storage reservation policy at a time, but a storage reservation policy can have many different datastores or storage profiles.
