QUESTION 1

The implementations group has been using the test bed to do a 'proof-of-concept' that requires both Client 1 and Client 2 to access the WEB Server at 209.65.200.241.

After several changes to the network addressing, routing scheme, DHCP services, NTP services, layer 2 connectivity, FHRP services, and device security, a trouble ticket has been opened indicating that Client 1 cannot ping the 209.65.200.241 address.

Use the supported commands to isolated the cause of this fault and answer the following questions.

On which device is the fault condition located?

- A. R1
- B. R2
- C. R3
- D. R4
- E. DSW1
- F. DSW2
- G. ASW1
- H. ASW2

Correct Answer: D

On R4, in the redistribution of EIGRP routing protocol, we need to change name of routemap to resolve the issue. It references route-map OSPF_to_EIGRP but the actual route map is called OSPF->EIGRP. Since Client 1 is able to ping the near-end interface of the router R4 but not the far-end interface, we can be reasonably certain that the fault condition is with R4.

QUESTION 2

In what situation would the command ip helper-address be required? (Choose the best answer.)

- A. Only when there is a duplicate IP address caused by a combination of static and dynamic IP address allocations
- B. On each router that exists between the client and the server
- C. Only when a router separates the client from the server
- D. Only if the DHCP sever issues a DHCPNAK to the initial request
- E. Only when the client is on the same subnet as the server
- F. Only when the DHCP pool is out of IP addresses

Correct Answer: C

QUESTION 3

Configuration on R1 interface Serial0/0/1 description Link to ISP ip address 209.65.200.224 255.255.255.252 ip nat outside ip access-group edge_security in ! ip access-list extended edge_security deny ip 10.0.0.0 0.255.255.255 any deny ip 172.16.0.0 0.15.255.255 any deny ip 192.168.0.0 0.0.255.255 any deny 127.0.0.0 0.255.255.255 any permit ip host 209.65.200.241 any ! The Fault Condition is related to which technology?

- A. BGP
- B. NTP
- C. IP NAT
- D. IPv4 OSPF Routing
- E. IPv4 OSPF Redistribution
- F. IPv6 OSPF Routing
- G. IPv4 layer 3 security

Correct Answer: G

QUESTION 4

Drag the properties from the left onto their corresponding Unicast Reverse Path Forwarding mode on the right. Not all properties are used.

Select and Place:

Source address must appear in routing table	Strict Mode 1	
Source packet must be received on the interface that will forward the return traffic		2
Configured on layer-2 switches	Loose Mode 1	
Configured on internet router outside interfaces		2
Default route can be used in the source verification process		3
Configured on internet router inside interface		

Correct Answer:

Strict Mode

- Source packet must be received on the interface that will forward the return traffic
- Configured on internet router inside interface

Loose Mode

- Source address must appear in routing table
- Configured on internet router outside interfaces
- Default route can be used in the source verification process

QUESTION 5

Regarding extended ping, why ping is failed (refer to exhibit)?

- A. df bit is set (should be unset, mtu issue)
- B. <https://www.certbus.com/300-135.html>
- C. <https://www.certbus.com/300-135.html>
- D. <https://www.certbus.com/300-135.html>

Correct Answer: A
