#### QUESTION 5

A network administrator is seeing a posture status "unknown" for a single corporate mac address but unknown machines are reported as "complaint". Which option is the reason for machine being reported "unknown".

- A. Posture service disabled on cisco ISE
- B. Posture policy does not support the OS
- C. Posture agent not installed on the machine
- D. Posture compliance condition is missing on the machine

Correct Answer: C

When a client first attempts to join the network, it might not have a NAC agent available to perform a posture assessment. Without a NAC agent, ISE will have no mechanism to determine what software is running on the endpoint. Accordingly, the endpoint will not know how to communicate its posture assessment to ISE. For this reason, an endpoint without a posture agent will be assigned an Unknown posture status.
