- E. crm resource new

Correct Answer: D

---

## QUESTION 2

When running a Linux Virtual Server (LVS) cluster, what is the purpose of a nanny process?

- A. Each nanny process checks the state of one configured service on one real server, and tells LVS if the service on that real server is malfunctioning.
- B. The nanny process powers off a nonfunctional backend server.
- C. The nanny process restarts the daemon of a failed service on a real server node.
- D. The nanny process changes the IP routing table in the Linux kernel according to the LVS configuration.

Correct Answer: A

---

## QUESTION 3

Which of the following data should be copied to the virtual machine when migrating a physical machine to a virtual machine?

- A. The block device buffers
- B. The CPU flags
- C. The file systems or their content
- D. The CPU register's content
- E. The memory

Correct Answer: C

---

## QUESTION 4

When migrating a physical machine to a full virtualized machine, which of the following properties should be expected to change from the perspective of the guest operating system? (Choose TWO correct answers.)

- A. The user accounts within the guest operating system.
- B. The properties of the CPU and other hardware devices.
- C. The MAC address of the network interfaces.
- D. The version of the guest operating system.
- E. The software and applications installed on the guest system.

Correct Answer: BC

---

## QUESTION 5

How can the state of the backing storage disks of a DRBD device be checked? (Choose TWO correct answers.)

- A. `cat /proc/drdb/status`
- B. `cat /proc/drdb`
- C. `drbdadm dstate all`
- D. `drbdadm diskstatus all`
- E. `drbdadm state --disk all`

Correct Answer: BC
