QUESTION 1

Which two statements describe how adaptations affect the routing of a request? (Choose two)

- A. Session Manager making the routing decisions after applying any administered incoming adaption
- B. Session Manager making the routing decisions after applying any administered outgoing adaption
- C. Session Manager making the routing decisions before applying any administered incoming adaption
- D. Session Manager making the routing decisions before applying any administered outgoing adaption

Correct Answer: AD

QUESTION 2

Which URL should be used to access the web console to install a System Manager template?

- A. <https://135.0.0.5/webconsole>
- B. <https://135.0.0.6/webconsole>
- C. <https://135.0.0.7/SMGR>
- D. <https://135.0.0.7/webconsole>

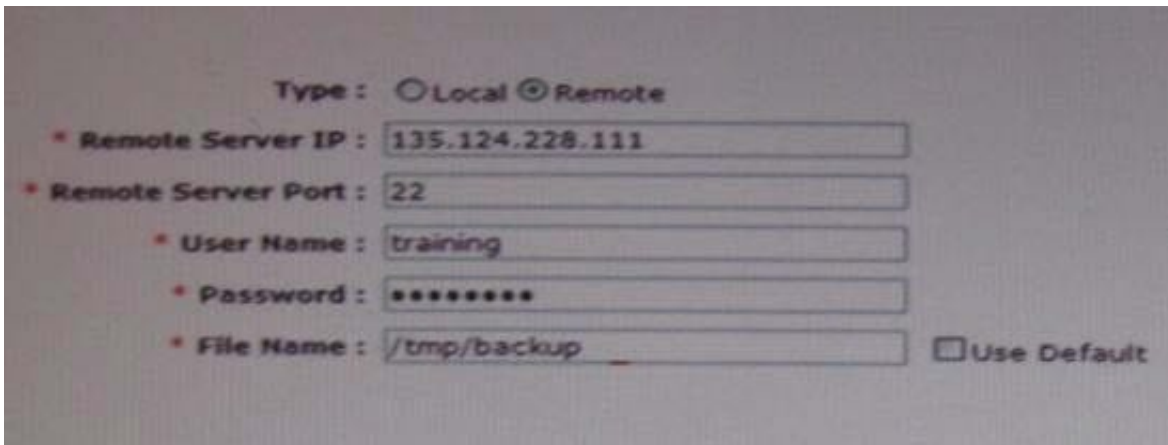

Correct Answer: C

QUESTION 3

A technician is tasked with moving a user from one redundant Session Manager pair to another. Which sequence describes the steps that should be taken?

- A. Go to the User's User Profile. Select different Session Manager instance from the Primary Session Manager and Secondary Session Manager lists.
- B. Go to the user's User Profile. De-select the current community. Select the new community.
- C. Navigate to the Communities page. Select the Community into which the user will be moved. Select the user from a drop down list to add the user to the community.
- D. Go to the Locations page. Select a location, define it as a Primary community and add the user. Select another location, define it as a Secondary community and add the user.

Correct Answer: A

QUESTION 4

When performing a remote backup of system Manager data the administrator is asked for a user name and password. Which statement best explains why a user name and password are required?

- A. The backed-up data file is encrypted. The username and password are used in encryption process and subsequently to access the file on restoring backed up data.
- B. The backed-up data is stored on a remote server using SCP. The user name and password are used to login remote server.
- C. Because System Manager Data is being exported from the server for security and authentication purpose system Manager once again checks the administrator's credentials.
- D. All System Manager Data is backed up to common storage repository setup during installation. For system Manager to access the repository the correct user name and password must be supplied.

Correct Answer: B

QUESTION 5

Shortly after an installation, SIP users in abc.com domain are registered but not able to call H.323 users in training.com domain. When you run traceSM you see a "403 Forbidden" error when users try to call each other.

What is the issue and which troubleshooting procedure will help you to identify and isolate the problem?

- A. Replication Failure: run initDRS to reinitialize the synchronization between system and session manager.
- B. Network Issue: status the Bandwidth usage to each location and make sure Call Admission Control is activated.
- C. Misconfigured Communication profile: Sip Users have not been associated to the CM endpoint.
- D. Incorrect Routing: verify domains were properly configured in System Manager, verify an adaption to modify the secure/destination domain was created and applied to the appropriate sip entity.

Correct Answer: C
