QUESTION 1

On a SIP Entity that is defined as type session Manager, what should be defined?

A. an adaptation

B. listening ports

C. an outbound proxy

D. a credential name

Correct Answer: B

QUESTION 2

A new Application Sequence has already been defined in the network. A technician has been asked to apply Application Sequence to all incoming calls for all employees in the Berlin office.

Which sequence describes the steps that should be taken?

A. Go to the User Management page and use the filter option to list only the users in the Berlin office-Select each user from the filtered list and edit each user\'s User Profile. Apply the new Application Sequence to the Terminating Application Sequence for each user.

B. Navigate to the Communication Profile Editor and use the filter option to list only the users in the Berlin location. Select All. Select the new Application Sequence from the Terminating Application Sequence drop down box.

C. Go to the list of Application Sequences and edit the new Application Sequence, adding the Berlin location to the list of associated locations.

D. Edit the Berlin Location to include the new Application Sequence as its Terminating Application Sequence.

Correct Answer: B

QUESTION 3

Session Manager has a routing policy that routes calls made to any number beginning with \\'100\\' to SIP Entity X. However, \\'sip.-1001avaya.com\\' is the SIP communication profile address of user Y. User Y is not currently registered (signed in) with Session Manager.

What will happen if Session Manager receives a call addressed to \\'sip.-1001avaya.com\\' and why?

A. It depends on the time ranges of the policy. If the call is placed inside a defined time range for the policy, the call will be routed to destination X. If not, then Session Manager will attempt to route the call to user Y. Since Y is not registered, the call will timeout, and the call will fail.

B. Since user Y is not currently registered, the call will be handled by the routing policy. If the call is placed during a time range specified by the policy, then the call will be routed to destination X. If not, then the call will fail.

C. Since the destination URI matches a communication profile SIP handle, Session Manager will not use the routing policy in handling the call. The call will fail since user Y is not currently registered.

D. Since the destination URI matches a routing policy dial pattern, Session Manager will give no consideration to the user Y registration status. If the call is made during a time range for the policy, the policy will be applied and the can will be routed to destination X. If not, then the original URI of \\'sip.-1001avaya.com\\' will be used as the destination to which Session Manager will route the call.

Correct Answer: C

QUESTION 4

Company XYZ has a multi-location voice network. They have Session Manager at their main site and Avaya Communication Manager (CM) and Cisco Call Manager at their branch locations. Which type of messages does Session Manager send to the Avaya and Cisco PBX configured as SIP Entities to monitor their status?

A. ENTITY

B. LINK

C. OPTIONS

D. STATUS

Correct Answer: C

QUESTION 5

Which two statements describe how adaptations affect the routing of a request? (Choose two)

A. Session Manager making the routing decisions after applying any administered incoming adaption

B. Session Manager making the routing decisions after applying any administered outgoing adaption

C. Session Manager making the routing decisions before applying any administered incoming adaption

D. Session Manager making the routing decisions before applying any administered outgoing adaption

Correct Answer: AD
