QUESTION 1

Sherry is programming an online game and is trying to prevent security threats from being introduced into the game. She is also trying to prevent any kind of online cheating by searching for possible anomalies. Sherry especially wants to prevent cheating where a program or application is used to replace human reaction to produce superior results.

What category of online cheating is she most concerned about?

- A. Authoritative clients
- B. Reflex augmentation
- C. Artificial intelligence intervention
- D. Vector-time augmentation

Correct Answer: C

QUESTION 2

David is an applications developer working for Dewer and Sons law firm in Los Angeles David just completed a course on writing secure code and was enlightened by all the intricacies of how code must be rewritten many times to ensure its

security. David decides to go through all the applications he has written and change them to be more secure. David comes across the following snippet in one of his programs:

```
#include  
  
int main(int argc, char **argv)  
{  
    int number = 5;  
    printf(argv[1]);  
    putchar(`\n`);  
    printf("number (%p) is equal to %d\n",  
    andvalue, value);  
}
```

What could David change, add, or delete to make this code more secure?

- A. Change `putchar(`\n`)` to `putchar("%s", `\\n`)`
- B. Change `printf(argv[1])` to `printf("%s", argv[1])`

- C. Change `printf(argv[1])` to `printf(constv [0])`
- D. Change `int number = 5` to `const number = ""`

Correct Answer: B

QUESTION 3

What function can be used with SQL to encrypt user supplied-passwords so that they can be compared with the encrypted passwords stored on the SQL server?

- A. `pwdencrypt()`
- B. `userencrypt()`
- C. `DESpassword()`
- D. `passwordin()`

Correct Answer: A
