QUESTION 1

Which two combinations are valid LACP configurations that will set up an LACP channel? (Choose two.)

- A. on-passive
- B. on-auto
- C. passive-active
- D. desirable-auto
- E. active-active
- F. desirable-desirable

Correct Answer: CE

QUESTION 2

Refer to the exhibit. All routers in this network are configured to run OSPF on all their connected links. R1 is redistributing 192.168.1.0/24 into Area 1. When the 192.168.1.0/24 network is disconnected from R1, the network administrator notes that R4 and R3 both receive two OSPF updates. Since 192.168.1.0/24 is within Area 1, the network administrator thinks this may indicate incorrect operation and calls technical support. Is this incorrect OSPF operation, and why or why not?

- A. This is correct operation; R3 should receive new LSAs from R1, and R4 should receive one updated LSA from R1 and another from R2.
- B. This is correct operation; R4 will receive an updated router (type 1) LSA from R1 and an OSPF update removing the external (type 5) LSA from the OSPF database.
- C. This is incorrect operation; R4 should only receive one LSA when 192.168.1.0/24 is disconnected from R1.
- D. This is incorrect operation; R4 should not receive any LSAs when 192.168.1.0/24 is disconnected from R1.

Correct Answer: A

QUESTION 3

For a router connected to two ISPs for redundancy, using IP SLA and static routing, how would you configure uRPF on the uplink interface?

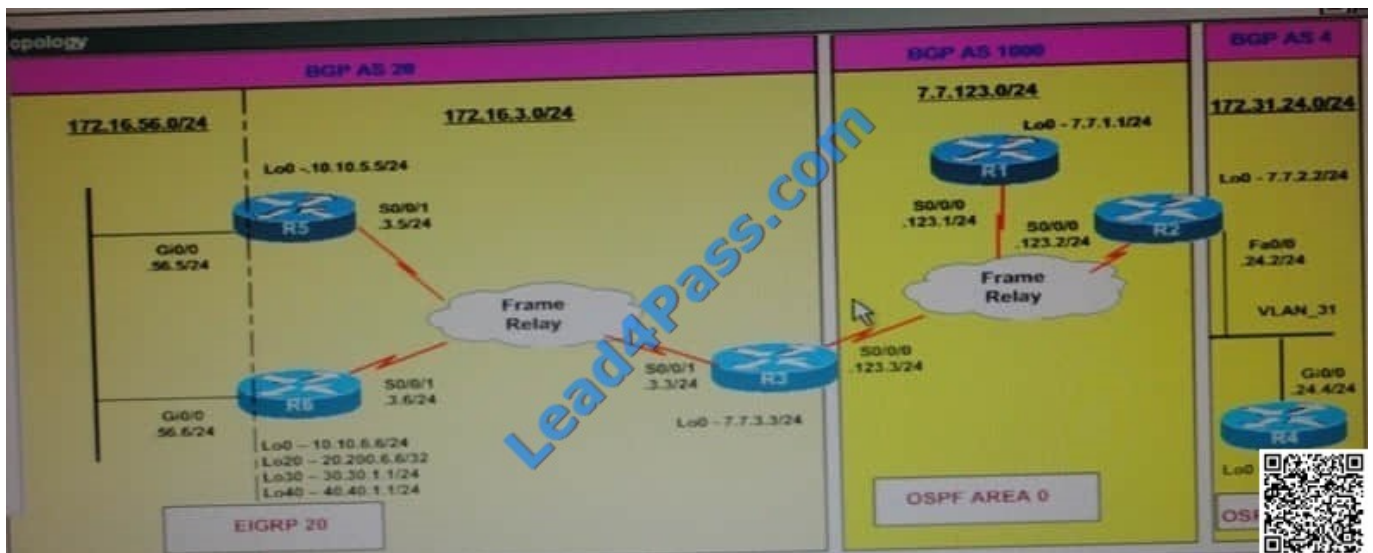

- A. ip verify unicast source reachable-via any
- B. ip verify unicast reverse-path
- C. ip verify unicast reverse-path loose
- D. ip verify unicast reverse-path strict

Correct Answer: A

QUESTION 4

Refer to the exhibit. We have IPv6 multicast configured between R5 and R6, which three statements are true based on the partial command output shown? (Choose three)

R6#sh ipv6 mroute

```
(*,FF04::10), 01:15:32/never, RP 2001:DB8:5::5, flags: SPC Incoming interface: GigabitEthernet0/0 RPF nbr: FE80::216:47FF:FE8B:FF0
```

```
(*,FF04::30), 00:00:07/never, RP 2001:DB8:5::5, flags: SPC Incoming Interface: GigabitEthernet0/0 RPF nbr: FE80::216:47FF:FE8B:FF0
```

- A. R6 has joined one multicast group, and it expires in 46 seconds.
- B. The rendezvous point address is 2001:DB8:5::5.
- C. The multicast group address is FE80::216.
- D. R6 has joined two multicast groups, and it expires in 7 seconds.
- E. The multicast entry is operating in sparse mode.
- F. The multicast groups are FF04::10 and FF04::30.

Correct Answer: BEF

QUESTION 5

Which mechanism can you use to achieve sub-second failover for link failure detection when a switched Ethernet media is used and loss of signal is not supported by the link provider?

- A. OSPF standard hellos
- B. Cisco Discovery Protocol link detection
- C. Bidirectional Forwarding Detection
- D. Fast Link Pulse
- E. autonegotiation

Correct Answer: C
