QUESTION 1

A virtual port channel (vPC) allows links that are physically connected to two different Cisco Nexus devices to appear as a single port channel to a third device.

Which are the mandatory steps for configuring vPC? (Choose six.)

A. Enable feature vPC

B. Define domains

C. Establish peer keepalive connectivity

D. Create a peer link

E. Configure the peer link as a trunk port

F. Create port channels and vPCs

G. Define port channel load-balancing method

H. Make sure configurations are consistent

Correct Answer: ABCDFH

QUESTION 2

Which three statements about the DHCP snooping feature on Cisco Nexus switches are true? (Choose three.)

A. DHCP snooping commands are not available until the feature is enabled with the feature dhcp-snooping command.

B. When you enable the DHCP snooping feature, the switch begins building and maintaining the DHCP snooping binding database.

C. The switch will not validate DHCP messages received or use the DHCP snooping binding database to validate subsequent requests from untrusted hosts until DHCP snooping is enabled globally and for each specific VLAN.

D. Globally disabling DHCP snooping removes all DHCP snooping configuration on the switch.

E. Globally disabling DHCP snooping does not remove any DHCP snooping configuration or the configuration of other features that are dependent upon the DHCP snooping feature.
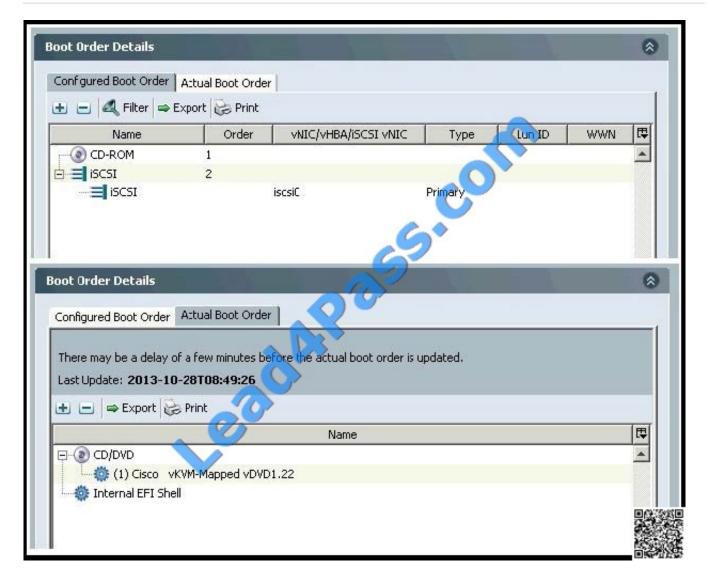

Correct Answer: BCE

QUESTION 3

Refer to the exhibit.

You have associated a newly created service profile to a blade. When you examine the configured boot order and actual boot order, they do not match. Which two statements describe reasons for this mismatch? (Choose two.)

A. Having a single iSCSI boot target would prevent the profile from associating, and would generate a configuration error.

B. The server must complete a POST cycle before Cisco UCS Manager will update this information.

C. The blade needs to be reacknowledged.

D. The server is in the process of a firmware upgrade.

E. There may be a configuration error in the service profile.

Correct Answer: BE

QUESTION 4

Which two statements about Cisco Nexus 1000V Series Switches are correct? (Choose two.)

A. When VSM interfaces are created for a virtual machine, the VMware vSwitch port-group configuration is used initially, which requires the creation of a port-group name for these interfaces and an appropriate VLAN. The simplest configuration is to create a single port group (for example, VSM-Interfaces), that includes all the interfaces that use this port group and the same VLAN.

B. The mgmt0 interface on the VSM does not necessarily require its own VLAN. In fact, you can use the same VLAN to which the VMware vCenter Server belongs. The VSM management VLAN is really no different from any other virtual machine data VLAN. Alternatively, network administrators can designate a special VLAN for network device management.

C. Always deploy the Cisco Nexus 1000V Series VSM in pairs, with one VSM that is defined as the primary module and the other that is defined as the secondary module on two separate hosts.

D. The service console is a critical interface that resides on every logical server.

Correct Answer: BC

QUESTION 5

On a Cisco UCS B250 server, how many physical DIMM slots make up one logical DIMM?

A. 2

B. 3

C. 4

D. 6

E. 12

Correct Answer: A
