QUESTION 1

DRAG DROP

Drag and drop the virtual components from the left onto their descriptions on the right.

Select and Place:

vNIC	zip file connecting a virtual machine configuration file and a virtual disk
OVA	file costarring a virtual machine disk drive
VMDK	configuration file costarring settings for a virtual machine such as guest OS
VMX	component of a virtual machine responsible for sending packets to the hypervisor

Correct Answer:

	VMX
	VMDK
	OVA
	vNIC

QUESTION 2

Which router is elected the IGMP Querier when more than one router is in the same LAN segment?

- A. The router with the shortest uptime
- B. The router with the lowest IP address
- C. The router with the highest IP address
- D. The router with the longest uptime

Correct Answer: B

Query messages are used to elect the IGMP querier as follows: 1. When IGMPv2 devices start, they each multicast a general query message to the all-systems group address of 224.0.0.1 with their interface address in the source IP address

field of the message. 2. When an IGMPv2 device receives a general query message, the device compares the source IP address in the message with its own interface address. The device with the lowest IP address on the subnet is elected

the IGMP querier. 3. All devices (excluding the querier) start the query timer, which is reset whenever a general query message is received from the IGMP querier. If the query timer expires, it is assumed that the IGMP querier has gone down,

and the election process is performed again to elect a new IGMP querier.
