QUESTION 1

vPath is a critical component in the VNS architecture. Which two are functions of vPath? (Choose two.)

A. intelligent traffic steering to the VSG

B. offloading the processing from the VSG to the VEM

C. intelligent traffic steering to the VNMC

D. offloading the processing from the VSG to the flow manager

E. deep packet inspection

Correct Answer: AB

QUESTION 2

Select and Place:

Drag the service profile modifications that require a blade reboot to be effective from the left and drop them in the list on the right. Not all options will be used.	
adding a VLAN to a vNIC	**Will Require Blade Reboot**
changing the iSCSI authentication profile	
enabling fabric failover	
changing a QoS system class MTU	
enabling Cisco Discovery Protocol on a vNIC	
assigning an IPMI policy	

Correct Answer:

| Drag the service profile modifications that require a blade reboot to be effective from the left and drop them in the list on the right. Not all options will be used.	
adding a VLAN to a vNIC	**Will Require Blade Reboot**
	changing the iSCSI authentication profile
	enabling fabric failover
changing a QoS system class MTU	
enabling Cisco Discovery Protocol on a vNIC	
assigning an IPMI policy	

QUESTION 3

ACE can check the health of servers and server farms by configuring health probes (sometimes referred to as keepalives). There are several types of probes. Which three options are valid ACE probes? (Choose three.)

A. TCP

B. ICMP

C. HTTP

D. IPsec

Correct Answer: ABC

QUESTION 4

Refer to the exhibit.
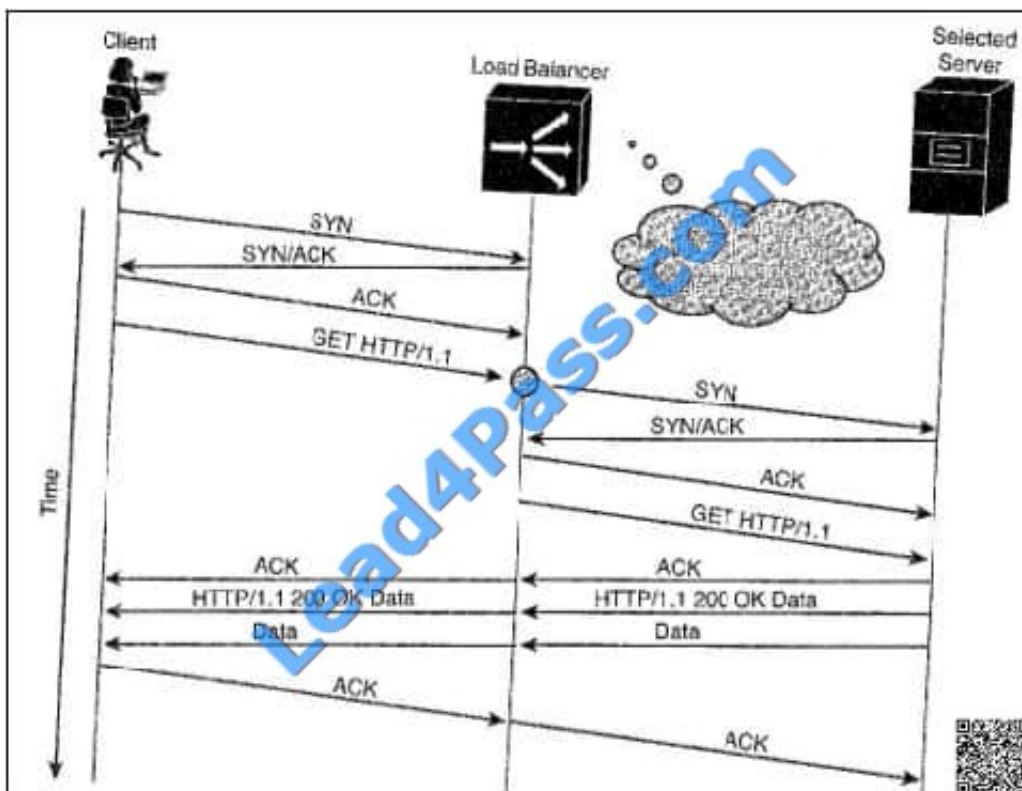

In the figure, the load balancer acts a transparent TCP proxy, and establishes the connection with the client on behalf of the real server. What is this type of spoofing called?

A. delayed binding

B. software-based load balancing

C. transport proxy

D. application binding

Correct Answer: A

QUESTION 5

The Cisco Nexus 1000V Series Switches are virtual machine access switches that are an intelligent software switch implementation for VMware vSphere environments running the Cisco NX-OS Software operating system. Together with the VMware ESX hypervisor, the Nexus 1000V supports Cisco VN-Link server virtualization technology, which provides mobile virtual machine security and network policy for VMware View components, including the DHCP snooping feature. DHCP snooping is disabled on the Nexus 1000V by default.

When the DHCP snooping feature is enabled on the Nexus 1000V, what are the default trust settings for the vEthernet and uplink ports?

A. All vEthernet ports are trusted, and all Ethernet ports such as uplinks and port channels are trusted.

B. All vEthernet ports are not trusted, and all Ethernet ports such as uplinks and port channels are not trusted.

C. All vEthernet ports are trusted and all Ethernet ports such as uplinks and port channels are not trusted.

D. All vEthernet ports are not trusted and all Ethernet ports such as uplinks and port channels are trusted.

Correct Answer: D
