QUESTION 2

Black-box testing is a method of software testing that examines the functionality of an application (e.g. what the software does) without peering into its internal structures or workings. Black-box testing is used to detect issues in SQL statements and to detect SQL injection vulnerabilities.

Web Browser

Server Side Code (BadLogin.aspx)

Most commonly, SQL injection vulnerabilities are a result of coding vulnerabilities during the Implementation/Development phase and will likely require code changes.

Pen testers need to perform this testing during the development phase to find and fix the SQL injection vulnerability.

What can a pen tester do to detect input sanitization issues?

A. Send single quotes as the input data to catch instances where the user input is not sanitized

B. Send double quotes as the input data to catch instances where the user input is not sanitized

C. Send long strings of junk data, just as you would send strings to detect buffer overruns

D. Use a right square bracket (the "]" character) as the input data to catch instances where the user input is used as part of a SQL identifier without any input sanitization

Correct Answer: D

QUESTION 3

Which of the following is developed to address security concerns on time and reduce the misuse or threat of attacks in an organization?

A. Vulnerabilities checklists

B. Configuration checklists

C. Action Plan

D. Testing Plan

Correct Answer: A

QUESTION 4

Which of the following acts is a proprietary information security standard for organizations that handle cardholder information for the major debit, credit, prepaid, e-purse, ATM, and POS cards and applies to all entities involved in payment card processing?

A. PIPEDA

B. PCI DSS

C. Human Rights Act 1998

D. Data Protection Act 1998

Correct Answer: B
