-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

QUESTION 1

What is NOT a component of VSD?

- A. Neutron
- B. Statistics Engine
- C. Policy Management Engine
- D. RESTful API

Correct Answer: C

QUESTION 2

Refer to the diagram. Which statement is describing a step incorrectly?

A. Step a, which consists of defining network domain and policy templates on VSD, must be performed first in all situations.

B. Step d, which refers to the VRS agent informing the VSC of the placement of a new VM, is triggered by step f in which the VM is instantiated on a hypervisor.

C. Step b, in which the VSC queries VSD on network service and policies required for a new VM, is triggered either by API calls from the CMS or by manual configuration.

D. Step e, in which the forwarding tables are deployed, consists of the VSC sending them not only to the VRS agent hosting the new VM, but to all applicable VRS agents.

Correct Answer: D

QUESTION 3

Which statement correctly describes cloud computing?

- A. Services are statically provisioned by a cloud service provider.
- B. Services are offered as needed through the Internet.
- C. SDN is the key enabler for cloud computing.
- D. It provides convenient, permanent network access to a shared pool of computing resources.

Correct Answer: D

Cloud computing is a model for enabling convenient, on-demand network access to a shared pool of configurable computing resources.

QUESTION 4

Which VSD component provides a south-bound interface for communication with the VSC?

- A. VSD Mediator
- B. Statistics Engine
- C. Policy Management Engine
- D. RESTful API

Correct Answer: A

VSD mediator is a VSD Southbound interface used for communication to the VSC. Reference: <https://matscloud.blogspot.com/2017/06/nuage-networks-vsp-deep-dive.html>

QUESTION 5

Which protocol is used for VSC federation?

- A. BGP VPN-IPv4
- B. BGP EVPN
- C. Openflow
- D. XMPP

Correct Answer: C

The VSC uses standard protocols to peer with existing networks, allowing it to discover full network topology and reachability. Through Openflow, it distributes relevant switching and routing information to hypervisors within the virtualized datacenter network.
