## QUESTION 1

What is NOT a function performed by VSD?

- A. VSD is the service definition point where all the network service and policy templates are created.
- B. VSD is an analytics engine that can provide historic and real time information on the network and the VM usage of the network.
- C. VSD communicates to the cloud management systems through RESTful APIs.
- D. VSD is the DNS and NTP server for the datacenter network.

Correct Answer: C

---

## QUESTION 2

Which of the following is a host-centric overlay solution for a modern data center?

- A. SPBM
- B. TRILL
- C. VxLAN
- D. VPLS

Correct Answer: C

Modern data center, traditional technologies are limiting the speed, flexibility, scalability, and manageability of application deployments. There is emerging interest in the industry in overlay technologies (such as

MPLS, VXLAN, LISP...)
