-  **800,000+** Satisfied Customers

QUESTION 1

Which Cisco WCS tool allows you to view current reports, open specific types of reports, create and save new reports, and manage scheduled runs?

- A. Reports menu
- B. Reports launch page
- C. Scheduled Run results
- D. saved reports

Correct Answer: B

The report launch pad provides access to all NCS reports from a single page. From this page, you can view current reports, open specific types of reports, create and save new reports, and manage scheduled runs. QUESTION 2

When adding a controller to manage through Cisco WCS, which address type is used and which SNMP function does the Cisco WCS perform?

- A. The controller is managed through its MAC address and the Cisco WCS acts as a SNMP TRAP authenticator.
- B. The IP address of the controller is used and the Cisco WCS acts as a SNMP TRAP receiver.
- C. The controller is managed through its MAC address and the Cisco WCS acts as a SNMP agent.
- D. The controller connects through its MAC address to the Cisco WCS and the Cisco WCS uses the SNMP to manage the controller for all configured SNMP parameters.

Correct Answer: B

QUESTION 3

Which two features are available in the Cisco WCS Plus license over the base license? (Choose two.)

- A. ad hoc rogue detection
- B. high availability between two Cisco WCS stations
- C. mobility service engine management
- D. auto discovery and containment or notification of rogue APs
- E. client location to the nearest AP

Correct Answer: BC

Cisco WCS PLUS license supports Cisco WCS base license features and the following capabilities: mobility services enablement and high availability. An older Cisco WCS Location license is forward compatible and equivalent to a PLUS license. When upgrading to this release, older Location licenses will appear as PLUS licenses. Older Enterprise licenses are also forward compatible and become PLUS licenses when loaded. The process to provision a Cisco WCS PLUS license is the same as provisioning a current Cisco WCS license.

QUESTION 4

Which type of authentication is used initially by a controller-based AP so that a guest client can get an IP address?

- A. 802.1x
- B. EAP
- C. LEAP
- D. open authentication
- E. TLS
- F. SSL

Correct Answer: D

Open authentication allows any device to authenticate and then attempt to communicate with the access point. Using open authentication, any wireless device can authenticate with the access point, but the device can communicate only if its Wired Equivalent Privacy (WEP) keys match the access point's WEP keys. Devices that are not using WEP do not attempt to authenticate with an access point that is using WEP. Open authentication does not rely on a RADIUS server on your network.

Reference: <http://www.cisco.com/c/en/us/td/docs/routers/access/wireless/software/guide/SecurityAuthenticationTypes.html#wp1035025>

QUESTION 5

A client is attached to the Cisco Unified Wireless Network using controllers. When the client is using WPA2 and EAP authentication, where are the wireless encryption keys located during the active user session? (Choose two.)

- A. on the access point
- B. on the RADIUS server
- C. on the Cisco WCS
- D. on the client
- E. on the Cisco WLC

Correct Answer: AD

During the Active user session, WEP keys can be located on the access point as well as on the client. Network managers need to provide end users with freedom and mobility without offering intruder's access to the WLAN or the information sent and received on the wireless network. With a WLAN, transmitted data is broadcast over the air using radio waves that travel between client devices, or stations, and access points-the WLAN endpoints on the Ethernet network that link stations to the network. This means that any WLAN client device within an access point service area can receive data transmitted to or from the access point.
