-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

### QUESTION 1

How many dBm is 40 mW?

- A. 10 dBm
- B. 16 dBm
- C. 20 dBm
- D. 22 dBm
- E. 40 dBm

Correct Answer: B

The dB measures the power of a signal as a function of its ratio to another standardized value. The abbreviation dB is often combined with other abbreviations in order to represent the values that are compared. Here are two examples:

dBm - The dB value is compared to 1 mW.

dBw - The dB value is compared to 1 W.

You can calculate the power in dBs from this formula:

$$\text{Power (in dB)} = 10 * \log_{10} (\text{Signal/Reference})$$

This list defines the terms in the formula:

log<sub>10</sub> is logarithm base 10.

Signal is the power of the signal (for example, 50 mW).

Reference is the reference power (for example, 1 mW).

Here is an example. If you want to calculate the power in dB of 50 mW, apply the formula in order to get:

$$\text{Power (in dB)} = 10 * \log_{10} (50/1) = 10 * \log_{10} (50) = 10 * 1.7 = 17 \text{ dBm}$$

Because decibels are ratios that compare two power levels, you can use simple math in order to manipulate the ratios for the design and assembly of networks. For example, you can apply this basic rule in order to calculate logarithms of

large numbers:

$$\log_{10} (A*B) = \log_{10}(A) + \log_{10}(B)$$

If you use the formula above, you can calculate the power of 50 mW in dBs in this way:

$$\text{Power (in dB)} = 10 * \log_{10} (50) = 10 * \log_{10} (5 * 10) = (10 * \log_{10} (5)) + (10 * \log_{10}(10)) = 7 + 10 = 17 \text{ dBm}$$

## QUESTION 2

Which Extensible Authentication Protocol types are supported by the Cisco Unified Wireless Network?

- A. EAP-TLS, PEAP-MSCHAPv2, and PEAP-GTC only
- B. LEAP and EAP-FAST only
- C. EAP-TLS, PEAP-MSCHAPv2, PEAP-GTC, LEAP, and EAP-FAST only
- D. any EAP supported by the RADIUS authentication server

Correct Answer: D

Extensible Authentication Protocol, or EAP, is an authentication framework frequently used in wireless networks and point-to-point connections. EAP is an authentication framework providing for the transport and usage of keying material and parameters generated by EAP methods. There are many methods defined by RFCs and a number of vendor specific methods and new proposals exist. EAP is not a wire protocol; instead it only defines message formats. Each protocol that uses EAP defines a way to encapsulate EAP messages within that protocol's messages.

## QUESTION 3

Which Cisco AnyConnect module allows you to set the parameters that are needed to connect to the wireless network?

- A. NAM
- B. DART
- C. posture
- D. telemetry

Correct Answer: A

The main components used in IUWNE are the Cisco AnyConnect Mobility Client itself, associated with the Network Access Module (NAM) used to manage existing profiles and provide the wireless connectivity. You also can click Advanced to open the NAM front end. You can then manage profiles (create, delete, reorder). The network administrator can restrict the types of networks that the end user can manipulate on the NAM.

## QUESTION 4

DRAG DROP

Drag the features on the left that use the "split MAC" model and drop them on the appropriate device on the right.

Select and Place:

Correct Answer:

QUESTION 5

**Instructions**

- THIS TASK DOES NOT REQUIRE DEVICE CONFIGURATION.
- To access the multiple-choice questions, click on the numbered boxes on the left of the top panel.
- There are **two** multiple-choice questions with this task. Be sure to answer both questions before selecting the Next button.

**Scenario**

A wireless LAN controller and AP are correctly configured. Verification is needed for the logging attributes while AP power adjustments are needed. Use the exhibits to resolve these issues.

WLC 802.11bgn AP

### 802.11b/g/n Cisco APs > Configure

**General**

AP Name	AP442b.036d.4d0f
Admin Status	Enable
Operational Status	UP
Slot #	0

**11n Parameters**

11n Supported	Yes
ClientLink	<input type="checkbox"/>

**CleanAir**

CleanAir Capable	No
CleanAir Admin Status	Disable

**Antenna Parameters**

Antenna Type	Internal
Antenna	A <input checked="" type="checkbox"/>
	B <input checked="" type="checkbox"/>
	C <input checked="" type="checkbox"/>

**RF Channel Assignment**

Current Channel	11
Channel Width	20 MHz
Assignment Method	Global

*Note: Only Channels 1, 6 and 11 are nonoverlapping*

**Tx Power Level Assignment**

Current Tx Power Level	5
Assignment Method	Custom

**Performance Profile**

View and edit Performance Profile for this AP

**Performance Profile**

*Note: Changing any of the parameters causes the RA temporarily disabled and thus may result in loss of connection for some clients.*

WLC 802.11an AP

### 802.11a/n Cisco APs > Configure

General		RF Channel Assignment	
AP Name	AP442b.036d.4d0f	Current Channel	149
Admin Status	Enable	Channel Width *	20 MHz
Operational Status	UP	* Channel width can be configured only when channel configuration mode	
Slot #	1	Assignment Method	Global

11n Parameters		Tx Power Level Assignment	
11n Supported	Yes	Current Tx Power Level	4
ClientLink	<input type="checkbox"/>	Assignment Method	Global

CleanAir		Performance Profile	
CleanAir Capable	No	View and edit Performance Profile for this AP	
CleanAir Admin Status	Disable	<b>Performance Profile</b>	

Antenna Parameters	
Antenna Type	Internal
Antenna	A <input checked="" type="checkbox"/>
	B <input checked="" type="checkbox"/>
	C <input checked="" type="checkbox"/>

Note: Changing any of the parameters causes the Radio to be temporarily disabled and thus may result in loss of connectivity for some clients.

Logging

MONITOR WLANs CONTROLLER WIRELESS SECURITY MANAGEMENT COMMANDS HELP FEEDBACK

### Syslog Configuration

File Info	<input checked="" type="checkbox"/>
Trace Info	<input checked="" type="checkbox"/>

What APTx Power Level Assignment would be required to increase power by 3 dBm on 2.4GHz radio?

- A. 1
- B. 2

- C. 3
- D. 4
- E. 5
- F. 6
- G. 7
- H. 8

Correct Answer: D

From the output, we can see the current power level setting for the 802.11 bgn (2.4Ghz tab) is set at 5. Based on the following table from Cisco, that would mean the output power is 3 mW:

Available Output Power Levels

Controller Tx Power Settings <sup>1</sup>	Radio Output Power	
	802.11b (mW)	802.11g (mW)
1 (maximum) <sup>2</sup>	50	30
2	25	15
3	12	8
4	6	4
5	3	2
6	2	1
7	-1	-
8		-

Lead4Pass.com

Here is the power conversion table to go from mW to 3bm:

Power Conversion Table

mW	dBm	mW	dBm	mW	dBm
200	23	40	16	8	9
150	22	30	15	6	8
125	21	25	14	5	7
100	20	20	13	4	6
80	19	15	12	3	5
60	18	12	11	2	2
50	17	10	10	1	-1

Lead4Pass.com

So, with a power level setting of 5, the output power is 3mW, or 5 dbm. A power level of 4 would increase it to 6mW, or 8 dbm.
