### QUESTION 1

Which EAP protocol requires a certificate only on the server side?

- A. EAP-PEAP
- B. EAP-FAST
- C. EAP-TLS
- D. EAP-SSL

Correct Answer: A

PEAP is not an encryption protocol; as with other EAP types it only authenticates a client into a network. PEAP uses only server-side public key certificates to authenticate clients by creating an encrypted SSL/TLS tunnel between the client and the authentication server, which protects the ensuing exchange of authentication information from casual inspection.

### QUESTION 2

In a typical wireless network using WPA, WPA2 or VPN, why is it still possible for a rogue client to launch a DOS attack?

- A. WPA and WPA2 are not considered strong encryption algorithms and are easily cracked.
- B. 802.11 management frames are easily compromised.
- C. Cisco Compatible Extensions v5 are required with WPA, WPA2, or VPN to keep rogues from launching attacks in the wireless network.
- D. The message integrity check frames are never encrypted or authenticated, which allows rogues to spoof clients.

Correct Answer: B

Another form of basic security now available is WPA or WPA2 Pre-Shared Key (PSK). The PSK verifies users via a password, or identifying code, (also called a passphrase) on both the client station and the access point. A client may only gain access to the network if the client's password matches the access point's password. The PSK also provides keying material that TKIP or AES use to generate an encryption key for each packet of transmitted data. While more secure than static WEP, PSK is similar to static WEP in that the PSK is stored on the client station and can be compromised if the client station is lost or stolen. A strong PSK passphrase that uses a mixture of letters, numbers, and non-alphanumeric characters is recommended.

### QUESTION 3

DRAG DROP

Drag the correct visual description from the left to the matching Windows 7 wireless client description on the right.

Select and Place:

three boxes with gold shield	Open BSS
three boxes without gold shield	Secure BSS
three boxes with gold star	Open IBSS
three boxes without gold star	Secure IBSS
five bars with shield	
five bars without shield	
five bars with gold star	
five bars without gold star	

Correct Answer:

	five bars with shield
	five bars without shield
three boxes with gold star	three boxes with gold shield
three boxes without gold star	three boxes without gold shield
five bars with gold star	
five bars without gold star	

#### QUESTION 4

A WLAN deployment uses a combination of Cisco Aironet 1260 APs and multiple Cisco 5500 Wireless LAN Controllers to provide wireless LAN access to end- users. The network administrator has decided to use DHCP Option 43 to enable the APs to discover the wireless LAN controllers.

When configuring the DHCP scope, which format should be used for the Cisco WLC addresses?

- A. a comma-separated ASCII string of Cisco WLC AP-manager addresses
- B. a comma-separated ASCII string of Cisco WLC management addresses
- C. a comma-separated ASCII string of Cisco WLC virtual IP addresses
- D. a hexadecimal string of Cisco WLC AP-manager addresses
- E. a hexadecimal string of Cisco WLC management addresses
- F. a hexadecimal string of Cisco WLC virtual IP addresses

Correct Answer: E

Complete these steps in order to configure DHCP Option 43, in the embedded Cisco IOS DHCP server, for all Cisco Aironet APs that run Cisco IOS. This includes all APs except for the VxWorks 1000 Series (see the next section) and the 600 Series OEAP which does not use Option 43.

1.

Enter configuration mode at the Cisco IOS CLI.

2.

Create the DHCP pool, which includes the necessary parameters such as the default router and server name. This is an example DHCP scope:

```
ip dhcp pool
```

```
network
```

```
default-router
```

```
dns-server
```

3.

Add the Option 43 line with this syntax:

```
option 43 hex
```

The hexadecimal string in step 3 is assembled as a sequence of the TLV values for the Option 43 suboption: Type + Length + Value. Type is always the suboption code 0xf1. Length is the number of controller management IP addresses times

4 in hex. Value is the IP address of the controller listed sequentially in hex. Reference:

<http://www.cisco.com/c/en/us/support/docs/wireless-mobility/wireless-lan-wlan/97066-dhcp-option-43-00.html>

## QUESTION 5

Which Cisco AnyConnect module allows troubleshooting for core Cisco AnyConnect problems?

- A. telemetry
- B. web security

- C. VPN
- D. NAM
- E. DART
- F. posture
- G. CSSC

Correct Answer: E

AnyConnect offers the DART module that can be used to analyze and troubleshoot connections. The information collected by DART can be examined locally or exported and sent to a network support desk for analysis.
