QUESTION 4

You have configured two SSL VPN certificate-to-connection profile mappings for all users and Sales users. The connection profiles for the Sales users are not being applied when the users connect. Based on the configuration that is shown, what would cause this issue?

- A. The priority of the RASSL4SALES mapping is too high and needs to be lower than the priority of the RASSL4ALL

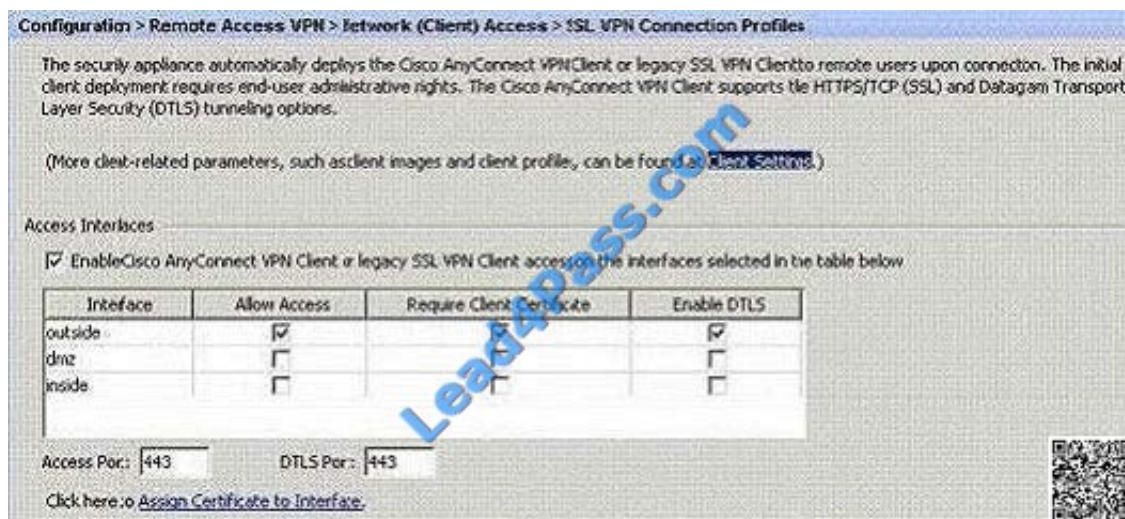

mapping.

- B. The priority of the RASSL4ALL mapping is too low and it needs to be increase but not more than the priority of the RASSL4SALES mapping.
- C. The priority of the RASSL4ALL mapping is not low enough and it needs to be lowered to 1.
- D. The matching criteria for the RASSL4SALES mapping is too specific and should match something more generic.

Correct Answer: A

QUESTION 5

You work as a network administrator for your company. Study the exhibit carefully. ASDM is short for Adaptive Security Device Manager. You are responsible for multiple remote Cisco ASA security appliances administered through Cisco ASDM. Recently, you have been tasked to configure one of these Cisco ASA security appliances for SSL VPNs and are requiring a client certificate, as shown. How will this configuration affect your next ASDM connection to this Cisco ASA security appliance?

- A. You would be asked to present an identity certificate. If you did not have one, the Cisco ASA security appliance would prompt you for authentication credentials, consisting of a username and password.
- B. Your connection would be handled the way it is always handled by this Cisco ASA security appliance.
- C. You would be required to have an identity certificate that the Cisco ASA security appliance can use for authentication.
- D. You would be required to download the identity certificate of the remote Cisco ASA security appliance.
