Following Questions and Answers are all new published by Cisco
Official Exam Center

QUESTION 1

Which three are logistical issues that need to be taken into consideration prior to performing a site survey? (Choose three.)

A. What level of client density and throughput is expected for each WLAN cell?

B. Will security clearances be required to perform the site survey?

C. How much time will be required to survey each potential AP location?

D. Will contractor badges and employee or union escorts be required while performing the site survey?

E. Is access available to customer employees so initial interviews can be performed?

F. Will any facility orientation be required prior to performing the site survey?

Correct Answer: BDF

QUESTION 2

When performing a site survey, what is a typical usable range for client signal strength?

A. -70 to -90 dBm

B. -60 to -80 dBm

C. -45 to -65 dBm

D. -30 to -50 dBm

Correct Answer: B

QUESTION 3

When planning a site survey, what Cisco tool can an engineer use to estimate the number of required APs?

A. MSE Location Tracking

B. WCS Planning Mode

C. WLC NetFlow Exporter

D. LWAP Monitor Mode

E. WCS Map Editor

Correct Answer: B

QUESTION 4

A customer is experiencing slower client data throughput than the data rate setting. Which two wireless characteristics are the primary contributing factors? (Choose two.)

A. Broadcast and multicast are sent at the lowest associated data rate.

B. 802.11 acknowledges all packets, which halves throughput on the channel.

C. Clients that are farther from the access point connect at a slower data rate.

D. Lower data rates decrease overall throughput.

E. All clients on a given access point share the bandwidth of the channel.

F. Overlapping channels cause co-channel interference.

Correct Answer: BE

QUESTION 5

During the site survey kick-off meeting with your customer, they ask why you need to verify the existing network infrastructure. Which two reasons do you give them? (Choose two.)

A. You need to verify the make, model, and software versions of all the equipment that will connect to the WLAN components in order to ensure compatibility.

B. You need to verify that the equipment the WLAN components will connect to has sufficient memory capacity to support the additional WLAN connections.

C. You need to verify that there are sufficient switch ports to support the new WLAN connections.

D. You need to verify that the switches the WLAN components will connect to can supply 802.3af inline power, and that they have sufficient ports to support all the new WLAN devices.

E. Depending on the type of APs that are planned for, the deployment may require different types of PoE to be supplied by the LAB switches.

Correct Answer: CD
