QUESTION 1

What are the three potential use cases of NetFlow in an actual network deployment? (Choose three.)

- A. identifying the traffic source and destination for optimizing peering and transit links
- B. providing the network telemetry for identifying and mitigating DDoS attacks
- C. providing traffic traces that are comparable to what is provided by a packet sniffer and RMON
- D. providing a means for traffic accounting and billing for customers
- E. providing deep application inspections and controls

Correct Answer: ABD

QUESTION 2

Instructions

Enter the proper CLI commands and analysis the outputs on the Cisco routers to answer the multiple-choice questions.

From the network topology diagram, click on the router icon to gain access to the console of the router.

No console or enable passwords are required.

There are four multiple-choice questions with this task. Be sure to answer all four questions before selecting the Next button.

Not all the CLI commands or commands options are supported or required for this simulation.

For example, the show running-config command is **NOT** supported in this simulation.

All the devices in this simulation have been pre-configured and you are not required to enter in any configurations.

Scenario

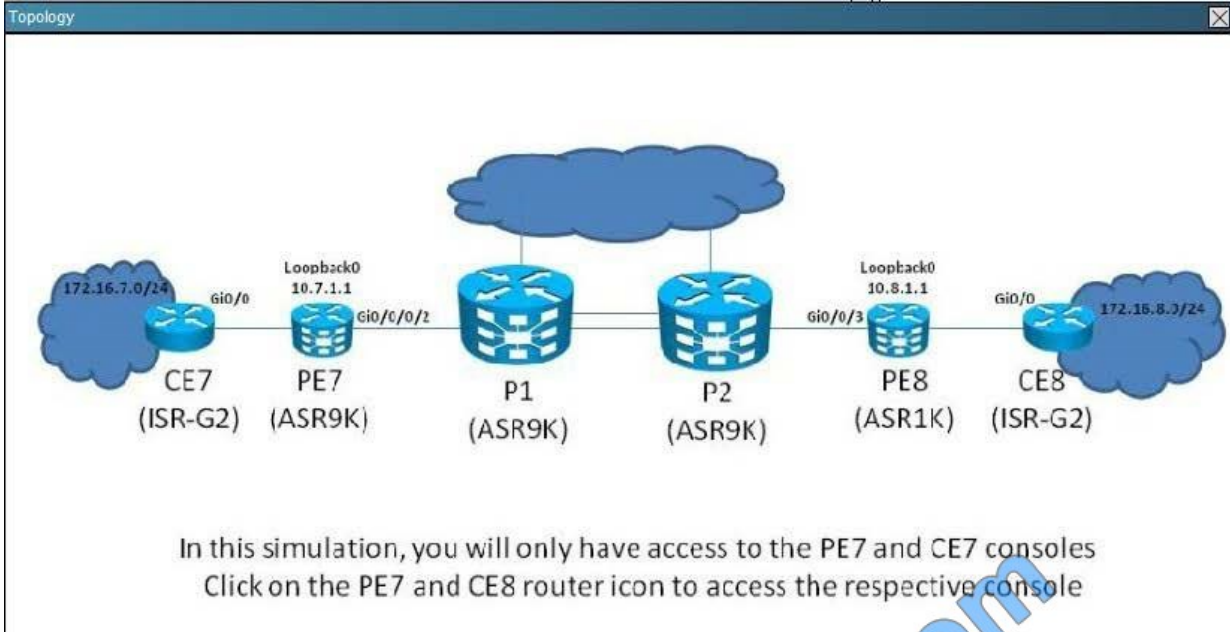

Referring to the network topology diagram shown in the exhibit, use the proper CLI commands on the CE7 and PE7 routers and interpret the supported CLI commands outputs to answer the four multiple choice questions.

The CE7 router is an ISR-G2 router and the PE7 router is an ASR9K router.

OSPF is the IGP running between all the PE and P routers.

LDP is running between all the PE and P routers.

CE7 and CE8 connectivity has been successfully established over the layer 3 MPLS VPN configurations on the PE7 and PE8 routers.
