QUESTION 1

DRAG DROP

Your network contains a System Center 2012 R2 Configuration Manager Service Pack 1 (SPI) environment.

Your company has a finance department that contains 100 client computers. Only some of the client computers have the Microsoft Application Virtualization (App-V) client installed.

You have a new application named App1.

You need to deploy App1 to all of the users in the finance department.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions

- Distribute the content to distribution points.
- Configure the App-V client as a requirement of App1.
- Create App1 as a new application.
- Create App1 as a new package in the software library.
- Create a new deployment for App1 and set the deployment to **Required**.
- Create the App-V client as a new application in the software library.

Answer Area

Correct Answer:

Actions

- Empty box
- Empty box
- Create App1 as a new application.
- Create App1 as a new package in the software library.
- Empty box
- Create the App-V client as a new application in the software library.

Answer Area

- Configure the App-V client as a requirement of App1.
 - Create a new deployment for App1 and set the deployment to **Required**.
 - Distribute the content to distribution points.

QUESTION 2

DRAG DROP

Your company has two offices named Office1 and Office2.

You plan to deploy a System Center 2012 R2 Configuration Manager Service Pack 1 (SP1) Central Administrative site to Office1 and a primary site to Office2.

You need to identify which firewall ports you must allow between Office1 and Office2 for inter-site communication.

Which firewall ports should you identify? To answer, drag the appropriate ports to the correct locations. Each port may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Select and Place:

Ports

80	443	445	1433	4022	8530	8531
----	-----	-----	------	------	------	------

Answer Area

Port to allow file-based replication: Port

Ports to allow database replication: Port Port

Correct Answer:

Ports

80	443				8530	8531
----	-----	--	--	--	------	------

Answer Area

Port to allow file-based replication: 445

Ports to allow database replication: 4022 1433

*

File-based communication between sites uses the Server Message Block (SMB) protocol by using TCP/IP port 445.

*

To replicate data between sites, Configuration Manager uses its own database replication service. The database replication service uses SQL Server change tracking to monitor the local site database for changes, and then replicates those changes to other sites by using a SQL Server Service Broker. By default, this process uses the TCP/IP port 4022.

*

Intrasite communication between the SQL Server database engine and various Configuration Manager site system roles by default use port TCP 1433.

QUESTION 3

HOTSPOT

You have a System Center 2012 R2 Configuration Manager Service Pack 1 (SP1) standalone primary site.

You have a Configuration Manager application named App1 and a Configuration Manager package named Package1.

You need to ensure that App1 and Package1 are deployed only to Windows 8 computers.

In the table below, identify what to configure for App1 and Package1.

NOTE: Make only one selection in each column.

Hot Area:

Answer Area

Configuration	App1	Package1
Deployment type requirements	<input type="radio"/>	<input type="radio"/>
Distribution settings	<input type="radio"/>	<input type="radio"/>
Program advanced settings	<input type="radio"/>	<input type="radio"/>
Program requirements	<input type="radio"/>	<input type="radio"/>

Correct Answer:

Answer Area

Configuration	App1	Package1
Deployment type requirements	<input type="radio"/>	<input type="radio"/>
Distribution settings	<input type="radio"/>	<input type="radio"/>
Program advanced settings	<input type="radio"/>	<input type="radio"/>
Program requirements	<input checked="" type="radio"/>	<input checked="" type="radio"/>

QUESTION 4

DRAG DROP

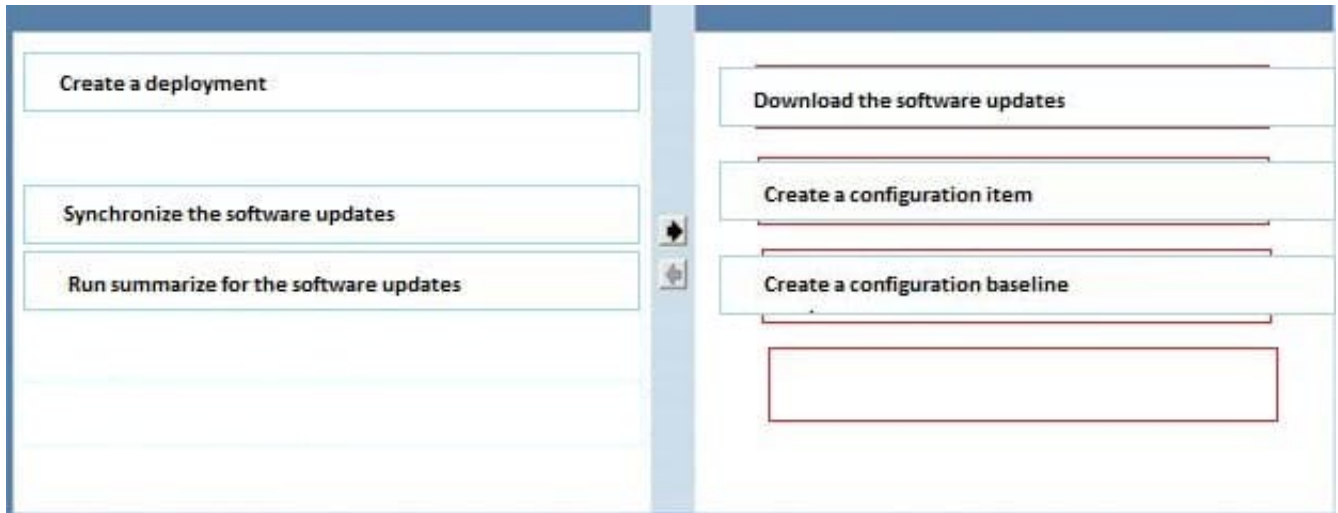

You manage a system Centre 2012 R2 Configuration Manager Service Pack1 (SP1) standalone primary site that contains a software update point. You need to implement a configuration baseline that will contain a software updates configuration item.

Which three actions should you perform in sequence?

Select and Place:

The screenshot shows the Configuration Manager console interface. On the left, there is a list of actions: 'Create a deployment', 'Download the software updates', 'Synchronize the software updates', 'Run summarize for the software updates', 'Create a configuration baseline', and 'Create a configuration item'. On the right, there are five empty rectangular boxes for placing the selected actions in sequence.

Correct Answer:

QUESTION 5

DRAG DROP

Your network contains a single Active Directory domain named contoso.com. System Center 2012 R2 Configuration Manager Service Pack 1 (SP1) is deployed to contoso.com.

You have a Windows 8.1 operating system image named Image1 in Configuration Manager. Image1 has the data source of \\server1.contoso.com\source\Image1.wim. New client computers are deployed by using Image1.

You have an application named App1.exe. App1 is a configuration utility that does not require installation.

You need to ensure that App1.exe is included in all future deployments of Image1.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions

Answer Area

- Copy App1.exe
- Refresh Image1.
- Capture an image.
- Mount Image1.wim.
- Unmount Image1.wim.
- Schedule updates for Image1.
- Distribute the image to distribution points.

Correct Answer:

Actions

Refresh Image1.	
Capture an image.	
Schedule updates for Image1.	

Answer Area

	Mount Image1.wim.	
	Copy App1.exe	
➤	Unmount Image1.wim.	⬆
⬅	Distribute the image to distribution points.	⬇
