QUESTION 1

HOTSPOT

You have a System Center 2012 R2 Configuration Manager Service Pack 1 (SP1) deployment.

You have two domain users named User1 and User2.

The users will perform the following administrative tasks:

- User1 will create device collections.
- User2 will create and deploy configuration baselines.

You need to identify to which security role each user must be added. The solution must use the principle of least privilege. Which security roles should you identify? To answer, select the appropriate options in the answer area.

Hot Area:

Answer Area

Option

User1:

| Application Author |
| Asset Manager |
| Company Resource Access Manager |
| Operations Administrator |

User2:

| Application Deployment Manager |
| Company Resource Access Manager |
| Asset Manager |
| Compliance Settings Manager |
| Security Administrator |

Correct Answer:

Answer Area

Option

User1:

Application Author
Asset Manager
Company Resource Access Manager
Operations Administrator

User2:

Application Deployment Manager
Company Resource Access Manager
Asset Manager
Compliance Settings Manager
Security Administrator

QUESTION 2

DRAG DROP

Your network contains a System Center 2012 R2 Configuration Manager Service Pack 1 (SP1) environment.

You create a collection named All Managed Servers.

You need to inventory the environment variables of the All Managed Servers collection.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Create a custom client user setting named Env.	
Create a custom client device setting named Env.	
Deploy the Env custom setting to the All Managed Servers collection.	➡
In the Env custom setting, select **User Device Affinity**.	⬅
In the Envcustom setting, select **Hardware Inventory**.	
In the Envcustom setting, select **Desktop (Win32_Desktop)**.	
In the Envcustom setting, select **Environment (Win32_Environment)**.	

Correct Answer:

| Create a custom client user setting named Env. | Create a custom client device setting named Env. |
	In the Envcustom setting, select **Hardware Inventory**.
	In the Envcustom setting, select **Environment (Win32_Environment)**.
In the Env custom setting, select **User Device Affinity**.	Deploy the Env custom setting to the All Managed Servers collection.
In the Envcustom setting, select **Desktop (Win32_Desktop)**.	

* Win32_Environment class (Windows)

TheWin32_Environment WMI class represents an environment or system environment setting on a Windows computer system. Querying this class returns environment variables found in:

HKEY_LOCAL_MACHINE\System\CurrentControlSet\Control\Sessionmanager\Environment

And HKEY_USERS\\Environment

Since we need to inventory WMI information, that means we need Hardware Inventory and you can only do that with a Custom Client Device Setting:
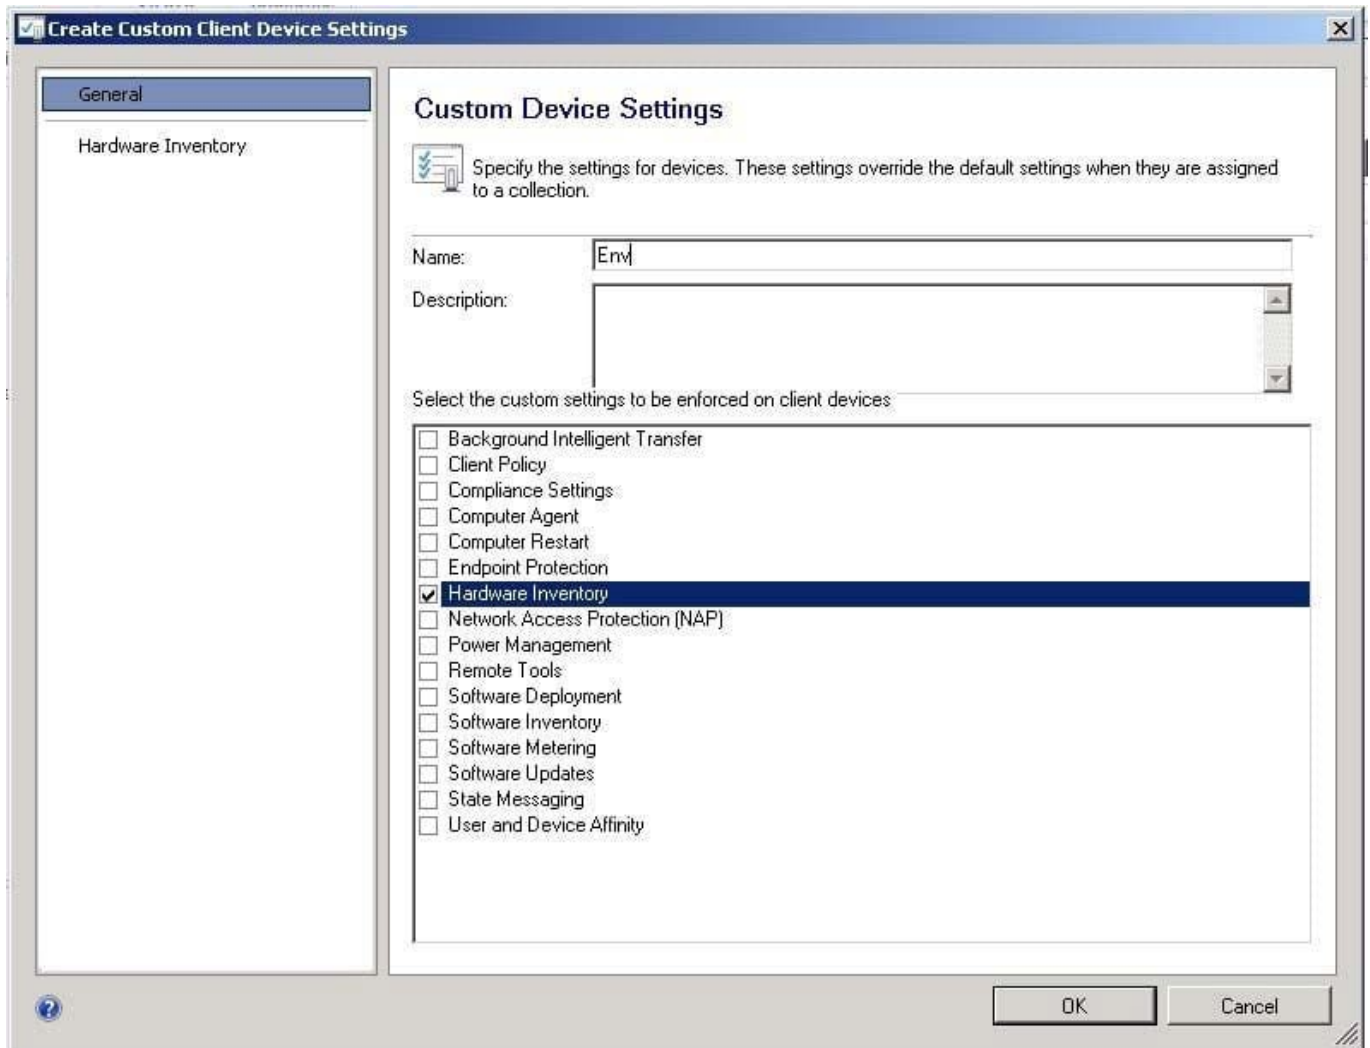

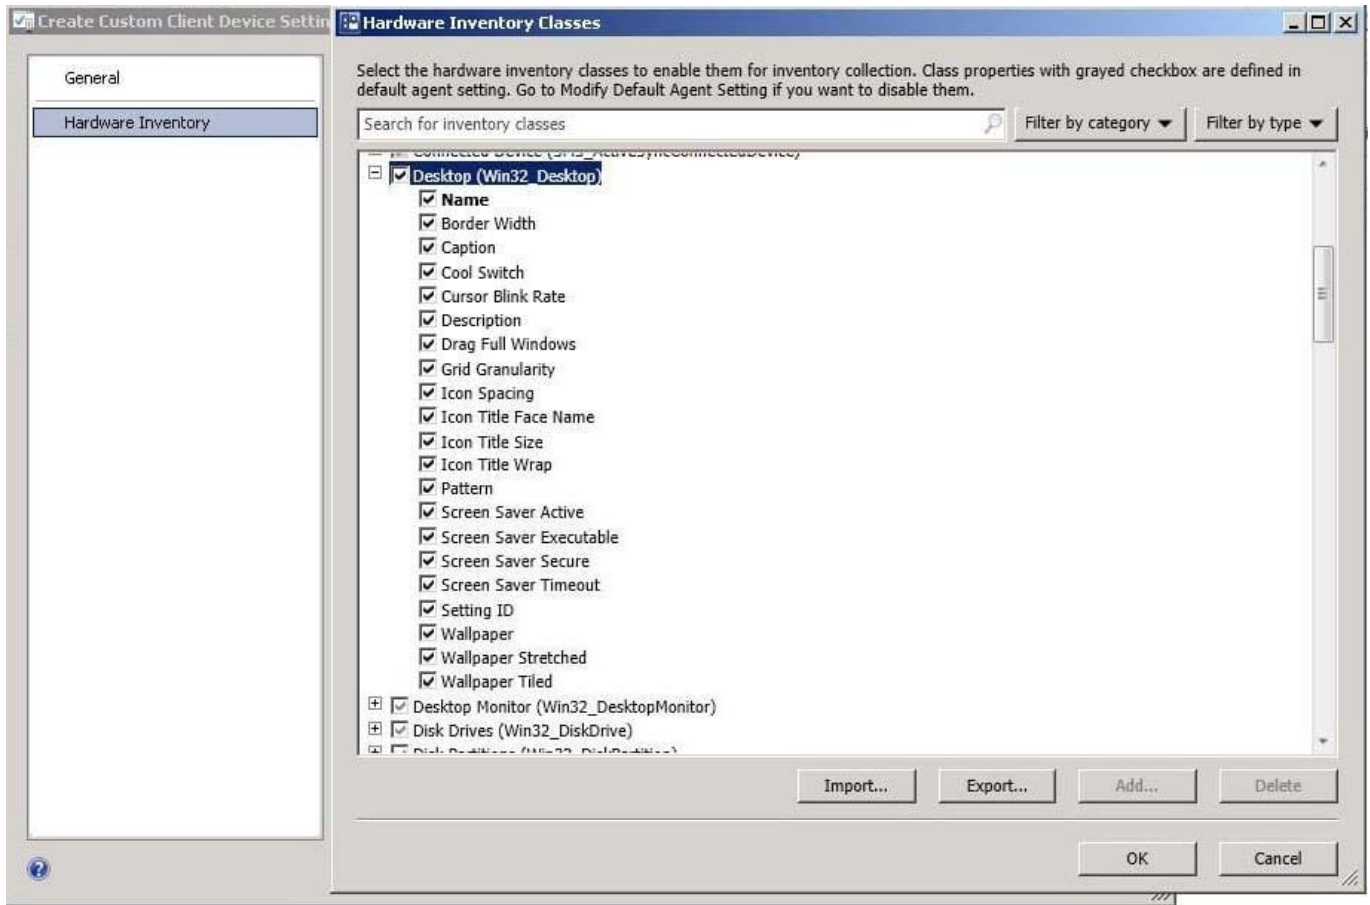

QUESTION 3

DRAG DROP

Your company has two offices named Office1 and Office2.

You plan to deploy a System Center 2012 R2 Configuration Manager Service Pack 1 (SP1) Central Administrative site to Office1 and a primary site to Office2.

You need to identify which firewall ports you must allow between Office1 and Office2 for inter-site communication.

Which firewall ports should you identify? To answer, drag the appropriate ports to the correct locations. Each port may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Select and Place:

Correct Answer:

Ports					Answer Area
80	443		8530	8531	

Port to allow file-based replication: 445

Ports to allow database replication: 4022   1433

*

  File-based communication between sites uses the Server Message Block (SMB) protocol by using TCP/IP port 445.

*

  To replicate data between sites, Configuration Manager uses its own database replication service. The database replication service uses SQL Server change trackingto monitor the local site database for changes, and then replicates those changes to other sites by using a SQL Server Service Broker. By default, this process uses the TCP/IP port 4022.

*

  Intrasite communication between the SQL Server database engine andvarious Configuration Manager site system roles by default use port TCP 1433.

QUESTION 4

HOTSPOT

You have an Active Directory domain named contoso.com. The domain contains three servers named Server1, Server2, and Server3 that run Windows Server 2012 R2. Server1 is a System Center 2012 R2 Configuration Manager Service

Pack 1 (SP1) primary site server.

You plan to install a primary site on Server2.

You need to ensure that Configuration Manager is managed centrally. The solution must minimize administrative effort.

What should you do before you deploy the primary site to Server2? To answer, select the appropriate options in the answer area.

Hot Area:

Answer Area

Component to install on Server3:

	▼
The Central Administration site	
The primary site	
The secondary site	

Component to remove from Server1:

	▼
Configuration Manager 2012 R2 Service Pack 1 (SP1)	
A distribution point	
An Endpoint Protection point	
A management point	

Correct Answer:

Answer Area

Component to install on Server3:

	▼
The Central Administration site	
The primary site	
The secondary site	

Component to remove from Server1:

	▼
Configuration Manager 2012 R2 Service Pack 1 (SP1)	
A distribution point	
An Endpoint Protection point	
A management point	

QUESTION 5

HOTSPOT

You have a System Center 2012 R2 Configuration Manager Service Pack 1 (SP1) deployment.

You use Configuration Manager to deploy Windows 8.1 to client computers.

You need to encrypt the contents of the operating system volume during the operating system deployment and to store recovery keys in Active Directory. The solution must minimize the amount of time required to deploy the operating system.

Which task sequence steps should you use to perform each task? To answer, select the appropriate options in the answer area.

Hot Area:

Answer Area

Encrypt the drive: ▼

Enable BilLocker
Pre-provision BitLocker

Store the recovery key: ▼

Enable BilLocker
Capture the Windows settings
Pre-provision BitLocker

Correct Answer:

Answer Area

Encrypt the drive: ▼

Enable BilLocker
Pre-provision BitLocker

Store the recovery key: ▼

Enable BilLocker
Capture the Windows settings
Pre-provision BitLocker

*

 Pre-provision BitLocker

This step enables BitLocker on adrive while in Windows PE. Only the used drive space is encrypted. Because you partitioned and formatted the hard drive in the previous step, there is no data, andencryption completes very quickly.

*

 Enable BitLocker

This step enables BitLocker encryption on the hard drive and sets key protectors. Because the hard drive was pre-provisioned with BitLocker, this step completes very quickly.

Windows 7/8/10 requires that you add a key protector.

Note: The Pre-provision BitLocker task sequence step in Microsoft System Center 2012 Configuration Manager allows you to enable BitLocker from the Windows Preinstallation Environment (Windows PE) prior to operating system

deployment. Only the used drive space is encrypted, and therefore, encryption times are much faster.
