QUESTION 1

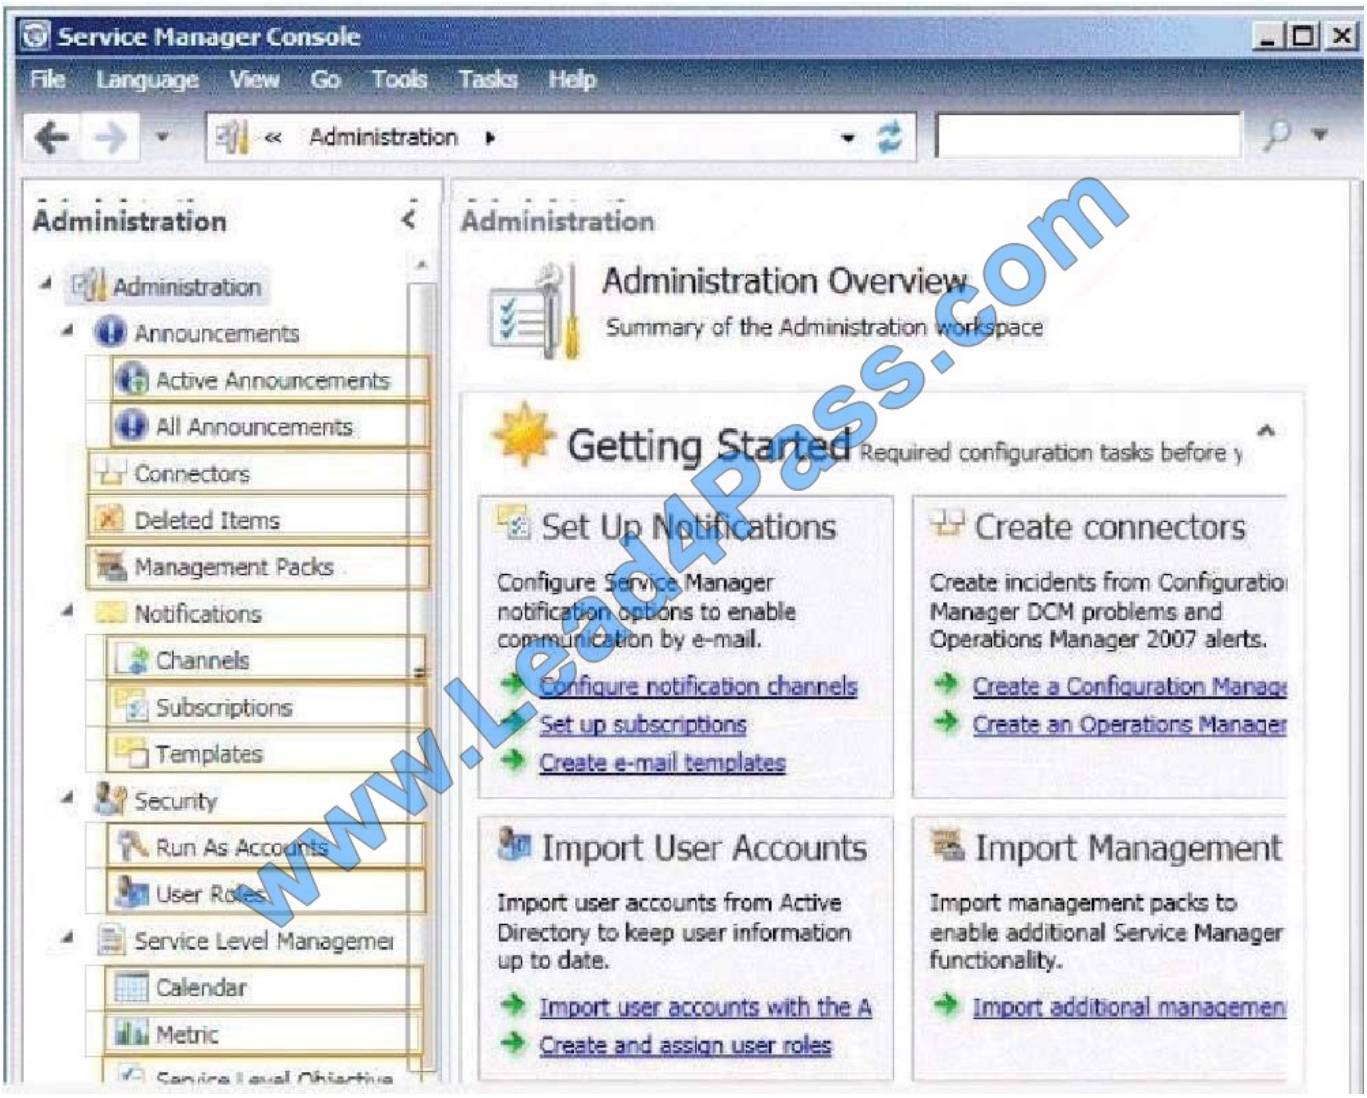
Your company uses System Center 2012 Service Manager to manage and track problems.

You need to ensure that a user named Admin1 is notified automatically when an incident is updated.

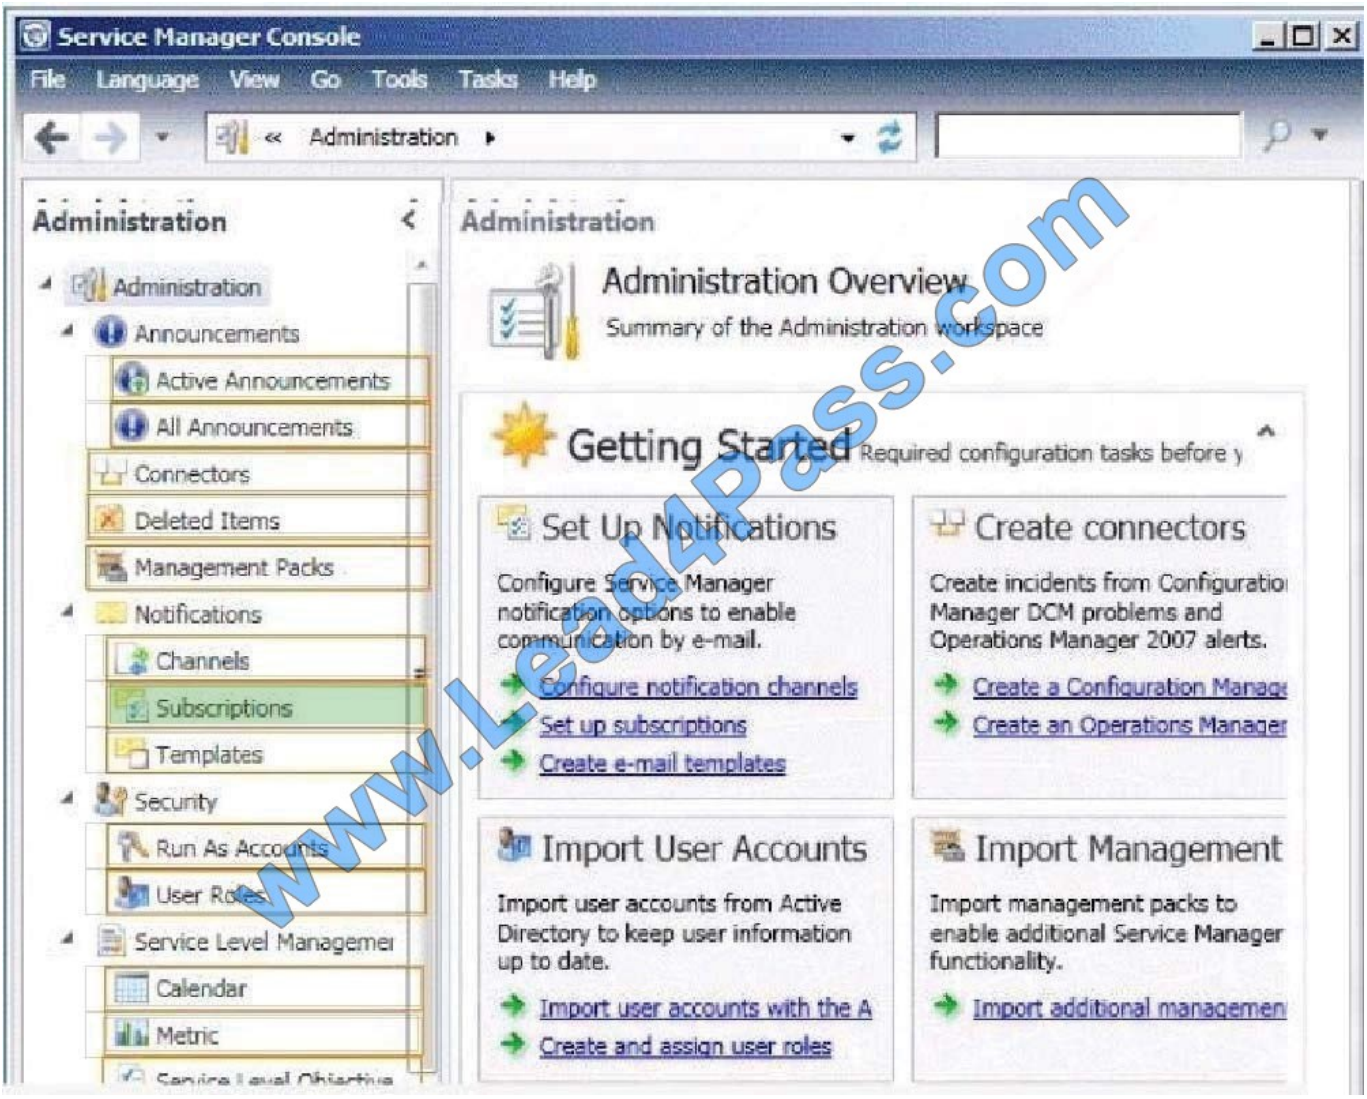
What should you configure?

To answer, select the appropriate category in the answer area.

Hot Area:



Correct Answer:



www.Lead4Pass.com

QUESTION 2

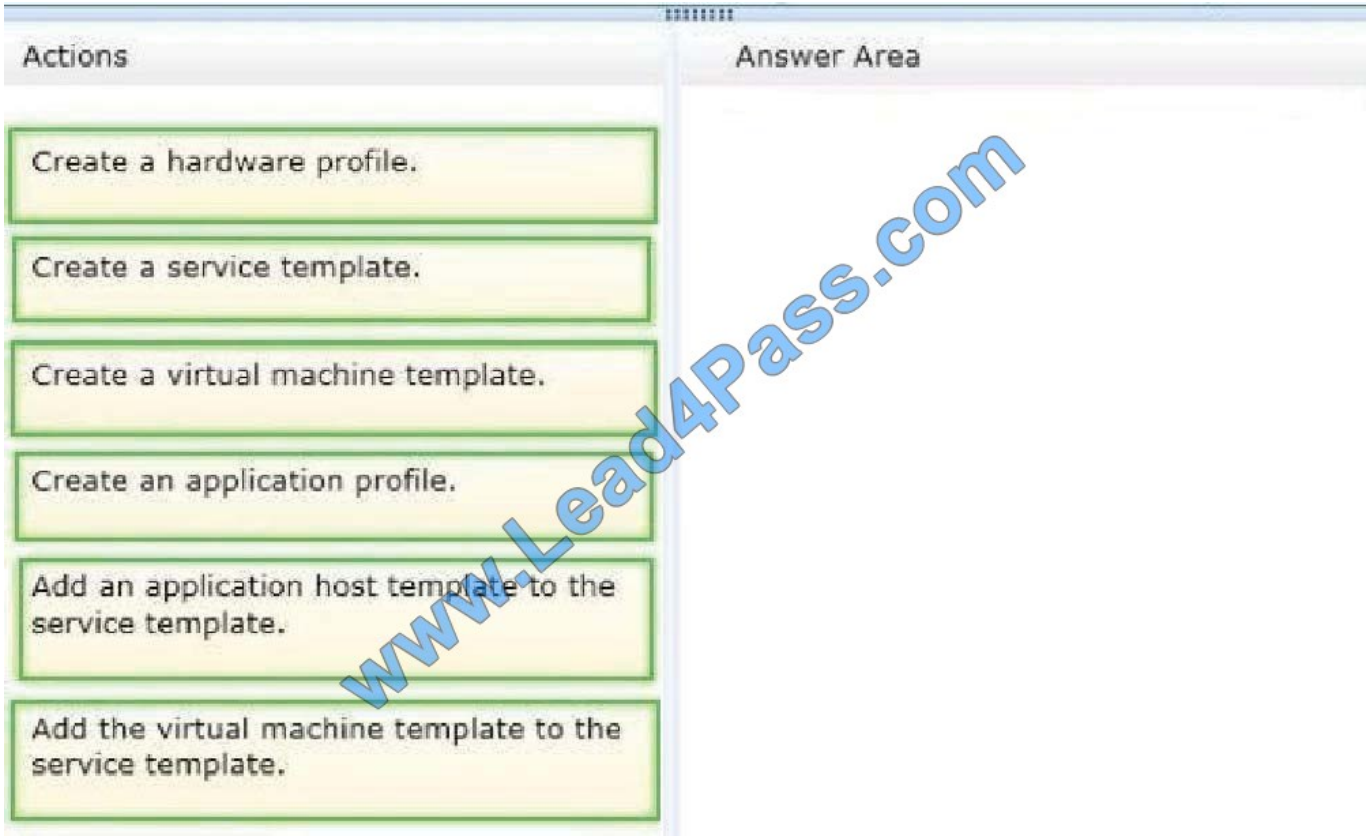
You are evaluating the implementation of additional servers to host App2.

You need to prepare the new servers to meet technical requirements for App2.

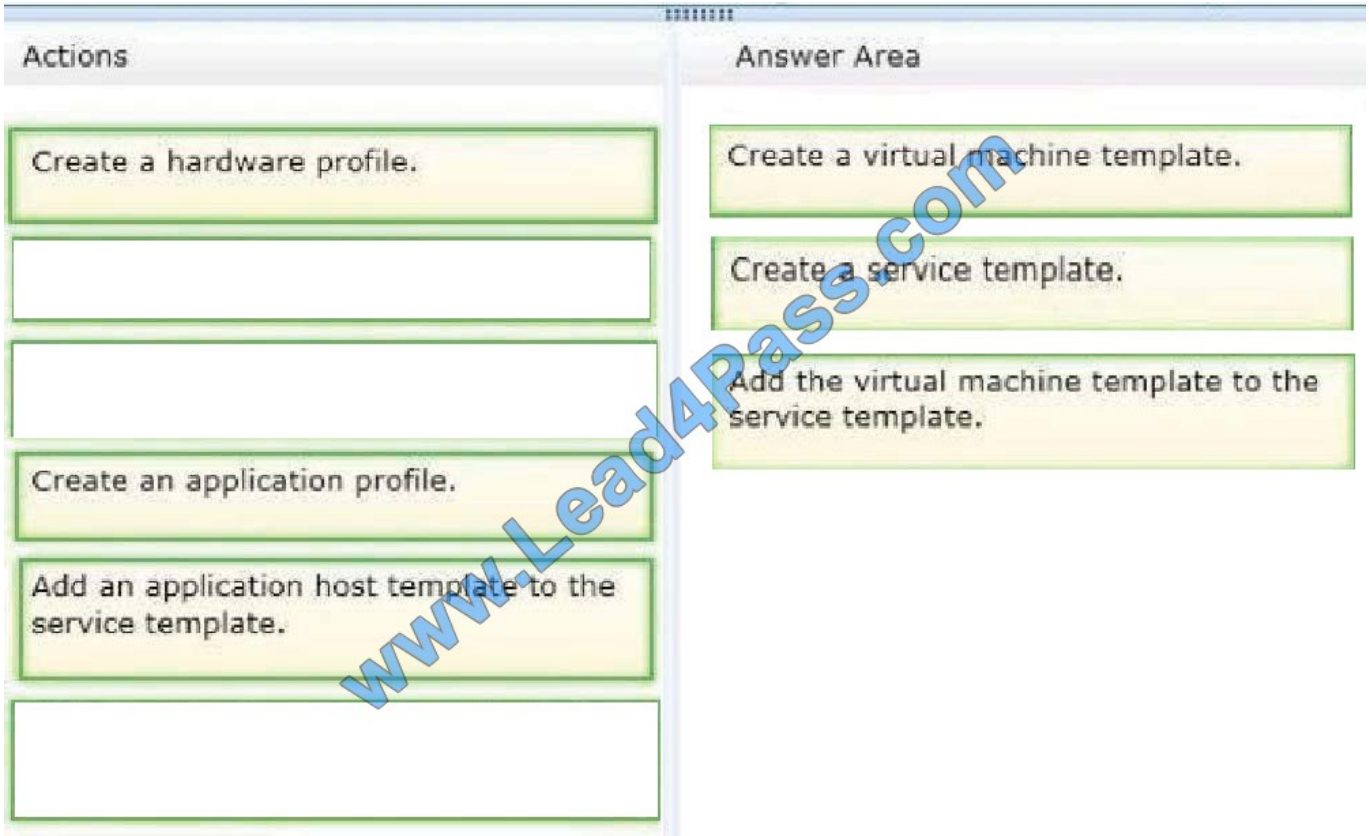
Which three actions should you recommend performing in sequence?

(To answer, move the appropriate three actions from the list of actions to the answer area and arrange them in the correct order.)

Select and Place:



Correct Answer:



www.Lead4Pass.com

QUESTION 3

Your company has a private cloud that is managed by using a System Center 2012 Operations Manager infrastructure.

You have a distributed application named App1. App1 has the following service level objectives (SLOs):

At least 99.9 percent uptime

No more than 85 percent average CPU utilization

You need to add the SLOs that monitor the required information to Service Level Tracking.

Which SLO or SLOs should you add? (Each correct answer presents part of the solution. Choose all that apply.)

A. Monitor state SLO - Availability

B. Monitor state SLO - Security

C. Collection rule SLO

D. Monitor state SLO - Performance

E. Monitor state SLO - Configuration

Correct Answer: AC

http://technet.microsoft.com/en-us/library/hh230719.aspx

To define a service level objective for an application Open the Operations console with an account that is a member of the Operations Manager Administrators user role.

Click Authoring.

In the navigation pane, expand Management Pack Objects, and then click Service Level Tracking.

In the Tasks pane, click Create.

In the Service Level Tracking dialog box, type a name for the service level that you are defining. For example, type LOB Application 1. Optionally, you can provide a description. Click Next. On the Objects to Track page, under Targeted class,

click Select.

In the Select a Target Class dialog box, select a class for the service level, such as Distributed Application, from the list in the text box. You can search for a class by typing its name into the Look For text box. Click OK to close the Select a

Target dialog box. You can use the Scope option to specify the scope for the service level. The default selection is to use all objects of the targeted class.

Select the management pack that this service level will be saved in. You can use an existing management pack or create a new one.

Click Next.

On the Service Level Objectives page, click Add, and then click Monitor state SLO to create a new monitor.

This monitor will track the availability of the application.

Define the state monitor as follows:

In the Service level objective name text box, type a name for the service level objective. For this scenario, type Availability.

From the Monitor drop-down list, choose the specific monitor that you want to use to measure the objective. For this scenario, choose Availability. Using the Service level objective goal (%) spin box, provide the numerical measure for your

objective. For example, select 99.990 to indicate that your goal is 99.99% availability. You can refine what the monitor tracks to determine availability by selecting or clearing any of the following state criteria:

Unplanned maintenance

Unmonitored

Monitoring unavailable

Monitor disabled

Planned maintenance

Warning

Click OK.

On the Service Level Objectives page, click Add, and then click Collection rule SLO to create a new collection rule. This rule will track the performance of the application Define the performance collection rule as follows:

In the Service level objective name: text box, type a name for the service level objective. For this scenario, type Performance. Under Targeted class, click Select to open the Select a Target Class dialog box. Specify the target class for the rule

from the list of targets in the text box. Note that this class must be contained in the distributed application.

For this scenario, select the specific class the rule is targeted to, such as Windows Server 2008 Operating System.

Under Performance collection rule, click Select to open the Select a Rule dialog box. Specify the performance collection rule to use. For this scenario, choose Collect Processor\ % Processor Time performance counter, and then click OK.

Using one of the Aggregation method options, choose one of the following:

Average

Min

Max

Use the Service level objective goal drop-down list to specify either Less than or More than, and enter a value in the adjacent text box. For this scenario, choose Less Than and 80. This indicates that the performance goal is to never exceed

80% processor time.

Click OK.

On the Service Level Objectives page, click Next.

On the Summary page, review the settings, and then click Finish.

When the Completion page appears, click Close.

QUESTION 4

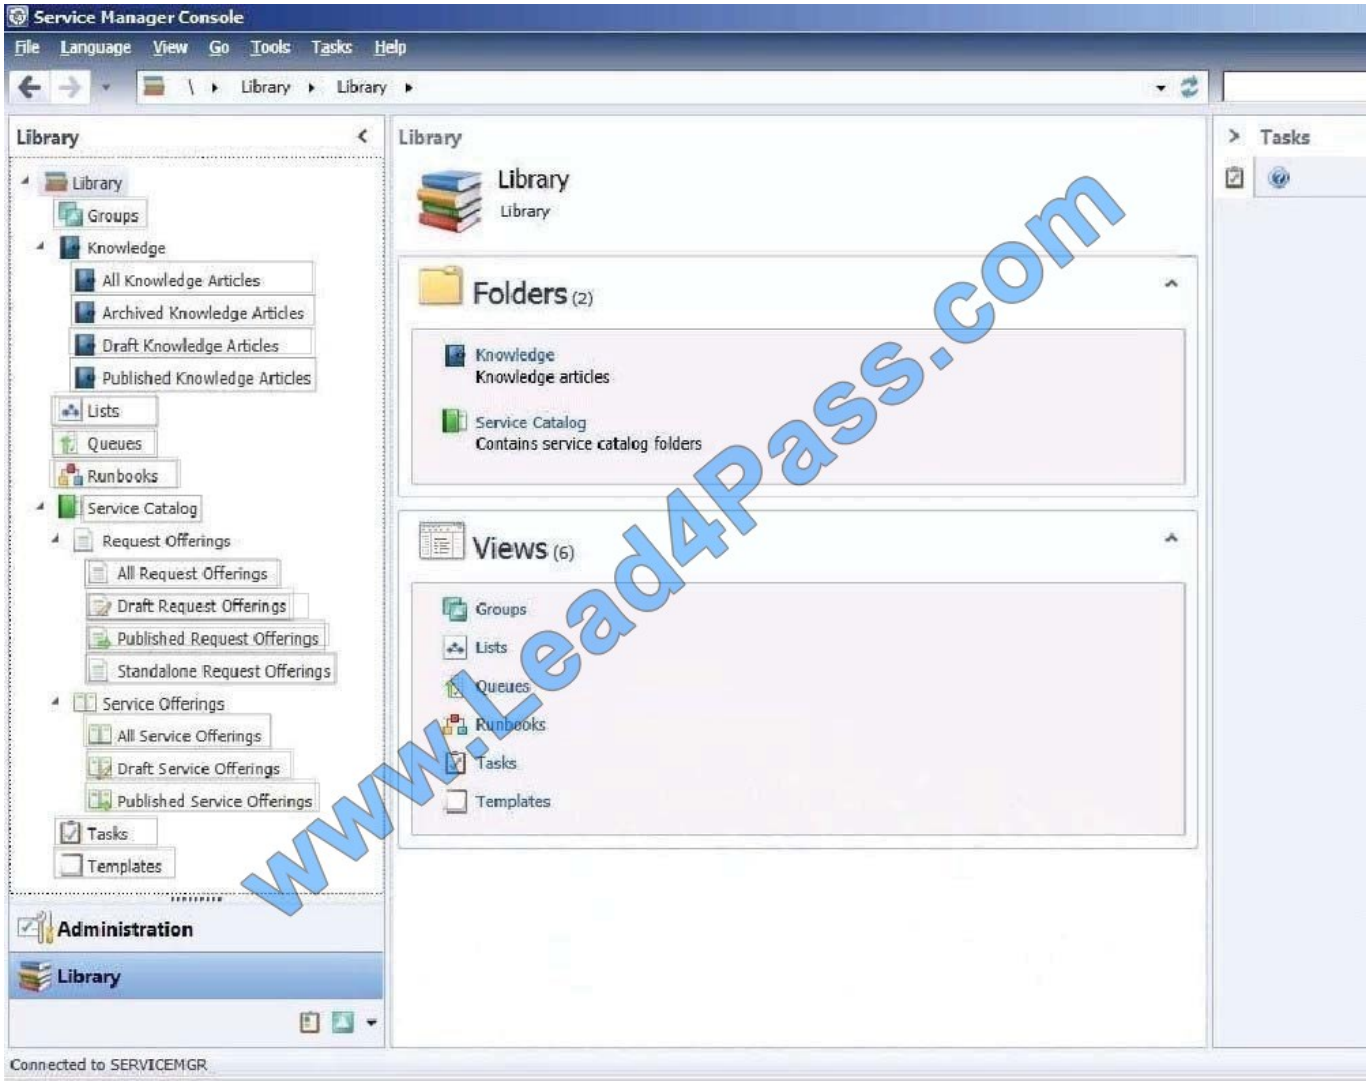
Your company has a private cloud that contains a System Center 2012 Service Manager infrastructure.

You create an incident template as shown in the exhibit.(Click the Exhibit button.)

You need to add SMS as an available source in the incident template.

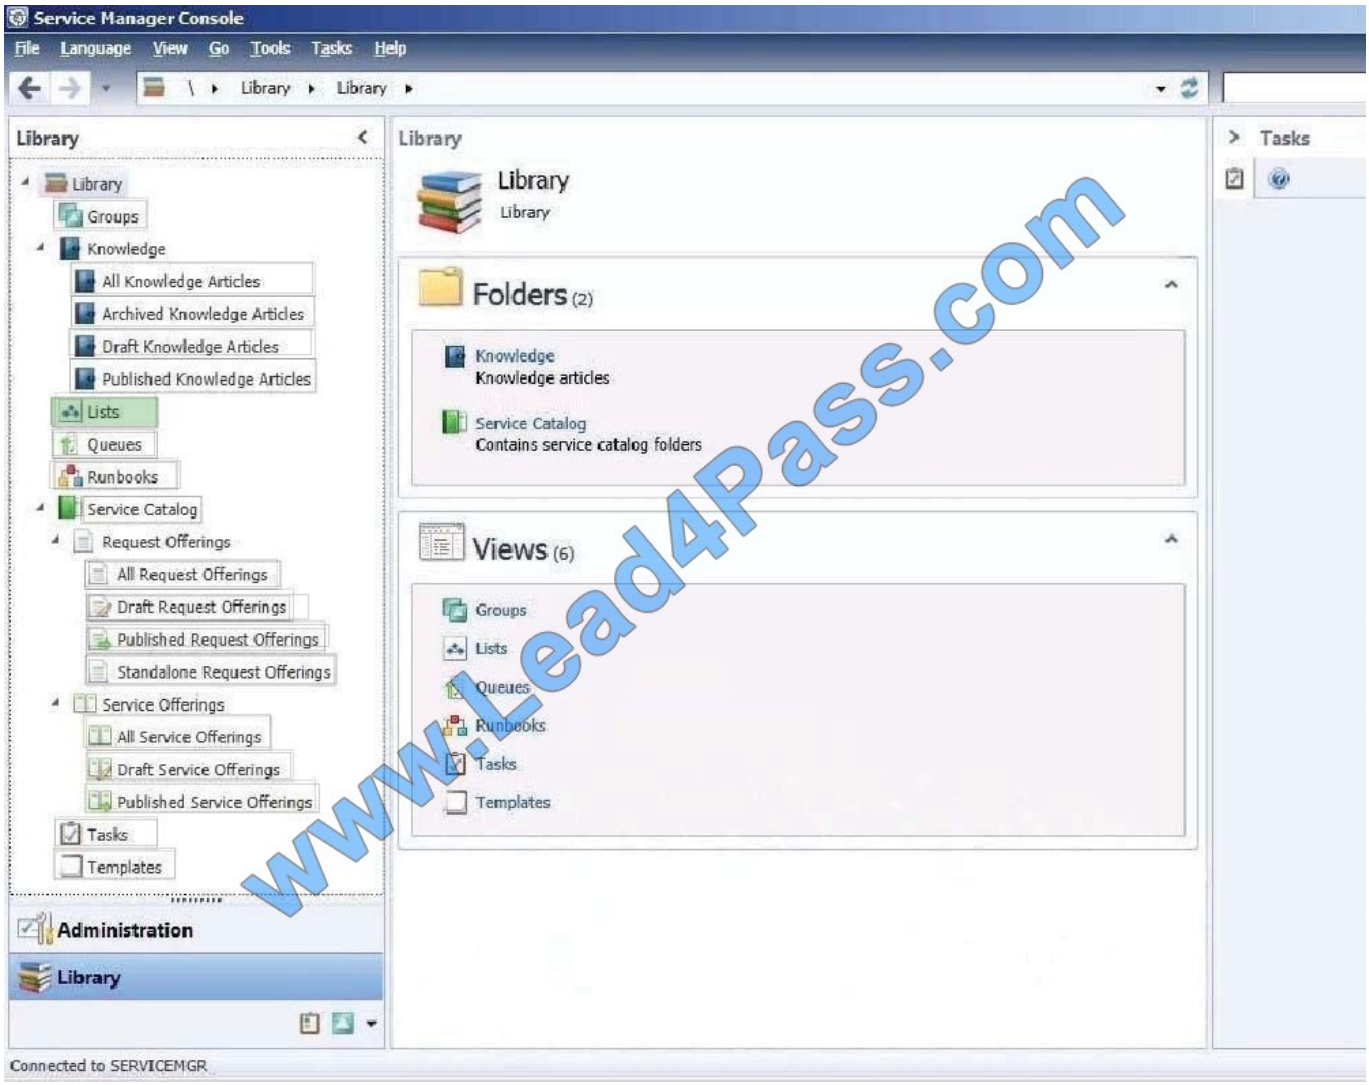
What should you configure? To answer, select the appropriate configuration in the answer area.

Hot Area:



www.Lead4Pass.com

Correct Answer:



www.Lead4Pass.com

QUESTION 5

You need to view the incidents and the related configuration items for the SQL Server clusters.

What should you use?

A. The all incident queue view

B. The active problem view

C. The service status list

D. A service map

Correct Answer: D
