QUESTION 1

Your company has a private cloud that is managed by using a System Center 2012 infrastructure.

The network contains a Virtual Machine Manager (VMM) infrastructure and an Operations Manager infrastructure.

You create and deploy a three-tier service to VMM.

You plan to view service diagrams in Operations Manager.

You need to identify which management packs must be imported to Operations Manager for the planned diagrams.

The solution must minimize the number of imported management packs. Which management packs should you identify? (Each correct answer presents part of the solution. Choose all that apply.)

- A. the Windows Server Operating System management pack
- B. the Internet Information Services 7 Monitoring management pack
- C. the File Services management pack
- D. the Microsoft SQL Server Monitoring Management Pack
- E. the Monitoring Pack for Active Directory (AD)
- F. the Windows Server DNS 2003/2008/2008 R2 Monitoring Management Pack

Correct Answer: ABD

Information on three-tier service in VMM: <http://blogs.technet.com/b/m2/archive/2011/03/29/how-to-deploy-thepet-shop-application-as-a-service-invmm.aspx> Three tiers are Web tier, Middle tier, and SQL tier. A) The Windows Server Operating System management pack provides the fundamental monitoring basics for computers running the Windows 2000 Server and Windows Server 2003, 2003 R2, 2008 and 2008 R2 Operating System B) The Internet Information Services Management Pack provides proactive and reactive monitoring of your Internet Information Services (IIS) environment. C) The File Services management pack retrieves events and other health information generated by the services that make up the File Services role. D) The Monitoring pack for SQL Server provides the capabilities for Operations Manager 2007 R2 and Operations Manager 2012 to discover SQL Server 2005, 2008, 2008 R2, and SQL Server 2012. It monitors SQL Server components such as database engine instances, databases, and SQL Server agents. E) The Monitoring Pack for Active Directory (AD) provides both proactive and reactive monitoring of your Active Directory deployment. F) This management Pack monitors DNS infrastructure health, availability and performance on Microsoft Windows server 2003/2008/2008 R2.

QUESTION 2

Your company has a private cloud that contains a System Center 2012 R2 infrastructure. You have a management server named Server1 that has Operations Manager installed. You have a management server named Server2 that has Virtual Machine Manager (VMM) installed.

You need to monitor network devices by using Operations Manager.

The solution must meet the following requirements:

Only provide the health status of devices located on physical networks.

Only include devices that are one hop away from a managed host. Only include devices that are part of the private cloud.

What should you use?

- A. The Fabric Health Dashboard
- B. The Microsoft System Center Advisor (SCA)
- C. The Network Vicinity Dashboard
- D. The Application Summary Dashboard

Correct Answer: A

QUESTION 3

You need to ensure that the owners of virtual machines are notified automatically if their virtual machine exceeds a specified resource utilization threshold.

What should you create? (More than one answer choice may achieve the goal. Select the BEST answer.)

- A. A Service Manager incident workflow and an Operations Manager subscription
- B. An Operations Manager alert and a System Center 2012 - Virtual Machine Manager (VMM) PRO tip
- C. A System Center 2012 Orchestrator runbook and System Center 2012 - Virtual Machine Manager (VMM) PRO tips
- D. An Operations Manager alert and a Service Manager incident workflow
- E. An Operations Manager alert and an Operations Manager subscription

Correct Answer: D

QUESTION 4

You need to recommend a solution to monitor the SharePoint Server 2010 server farm.

The solution must meet the technical requirements.

What should you include in the recommendation?

- A. A distributed application
- B. A synthetic transaction
- C. A subscription
- D. An event rule

Correct Answer: B

QUESTION 5

Your company has a private cloud that is managed by using a System Center 2012 infrastructure.

You install the servers shown in the following table.

The company's compliance department identifies the following tasks that must be performed:

Back up individual files from VM1.

Back up the configuration settings of VM1.

Restore the configuration settings of VM1.

Restore individual files from VM1 to an alternate location.

The compliance department administrators recommend installing the DPM agent on Server1, and then performing a full backup.

You need to identify which task is NOT met by the recommended solution.

Which task should you identify?

A.

Restore individual files from VM1 to an alternate location.

B.

Restore the configuration settings of VM1.

C.

Back up the configuration settings of VM1.

D.

Back up individual files from VM1.

Correct Answer: B

In the event of disaster recovery, System Center Data Protection Manager (DPM) 2010 allows you to recover virtual machines as files to a network folder. You can then copy those files to an alternate Hyper-V host server. However, to start a virtual machine on an alternate Hyper-V host server, you have to manually create and configure the virtual machine using the recovered files. DPM 2010 supports alternate location recovery (ALR), which allows you to recover a Hyper-V virtual machine to an alternate stand-alone Hyper-V host or to a cluster. The recovered virtual machine is already registered and configured on an alternate Hyper-V host server.

<http://technet.microsoft.com/en-us/library/ff634209.aspx> In a virtualized environment the issue is whether to backup from inside the guest or from the host. The latter provides "bare metal restore" of an entire VM where something's gone catastrophically wrong with a VM (or the host) but in general it doesn't provide granular restore of files / folders. DPM 2010 added Item Level Restore (ILR), allowing you to restore individual files or folders within a VM even though it had only been backed up from the host. But this capability was only available when DPM 2010 ran on physical hardware, if

the DPM server itself was in a VM this capability was not available. DPM 2012 fixes this glitch and can now do ILR even when the DPM server is a VM. <http://4sysops.com/archives/dpm-2012-part-3-other-improvements/>
