### QUESTION 1

Your network contains an Active Directory domain named contoso.com. The domain contains two member servers named Server1 and Server2 that run Windows Server 2012 R2. Server1 has System Center 2012 R2 Virtual Machine Manager (VMM) installed. Server2 has the IP Address Management (IPAM) feature installed.

You need to ensure that address spaces created in VMM are visible in IPAM. What should you do?

- A. From the Virtual Machine Manager console, create a service.
- B. From the Virtual Machine Manager console, add a network service.
- C. From Windows PowerShell, run the Enable-IpamCapabilitycmdlet
- D. From Windows PowerShell, run the Add-SCServerFeaturecmdlet

Correct Answer: B

### QUESTION 2

You need to recommend a solution that meets the manageability requirements of Customer1 after a stamp and a tenant object for Customer1 are created in Service Provider Foundation.

From which server should you recommend performing each task? To answer, drag the appropriate servers to the correct tasks. Each server may be used once,

more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Select and Place:

Servers	Answer Area
App Controller server	Import a .pfx file issued by Customer1. <input type="text" value="Server"/>
Service Provider Foundation server	Import a .cer file issued by Customer1. <input type="text" value="Server"/>
VMM server	Create a trusted issuer and a tenant administrator user role. <input type="text" value="Server"/>

Correct Answer:

Servers	Answer Area
App Controller server	App Controller server
Service Provider Foundation server	Service Provider Foundation server
VMM server	Service Provider Foundation server

### QUESTION 3

You need to recommend which network configuration or configurations are required for the virtual web servers for each instance of App1. Which configuration or configurations should you recommend? (Each correct answer presents part of the solution. Choose all that apply.)

- A. Dynamic IP
- B. Enable spoofing of MAC addresses
- C. Dynamic MAC Address
- D. Static IP
- E. Static MAC Address

Correct Answer: BDE

### QUESTION 4

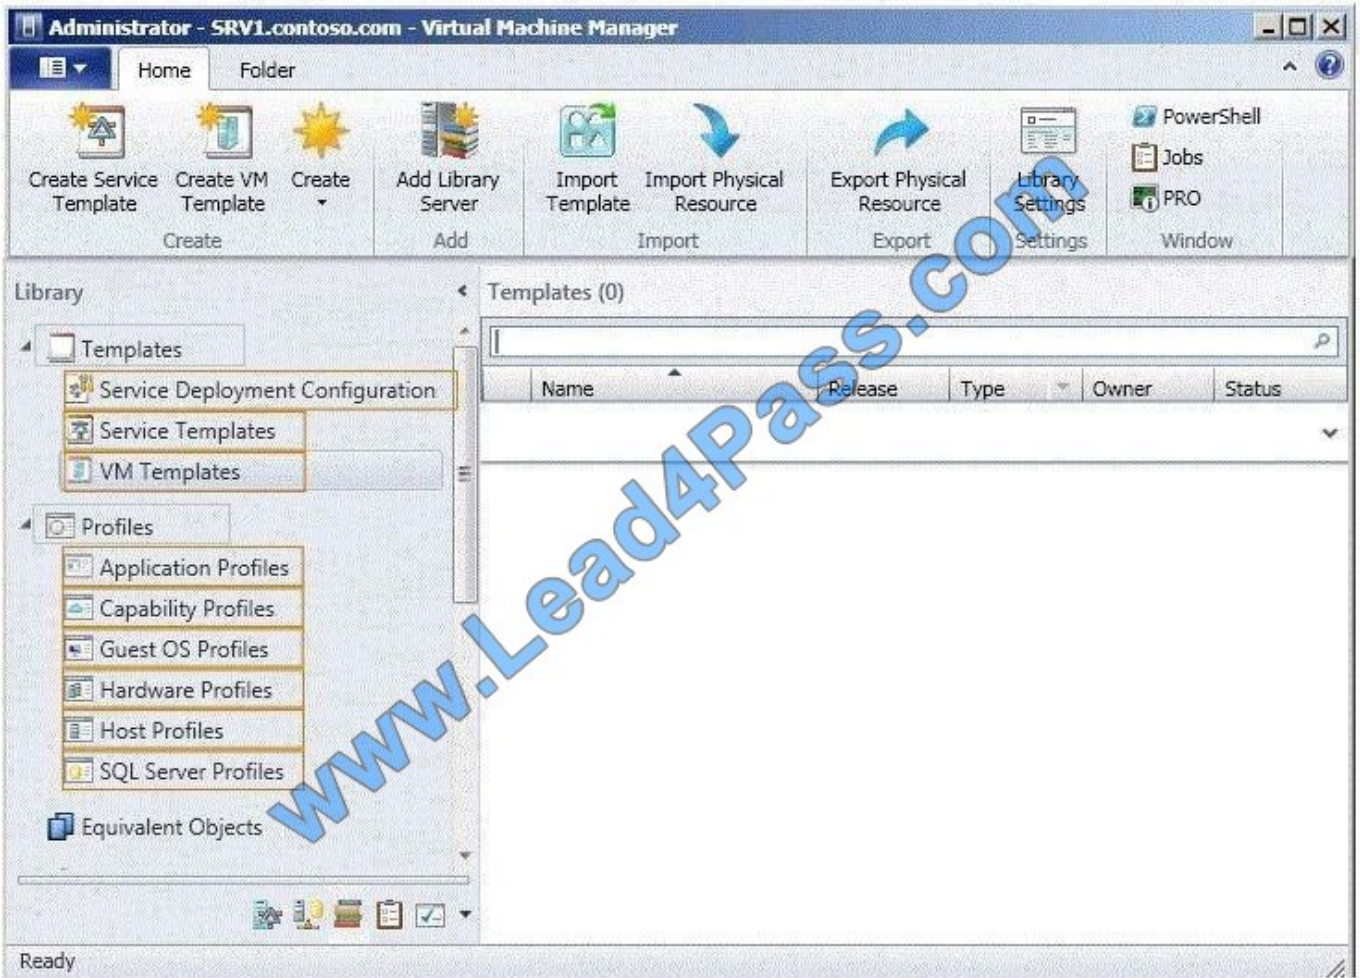

You have a System Center 2012 Virtual Machine Manager (VMM) infrastructure.

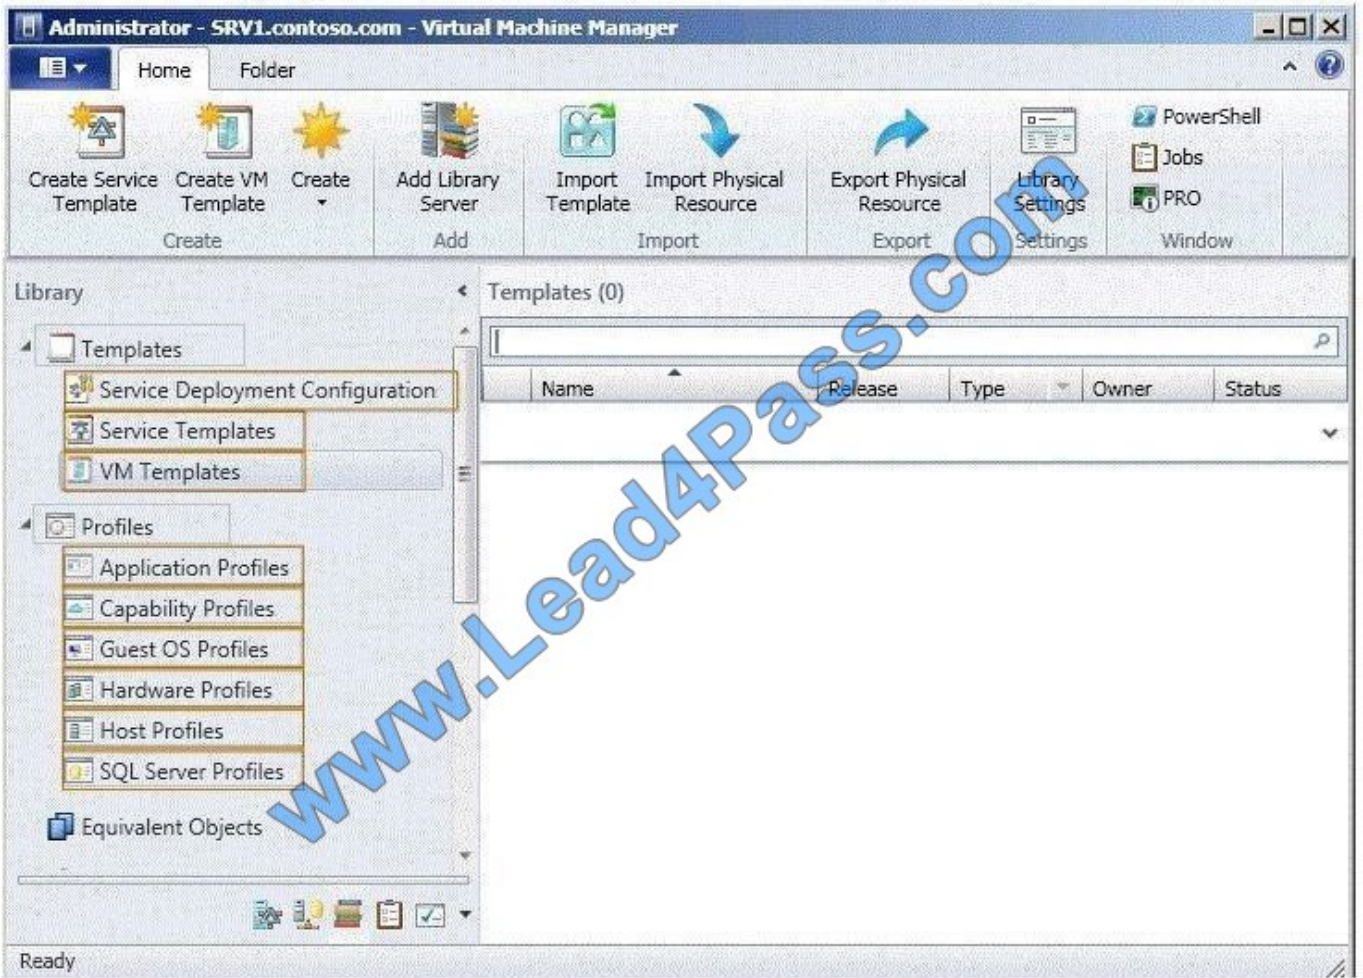

You create a private cloud named Cloud1.

You need to ensure that virtual machines deployed to Cloud1 are allocated a maximum of 4 GB of memory.

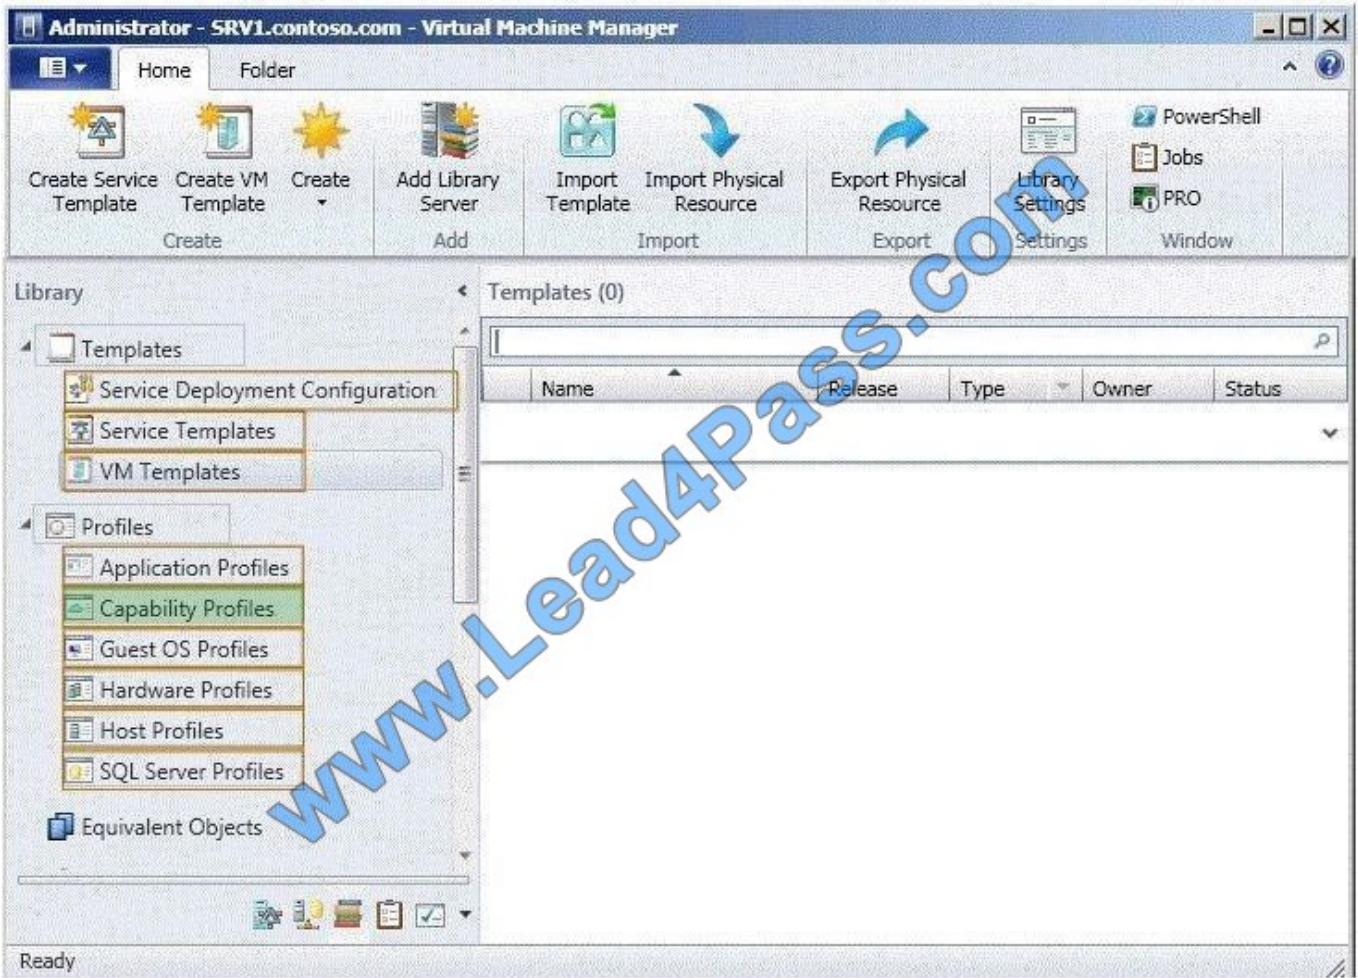

What should you configure from the VMM Administrator Console? To answer, select the appropriate library object in the answer area.

Hot Area:

Correct Answer:

### QUESTION 5

You have a System Center 2012 Service Manager infrastructure that contains a single server named SCSM1.

You plan to use a new account named Account1 as the Operational Database Account.

You plan to configure SCSM1 to use Account1 as the logon account for the System Center Data Access Service.

You need to identify which roles must be assigned to Account1.

Which two roles should you identify? (Each correct answer presents part of the solution. Choose two.)

- A. the Service Manager Administrators User Role Profile
- B. the Microsoft SQL Server db\_ddladmin fixed database role
- C. the Service Manager Workflows User Role Profile
- D. the Service Manager Advanced Operators User Role Profile

E. the Microsoft SQL Server configsvc\_users database role

F. the Microsoft SQL Server sdk\_users database role

Correct Answer: AF

<http://technet.microsoft.com/en-us/library/hh495527.aspx> suggests that A, E and F are required (Service Manager Administrators User Role Profile, configsvc\_users database role and sdk\_users database role) but the question is asking for

just two answers.

<http://technet.microsoft.com/en-us/library/hh495527.aspx> doesn't mention the configsvc\_users database role as below so the answer is A and F.

System Center Configuration service and System Center Data Access service account:

This account is one set of credentials that is used to update and read information in the operational database.

Operations Manager ensures that the credentials used for the System Center Data Access service and System Center

Configuration service account are assigned to the sdk\_user role in the operational database.
