QUESTION 1

You need to configure SharePoint for the appropriate protection of merger documents. What should you do?

- A. Configure Information Rights Management.
- B. Configure Web Part security.
- C. Configure document library permissions.
- D. Configure document conversions.

Correct Answer: A

QUESTION 2

A company has an Active Directory Domain Services (AD DS) domain and a SharePoint environment. The SharePoint environment includes a team site for each department.

All domain users have Read permissions on the root site. Currently only Human Resources department members have access to the Human Resources team site.

You have the following requirements for the Human Resources site:

Employees who are not members of the Human Resources department can view only content that is not marked as sensitive.

Human Resources department members can view all content.

You need to configure permissions for the Human Resources site.

Which three actions should you perform in sequence?

(To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Select and Place:

	Answer Area
Assign the Limited Access permission level on the sensitive content to all users who are not members of the Human Resources department.	
Configure the sensitive content in the Human Resources site to break inheritance from the parent site.	
Assign the Limited Access permission level on the Human Resources site to users who are not members of the Human Resources department.	
Configure the Human Resources site to inherit permissions from the root site.	
Remove the Read permission level on the sensitive content from users who are not members of the Human Resources department.	

Correct Answer:

	Answer Area
Assign the Limited Access permission level on the sensitive content to all users who are not members of the Human Resources department.	Configure the Human Resources site to inherit permissions from the root site.
	Configure the sensitive content in the Human Resources site to break inheritance from the parent site.
Assign the Limited Access permission level on the Human Resources site to users who are not members of the Human Resources department.	Remove the Read permission level on the sensitive content from users who are not members of the Human Resources department.

Note:

* Incorrect: "The Limited Access permission level is designed to be combined with fine-grained permissions to give users access to a specific list, document library, item, or document, without giving them access to the entire site. However, to access a list or library, for example, a user must have permission to open the parent Web site and read shared data such as the theme and navigation bars of the Web site. The Limited Access permission level cannot be customized or deleted" "Limited Access" allows no direct access to site content at all, but is intended to allow users to traverse the site in order to access the items within it that they have explicit permissions to see. Reference: Permission

levels and permissions

QUESTION 3

Contoso, Ltd. Recently merged with Fabrikam, Inc. Each company has an Active Directory Domain Services (AD RS) domain. You are managing the SharePoint environment in each domain.

You need to enable users in the Fabrikam.com domain to access the Contoso SharePoint farm but prevent users in the Contoso.com domain from accessing resources in the Fabrikam SharePoint farm event if they have been explicitly granted access to a site.

Select and Place:

Elements

Web Application Policy

Two-way Forest Trust

Security Groups

One-way Forst Trust

Result Source

Answer Area

1. Configure a **Element** from the Contoso.com domain to the fabrikam.com domain
2. Add the Fabrikam.com **Element** to the Contoso SharePoint farm.
3. Configure a **Element** in the Fabrikam SharePoint farm.

Correct Answer:

Elements

Answer Area

1. Configure a from the Contoso.com domain to the fabrikam.com domain

2. Add the Fabrikam.com to the Contoso SharePoint farm.

3. Configure a in the Fabrikam SharePoint farm.

On-way forest trust Security groups web application policy

QUESTION 4

You are managing a SharePoint farm. All users in the farm have access to a document library app.

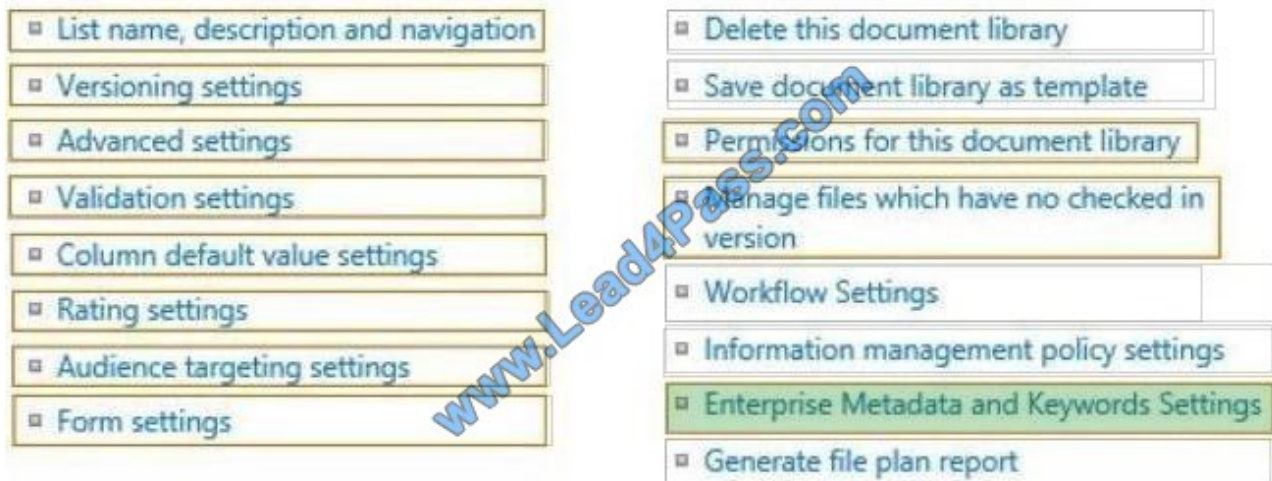

You need to begin the process of enabling managed terms for the app.

Which option should you select? (To answer, select the appropriate option in the answer area.)

Hot Area:

<input type="checkbox"/> List name, description and navigation	<input type="checkbox"/> Delete this document library
<input type="checkbox"/> Versioning settings	<input type="checkbox"/> Save document library as template
<input type="checkbox"/> Advanced settings	<input type="checkbox"/> Permissions for this document library
<input type="checkbox"/> Validation settings	<input type="checkbox"/> Manage files which have no checked in version
<input type="checkbox"/> Column default value settings	<input type="checkbox"/> Workflow Settings
<input type="checkbox"/> Rating settings	<input type="checkbox"/> Information management policy settings
<input type="checkbox"/> Audience targeting settings	<input type="checkbox"/> Enterprise Metadata and Keywords Settings
<input type="checkbox"/> Form settings	<input type="checkbox"/> Generate file plan report

Correct Answer:

Note: Consistent use of metadata The managed metadata features in SharePoint products enable you to control how users add metadata to content. For example,

by using term sets and managed terms, you can control which terms users can add to content, and you can control who can add new terms. You can also limit

enterprise keywords to a specific list by configuring the Keywords term set as closed.

When the same terms are used consistently across sites, it is easier to build robust processes or solutions that rely on metadata. Additionally, it is easier for site

users to apply metadata consistently to their content.

QUESTION 5

You need to resolve the authentication issue that occurs in the SharePoint environment.

What should you do?

- A. Deploy the Secure Store Service.
- B. Use classic mode authentication and set the authentication type to NTLM.
- C. Use the Distributed Cache service.
- D. Use classic mode authentication and set the authentication type to Kerberos.

Correct Answer: C
