### QUESTION 1

You need to meet the requirements for the projects.contoso.com site.

Which two actions should you perform? (Each correct answer presents part of the solution. Choose two.)

- A. Add the Site Mailbox app to the site.
- B. Create a distribution list, and add the project team members to the distribution list.
- C. Add all the project team members to the Members group of the site.
- D. Create an AD security group, and add all the project team members to the security group.
- E. Email-enable a document library app on the site.

Correct Answer: AC

\* From scenario:

Users of the Partner Projects site collection must be able to share content from their Microsoft Outlook clients and receive content from external users who send email directly to the site

A Site Mailbox is a shared inbox in Exchange Online that all the members of a SharePoint Online site can access. It is implemented in SharePoint Online Preview as what is known as an app. An app is best described as a solution that carries a light footprint and uses standards-based technologies such as HTML5, JavaScript, and OAuth. The Site Mailbox is accessible from the site in which it is created. It allow access to users who are individually listed in the Owners and Members groups of the site - security groups or distribution lists are not supported by Site Mailboxes. The email address of the site mailbox will be generated automatically from the name of the site. Site mailboxes are surfaced in Outlook 2013 and give you easy access to the emails and documents for the projects you care about. Site Mailboxes are listed in the Folder Explorer in Outlook 2013 (the rich client), letting you file emails or documents into the shared project space simply by dragging the email, document, or attachment into the site mailbox.

### QUESTION 2

You plan to set up an external list to work with the existing line-of-business application in the cloud.

You need to upload a configuration file to SharePoint Online to enable communication with the external data.

Which configuration file should you upload?

- A. A Microsoft Business Connectivity Services (BCS) resource file
- B. A Microsoft Business Data Connectivity (BDC) service model file that specifies a LobSystemInstance
- C. A SharePoint trust configuration file that specifies permissions
- D. A comma-separated OData definition file that specifies instance permissions

Correct Answer: B

### QUESTION 3

A web application is configured in a SharePoint environment.

A user receives an application error message that includes a correlation ID.

You need to find out the cause of the error.

Which two actions can you perform to achieve this goal? (Each correct answer presents a complete solution. Choose two.)

- A. Locate the correlation ID in the Security event log.
- B. Enable the Developer Dashboard and review the content.
- C. Locate the correlation ID in the Unified Logging Service (ULS).
- D. Locate the correlation ID in the System event log.

Correct Answer: BC

---

### QUESTION 4

You are configuring permission levels for two user groups named Architects and Sales.

You have the following requirements for SharePoint site permissions:

Architects must be able to view website usage reports.

Sales must be able to edit documents online.

You need to configure the appropriate permission levels for each group.

Which permission levels should you assign? (To answer, drag the appropriate permission levels to the correct group or groups in the answer area. Each permission level may be used once, more than once, or not at all. You may need to drag

the split bar between panes or scroll to view content.)

Select and Place:

Answer Area	
Group	Permission level
Managers	
Editors	

Apply Style Sheets

Manage Lists

Manage Web Site

Use Client Integration Features

View Web Analytics Data

Correct Answer:

Answer Area	
Group	Permission level
Managers	View Web Analytics Data
Editors	Use Client Integration Features

Apply Style Sheets

Manage Lists

Manage Web Site

Note:

\* After the Web Analytics service application is configured, the View Web Analytics Data permission needs to be created for users that are not a site collection administrator or site owner. This is the minimum required permission needed to view Web Analytics reports.

\* Use Client Integration Features Use features that start client applications. Without this permission, users must work on documents locally and then upload their changes. Reference: Create and configure the View Web Analytics Data permission

### QUESTION 5

A three-tiered SharePoint farm contains two front-end web servers, one application server, and one enterprise database server. The database server is also used by other critical line-of-business applications. You do not have administrative rights on the database server.

The SharePoint content databases are fragmented and are degrading the performance of other databases.

You need to access the correct tools for performing maintenance on the SharePoint content databases.

Which option should you choose? (To answer, select the appropriate option in the answer area.)

Hot Area:

# Monitoring

## Health Analyzer

Review problems and solutions	Review rule definitions
-------------------------------	-------------------------

## Timer Jobs

Review job definitions	Check job status
------------------------	------------------

## Reporting

View administrative reports	Configure diagnostic logging
Configure usage and health data collection	View health reports

Correct Answer:

# Monitoring

## Health Analyzer

Review problems and solutions	Review rule definitions
-------------------------------	-------------------------

## Timer Jobs

Review job definitions	Check job status
------------------------	------------------

## Reporting

View administrative reports	Configure diagnostic logging
Configure usage and health data collection	View health reports

Note:

Resolution: Enable and run the crawl database defragmentation health rule

1. Verify that the user account that is performing this procedure is a member of the Farm Administrators group.

2. In Central Administration, on the home page, click Monitoring.
3. On the Monitoring page, in the Health Analyzer section, click Review rule definitions.
4. On the All Rules page, in the Performance section, click Search - One or more crawl databases may have fragmented indices.
5. If the rule is not enabled, in the Health Analyzer Rule Definitions dialog, click Edit Item on the ribbon. Ensure that the Enabled check box is selected, and then  
click Save on the ribbon.
6. On the ribbon, click Run Now.
7. Click Close.

The rule iterates over all crawl databases in all Search service applications. When it runs, it attempts to perform an online defragmentation first, and then it

switches to offline defragmentation where required. In online defragmentation, only the SQL Server leaf pages are defragmented, not the SQL Server locked

pages. In offline defragmentation, the locked pages and all the leaf pages are defragmented.

Reference: Search - One or more crawl databases may have fragmented indices (SharePoint 2013)
