QUESTION 1

You have a Lync Server 2013 infrastructure that contains two servers. The servers are configured as shown in the following table.

Server name	Role
Lync1.contoso.com	Front End Server
Lync2.contoso.com	Mediation Server

You deploy a new server named lync3.contoso.com.

You plan to install the Edge Server role on Lync3.

You need to identify which tasks must be performed to install the Edge Server role on Lync3.

Which four actions should you identify?

To answer, move the four appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions	Answer Area
On Lync3, install Lync Server 2013.	
From Lync1, modify the topology by using the Topology Builder.	
From Lync3, run the Import-CsConfiguration cmdlet.	
From Lync1, publish the topology by using the Topology Builder.	
From Lync1, run the Export-CsConfiguration cmdlet.	

Correct Answer:

Actions	Answer Area
	From Lync1, modify the topology by using the Topology Builder.
	From Lync1, publish the topology by using the Topology Builder.
From Lync3, run the Import-CsConfiguration cmdlet.	From Lync1, run the Export-CsConfiguration cmdlet.
	On Lync3, install Lync Server 2013.

Note:

You install Lync Server 2013 on Edge Servers by using Lync Server Deployment Wizard.

By running the Deployment Wizard on each Edge Server, you can complete most of the tasks required to set up the Edge Server. In order to deploy Lync Server 2013 on an Edge Server, you must have already run Topology Builder (see note 2 below) to define and publish your Edge Server topology, and exported it to media that is available from the Edge Server.

To install an Edge Server

Log on to the computer on which you want to install your Edge Server as a member of the local Administrators group or an account with equivalent user rights and permissions.

Ensure that the topology configuration file you created using Topology Builder, and then exported and copied to external media, is available on the Edge Server (for example, access to the USB drive onto which you copied the topology configuration file, or verify access to the network share where you copied the file).

Start the Deployment Wizard.

In the Deployment Wizard, click Install or Update Lync Server System.

After the wizard determines the deployment state, for Step 1. Install Local Configuration Store, click Run and then do the following:

* In the Configure Local Replica of Central Management Store dialog box, click Import from a file (Recommended for Edge Servers), go to the location of the exported topology configuration file, select the .zip file, click Open, and then click Next.

* The Deployment Wizard reads the configuration information from the configuration file and writes the XML configuration file to the local computer.

* After the Executing Commands process is finished, click Finish. Etc. Note 2: To define the topology for a single Edge Server

Start Topology Builder: Click Start, click All Programs, click Microsoft Lync Server 2013, and then click Lync Server Topology Builder.

In the console tree, expand the site in which you want to deploy an Edge Server.

Right-click Edge pools, and then click New Edge Pool.

In Define the New Edge Pool, click Next.

In Define the Edge pool FQDN

Note 3: Export-CsConfiguration Exports your Lync Server topology, policies, and configuration settings to a file. Among other things, this file can then be used to restore this information to the Central Management store after an upgrade, a hardware failure, or some other issue has resulted in data loss. This cmdlet was introduced in Lync Server 2010.

QUESTION 2

You need to enable archiving for all Skype for Business users.

Which Skype for Business Management Shell cmdlet should you use?

- A. Set-CsClientPolicy
- B. Set-CsArchivingPolicy
- C. Set-CsUser
- D. Set-CsUserServicesPolicy
- E. Set-CsArchivingConfiguration

Correct Answer: E

Explanation: <https://technet.microsoft.com/en-us/library/dn951399.aspx>

QUESTION 3

You are asked to architect the solution for the Paris office.

You need to select the most appropriate answers to satisfy the request.

Which two actions should you perform? Each correct answer presents part of the solution.

- A. Deploy a Skype for Business Edge pool and a Reverse Proxy pool in Paris.
- B. Deploy a Skype for Business Enterprise Edition pool in Paris.
- C. Reserve A/V MCU resources on London pool for meetings scheduled by users located in Paris.
- D. Deploy a Survivable Branch appliance in Paris.
- E. Deploy a Skype for Business Standard Edition in Paris.

Correct Answer: CD

QUESTION 4

Three months after you deploy Skype for Business Server 2015, you must modify the configuration to meet the technical requirements. Which Skype for Business Management Shell cmdlet should you run?

- A. Set-CsMobilityPolicy
- B. Set-CsClientVersionPolicy
- C. Set-CsDeviceUpdateConfiguration
- D. Set-CsClientPolicy
- E. Set-CsClientVersionConfiguration

Correct Answer: B

QUESTION 5

You have a Skype for Business Server 2015 infrastructure that consists of two sites. The sites are located in New York and Rome. Each site has a voice policy deployed and contains separate dial plans and voice policies.

You plan to deploy dial-in conferencing to both sites. In each site, you create a dedicated conferencing policy. You assign the respective users in each site. You create a dial-in conferencing access number.

When you attempt to assign a region to the number, you discover that the regions are unavailable.

You need to ensure that you can add a region to the dial-in conferencing access number.

What should you modify ?

- A. the meeting configuration settings
- B. the dial plans
- C. the conferencing policies
- D. the voice policies

Correct Answer: B
