QUESTION 1

You have an Exchange Server organization. The organization contains servers that have either Exchange Server 2010 or Exchange Server 2013 installed.

You hire a new helpdesk technician named helpdesk1. Helpdesk1 is a member of the Recipient Management management role group.

You discover that helpdesk1 created nine new mailbox-enabled users by using the New-Mailbox command.

You need to identify which management role provides helpdesk1 with the permissions to create new mailbox-enabled users.

Which cmdlets should you run?

- A. Get-ManagementRoleEntry and Get-ManagementRoleAssignment
- B. Get-RolegroupMember and Get-ManagementRoleAssignment
- C. Get-ManagementRoleEntry and Get-RoleGroup
- D. Get-Rolegroup and Get-RoleGroupMember

Correct Answer: A

*

Use the Get-ManagementRoleEntry cmdlet to retrieve management role entries that have been configured on management roles.

*

Use the Get-ManagementRoleAssignment cmdlet to retrieve management role assignments.

QUESTION 2

You need to identify which technologies must be deployed to meet the Office 365 coexistence requirements. Which two technologies should you identify? (Each correct answer presents part of the solution. Choose two.)

- A. the Microsoft Online Services Directory Synchronization tool
- B. Active Directory Federation Services (AD FS) 2.0
- C. Active Directory Rights Management Services (AD RMS)
- D. an internal root CA
- E. Active Directory Lightweight Directory Services (AD LDS)

Correct Answer: AB

* Scenario: Contoso identifies the following Office 365 coexistence requirements:

/ Office 365 users must be able to access their mailbox by using their Active Directory user account in Contoso.

/ On-premises users must be able to share free/busy information and calendar information with the Office 365 users.

A: When you create an Office 365 mailbox in Exchange Online in a hybrid deployment, the mail user is created in Active Directory on-premises. Directory synchronization, if it's configured, automatically synchronizes this new user object to

Office 365, where it's converted to a cloud mailbox in Exchange Online. You can create Office 365 mailboxes as regular user mailboxes, resource mailboxes for meeting rooms and equipment, and shared mailboxes.

B: Step-By-Step: Setting up AD FS and Enabling Single Sign-On to Office 365

QUESTION 3

HOTSPOT

You need to recommend a solution that meets the compliance requirements for emailing bank account numbers.

Which command should you include in the recommendation? (To answer, select the appropriate options in the answer area.)

Hot Area:

Answer Area

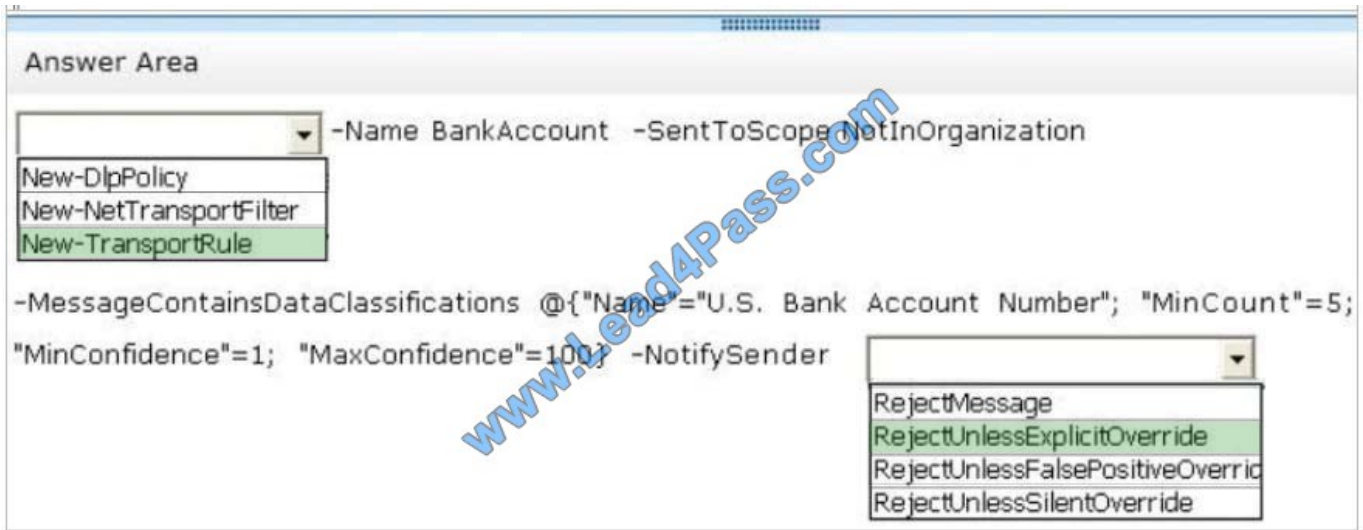

-Name BankAccount -SentToScope NotInOrganization

- New-DlpPolicy
- New-NetTransportFilter
- New-TransportRule

-MessageContainsDataClassifications @{ "Name"="U.S. Bank Account Number"; "MinCount"=5; "MinConfidence"=1; "MaxConfidence"=100 } -NotifySender

- RejectMessage
- RejectUnlessExplicitOverride
- RejectUnlessFalsePositiveOverride
- RejectUnlessSilentOverride

Correct Answer:

* Scenario: All users must be notified before they send an email message that contains any five bank account numbers to an external recipient. The users must be able to override the requirement if they have a valid business reason to send the email message.

* Transport rules apply actions to messages, most with corresponding action values.

RejectUnlessSilentOverride

Message is rejected unless the sender has chosen to override the policy restriction.

RejectUnlessExplicitOverride

This is the same as RejectUnlessSilentOverride, but the sender can also provide a justification for overriding the policy restriction.

Reference: New-TransportRule

QUESTION 4

Your company has three offices. Each office has 1,000 users and is configured as an Active Directory site. Each site connects directly to the Internet. The network contains six servers that have Exchange Server 2013 installed. The servers are configured as shown in the following table.

Server name	Site name	External name
EX1	Main1	web1.adatum.com
Server1	Main1	web1.adatum.com
EX2	Main2	web2.adatum.com
Server2	Main2	web2.adatum.com
EX3	Main3	web3.adatum.com
Server3	Main3	web3.adatum.com

An administrator performs a datacenter switchover by changing the DNS record for web1.adatum.com to point to the IP

address of web2.adatum.com.

Users from Main1 report that when they connect to Outlook Web App, they receive a certificate warning message. You need to recommend a solution to ensure that the users do not receive a certificate warning message when a datacenter switchover is performed.

What should you include in the recommendation?

- A. Three host headers for the Default Web Site on each Client Access server
- B. One certificate that contains all of the external names as subject alternative names
- C. Three certificates that each contains one of the external names
- D. An external URL for each Client Access server set to \$null

Correct Answer: B

SAN Certificates (Subject Alternative Names)

This type of certificate allows more than a single name in a single SSL certificate which makes total sense for the new Microsoft products (Lync and Exchange) because several services are using names and all of them are underneath the same IIS Web Site. In some Public CA these certificates are also known as UC Certificates.

Reference: Managing Certificates in Exchange Server 2013

QUESTION 5

You have a hybrid deployment of Exchange Server 2013 and Microsoft Office 365.

The network does not have Active Directory Federation Services (AD FS) 2.0 installed.

A user named User1 reports that he cannot access his mailbox because his account is locked out.

You verify that the mailbox of User1 is hosted on Office 365.

You need to unlock the account of User1.

Which cmdlet should you run?

- A. Set-MailUser
- B. Set-MSolUser
- C. Set-Mailbox
- D. Set-ADUser

Correct Answer: B

Applies To: Office 365, Windows Azure, Windows Intune The Set-MSolUser cmdlet is used to update a user object. Parameters include:

-BlockCredential

When true, the user will not be able to sign in using their user ID.

Incorrect:

Not C: Set-Mailbox

Use the Set-Mailbox cmdlet to modify the settings of an existing mailbox. Applies to: Exchange Server 2013, Exchange Online
