The default self-signed certificates are installed on both servers.

All of the users in the organization work from home and from customer locations. You purchase a Layer 7 hardware-based load balancer. You configure SSL

bridging without session affinity for Outlook on the web connections. The load balancer has an internal fully qualified domain name (FQDN) of lb1.contoso.local.

DNS servers are configured to resolve mail.contoso.com names to the external IP address of the load balancer.
