QUESTION 1

A company plans to implement SharePoint. You have the following requirements:

You must implement a hybrid, two-way trust environment.

You must implement single sign on.

You must minimize costs.

You need to plan the implementation of the solution.

Which products should you implement? To answer, select the appropriate product from each list in the answer area.

Hot Area:

Technology	Product
Office 365 version	<ul style="list-style-type: none">SharePoint Online E1SharePoint Online E3
SharePoint on-premises	<ul style="list-style-type: none">SharePoint 2013 StandardSharePoint 2013 Enterprise
Authentication	<ul style="list-style-type: none">On-premises Active Directory Domain Services (AD DS)On-premises Active Directory Federation Services (AD FS)
Internet end-point	<ul style="list-style-type: none">Reverse ProxySSL Certificate

Correct Answer:

Technology	Product
Office 365 version	<ul style="list-style-type: none">SharePoint Online E1SharePoint Online E3
SharePoint on-premises	<ul style="list-style-type: none">SharePoint 2013 StandardSharePoint 2013 Enterprise
Authentication	<ul style="list-style-type: none">On-premises Active Directory Domain Services (AD DS)On-premises Active Directory Federation Services (AD FS)
Internet end-point	<ul style="list-style-type: none">Reverse ProxySSL Certificate

QUESTION 2

A SharePoint deployment includes the content source described in the following table.

You need to configure the intranet site content source to return search results without impacting availability.

What should you do?

- A. Add an additional index server to the farm.
- B. Reset the search index.
- C. Configure continuous crawling.
- D. Configure an incremental crawl to run every day.
- E. Configure an incremental crawl to run every 30 minutes.
- F. Configure on-demand crawling.

Correct Answer: C

QUESTION 3

You have a SharePoint Server 2013 server farm.

The corporate taxonomy contains two term sets named Offices and Cities.

You need to ensure that the terms in the Cities term set can be used by the Offices term set,

What should you use?

- A. query refinement
- B. pinned terms
- C. managed navigation
- D. local properties

Correct Answer: B

Explanation: SharePoint 2013 adds the concept of Pinning to taxonomy and the term store management tool. You might first encounter the option to Pin instead of Reuse on the page to add a catalog connection from cross site publishing or as a new node in the menu for a term in the term store management tool titled "Pin Term With Children." While at least one reason for choosing Pinning is better understood in the context of search driven publishing the tangible difference between the two is actually concise.

The difference is that while Pinning maintains a certain relationship (shared properties) between source term and Reuse instance on a one on one basis as Reuse does, Pinning also updates the hierarchy regarding the removal and addition of terms anywhere within that hierarchy.

QUESTION 4

You are managing a SharePoint farm. The SharePoint databases are configured to run on a dedicated instance of Microsoft SQL Server 2008 R2 Service Pack 1.

You need to optimize query executions.

What should you do?

- A. Set the maximum degree of parallelism for SQL Server instances to 4.
- B. Set the maximum degree of parallelism for SQL Server instances to 1.
- C. Move the master database to a RAID 5 volume.
- D. Set the maximum degree of parallelism for SQL Server instances to 32.

Correct Answer: B

Set max degree of parallelism (MAXDOP) to 1 for instances of SQL Server that host SharePoint databases to make sure that a single SQL Server process serves each request.

Important:

Setting the max degree of parallelism to any other number can cause a less optimal query plan to be used that will decrease SharePoint Server 2013 performance.

Ref: [http://technet.microsoft.com/en-us/library/hh292622\(v=office.15\).aspx](http://technet.microsoft.com/en-us/library/hh292622(v=office.15).aspx)

QUESTION 5

You plan to deploy SharePoint Server 2013 to your enterprise organization's multi-farm configuration.

A dedicated enterprise services farm will be created to host shared service applications.

Two collaboration farms will be created to host collaboration sites.

All users must be able to perform the following tasks:

Aggregate tasks from different site collections.

Automatically translate pages to different languages.

Classify documents by using an enterprise taxonomy.

View Microsoft Excel files rendered in the web browser of the users.

You need to identify which service applications to deploy to each farm.

What should you identify? (To answer, drag the appropriate service applications to the correct farms. Each service application may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

Select and Place:

Service Applications	Answer Area
Excel Services Application	Enterprise farm: Service application
Machine Translation Service	Enterprise farm: Service application
Managed Metadata Service	Collaboration farm: Service application
Work Management Service	Collaboration farm: Service application

Correct Answer:

Service Applications	Answer Area
<input type="text"/>	Enterprise farm: <input type="checkbox"/> Machine Translation Service <input type="checkbox"/>
<input type="text"/>	<input type="checkbox"/> Managed Metadata Service <input type="checkbox"/>
<input type="text"/>	Collaboration farm: <input type="checkbox"/> Excel Services Application <input type="checkbox"/>
<input type="text"/>	<input type="checkbox"/> Work Management Service <input type="checkbox"/>
