### QUESTION 1

You have a Windows 10 Enterprise computer.

The computer has a shared folder named C:\Marketing. The shared folder is on an NTFS volume.

The current NTFS and share permissions are configured as follows.

Group name	NTFS permission	Shared folder permission
Everyone	Read and Execute	Read
Marketing	Modify	Full Control

UserA is a member of both the Everyone group and the Marketing group. UserA must access C:\Marketing from across the network. You need to identify the effective permissions of UserA to the C:\Marketing folder. What permission should you identify?

- A. Full Control
- B. Read and Execute
- C. Read
- D. Modify

Correct Answer: D

UserA is a member of both the Everyone group and the Marketing group and UserA must access C:\Marketing from across the network. When accessing a file locally, you combine the NTFS permissions granted to your account either directly

or by way of group membership. The `least` restrictive permission is then the permission that applies.

In this question, the NTFS permission is the least restrictive of Read/Execute and Modify...

so Modify is the effective permission.

When accessing a folder or file across the network, you combine the effective NTFS permissions (Modify in this case) with the effective Share permissions granted to your account either directly or by way of group membership (Full Control in

this case). The `most` restrictive permission is then the permission that applies. Modify is more restrictive than Full Control so Modify is the effective permission.

### QUESTION 2

A company deploys Outlook to all users that have iOS and Android devices. The company uses Microsoft Intune to manage mobile devices. You enforce a conditional access policy that requires users to enroll devices in Intune before they

can access Exchange ActiveSync data.

Some Android and iOS users access Exchange ActiveSync data by using unmanaged email applications.

You need to ensure that users Exchange ActiveSync data only from Outlook.

What should you do?

- A. Create an Exchange access rule. Select Outlook family and Outlook for Android and iOS as the model.
- B. In Intune, create a new compliance policy that forces email accounts to be managed by Intune.
- C. Create a security group for all users that are not using Outlook as the email applications. Configure Exchange Online conditional access policy to exempt members of the group.
- D. Configure a custom Open Mobile Alliance Uniform Resource Identifier setting and deploy the setting to all users.

Correct Answer: A

### QUESTION 3

DRAG DROP

You need to resolve the Security team service announcement.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

#### Possible Actions

#### Answer Area

In the Mandatory Updates list, filter by <b>Needing additional approvals</b> , and approve the update.	
Select the Windows 10 computer device group in the Approval wizard.	
Configure the approval settings to require install with a deadline of as soon as possible.	
Configure the approval settings to require install with a deadline of one month.	
In the Security Updates list, filter by <b>New updates to approve</b> , and approve the update.	
Select the Windows 10 mobile device group in the Approval wizard.	

Correct Answer:

**Possible Actions**

**Answer Area**

Configure the approval settings to require install with a deadline of one month.
In the Security Updates list, filter by <b>New updates to approve</b> , and approve the update.
Select the Windows 10 mobile device group in the Approval wizard.

In the Mandatory Updates list, filter by <b>Needing additional approvals</b> , and approve the update.
Select the Windows 10 computer device group in the Approval wizard.
Configure the approval settings to require install with a deadline of as soon as possible.

- 1: In the Mandatory Updates list, filter by Needing additional approvals, and approve the update.
- 2: Select the Windows 10 computer device group in the Approval wizard.
- 3: Configure the approval settings to require install with a deadline as soon as possible.

**QUESTION 4**

**HOTSPOT**

A bank deploys Active Directory Rights Management Services (AD RMS). The bank plans to migrate to Azure Rights Management Services (Azure RMS) as an alternative to the on- premises based AD RMS.

The bank must follow regulatory policies that restrict access to certain financial documents.

In the table below, identify which function each platform supports.

NOTE: Make only selection in each column. Each correct selection is worth one point.

Hot Area:

### Answer Area

Function	AD RMS	Azure RMS
Certificate management	<input type="radio"/>	<input type="radio"/>
Supports information rights management capabilities in Microsoft Online services	<input type="radio"/>	<input type="radio"/>
Supports Office for Mac 2011	<input type="radio"/>	<input type="radio"/>

Correct Answer:

### Answer Area

Function	AD RMS	Azure RMS
Certificate management	<input checked="" type="radio"/>	<input type="radio"/>
Supports information rights management capabilities in Microsoft Online services	<input type="radio"/>	<input checked="" type="radio"/>
Supports Office for Mac 2011	<input checked="" type="radio"/>	<input type="radio"/>

### QUESTION 5

#### HOTSPOT

You have a standalone computer that runs Windows 10 Enterprise. The computer is configured to automatically back up files by using File History. The user of the computer uses the OneDrive desktop app to sync files.

The Previous Versions settings from the local group policy of the computer are shown in the following graphic.

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic. NOTE: Each correct selection is worth one point.

Hot Area:

**Answer Area**

If a user deletes a file from OneDrive by using File Explorer, the file [answer choice].

cannot be restored  
can be restored from onedrive.com  
can be restored by using the Previous Versions tab

If a user deletes a file from a local drive by using File Explorer, the file [answer choice].

cannot be restored  
can be restored from onedrive.com  
can be restored by using Previous Versions tab

Correct Answer:

**Answer Area**

If a user deletes a file from OneDrive by using File Explorer, the file [answer choice].

cannot be restored  
can be restored from onedrive.com  
can be restored by using the Previous Versions tab

If a user deletes a file from a local drive by using File Explorer, the file [answer choice].

cannot be restored  
can be restored from onedrive.com  
can be restored by using Previous Versions tab

When a file is deleted from the local OneDrive folder with File Explorer, the deletion is replicated to Onedrive.com and the file is moved to the OneDrive recycle bin. The deleted file can therefore be recovered from the Recycle Bin on

Onedrive.com.

If a user deletes a file from a local drive by using File Explorer, the file cannot be restored. If the file is not in the OneDrive folder, it will not be a file that is synced to onedrive.com. We could use Previous Versions to restore the file but this is

prevented by the Group Policy settings. The "Prevent restoring local previous versions" ?Enabled group policy setting would prevent the previous version from being restored.
