QUESTION 1

Your network contains one Active Directory forest named contoso.com.

You create a starter Group Policy object (GPO) named Starter_GPO1.

From the Delegation tab Of Starter_GPO1, you add a group named GPO_Admins and you assign the Edit settings permissions to the group.

You create a new GPO named GPO1 from Starter_GPO1.

You need to identity which action can he performed by the members of the GPO Admins group.

What should you identify?

A. Modify the Delegation settings of Starter_GPO1.

B. Modify the Group Policy Preferences in Starter_GPO1.

C. Link a WMI filter to GPO1.

D. Modify the Administrative Templates in GPO1.

Correct Answer: B

Permission rights applied to starter GPO objects are relative to the starter GPO objects only; they are not inherited from actual GPOs created from starter GPOs. B is wrong because Starter GPOs do not have preferences, only Administrative Template policy settings. https://technet.microsoft.com/en-us/library/cc753200.aspx

QUESTION 2

Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1 that runs Windows Server 2012 P.2. Server1 has the Network Policy and Access Services server role installed.

Your company\\'s security policy requires that certificate-based authentication must be used by some network services.

You need to identify which Network Policy Server (NPS) authentication methods comply with the security policy.

Which two authentication methods should you identify? (Each correct answer presents part of the solution. Choose two.)

A. MS-CHAP

B. PEAP-MS-CHAP v2

C. Chap

D. EAP-TLS

E. MS-CHAP v2

Correct Answer: BD

PEAP is similar in design to EAP-TTLS, requiring only a server-side PKI certificate to create a secure TLS tunnel to protect user authentication, and uses server-side public key certificates to authenticate the server. When you use EAP with a strong EAP type, such as TLS with smart cards or TLS with certificates, both the client and the server use certificates to verify their identities to each other.

QUESTION 3

Your network contains an Active Directory domain. A Group Policy object (GRO) named GPO1 is linked to the domain. GPO1 has the settings shown in the following table. Policy Policy setting Enforce password history 5 passwords remembered Minimum password length 10 characters You import the backup of a GPO named GPO named GPO2. GPO2 has the settings shown in the following table. Policy Policy setting Minimum password length 5 characters Store passwords using reversible encryption Enabled You import the backup of GPO2 into GPO1. You need to identify the configurations in GPO1. What should you identify?

A
- Minimum password length is set to 5 characters.
- Enforce password history is set to 5 passwords remembered.
- Store passwords using reversible encryption is set to Enabled.

B
- Minimum password length is set to 10 characters.
- Enforce password history is set to 5 passwords remembered.
- Store passwords using reversible encryption is set to Not Enabled.

C
- Enforce password history is set to Not Defined.
- Minimum password length is set to 5 characters.
- Store passwords using reversible encryption is set to Enabled.

D
- Enforce password history is set to Not Defined.
- Minimum password length is set to 10 characters.
- Store passwords using reversible encryption is set to Enabled.

A. Option A

B. Option B

C. Option C

D. Option D

Correct Answer: C

QUESTION 4

Your network contains an Active Directory domain named adatum.com. The domain contains a file server named Server1 that runs Windows Server 2012 R2.

All client computers run Windows 7.

You need to ensure that user settings are saved to \\Server1\Users\.

What should you do?

A. From the properties of each user account, configure the Home folder settings.

B. From a Group Policy object (GPO), configure the Folder Redirection settings.

C. From the properties of each user account, configure the User profile settings.

D. From a Group Policy object (GPO), configure the Drive Maps preference.

Correct Answer: C

If a computer is running Windows 2000 Server or later on a network, users can store their profiles on the server. These profiles are called roaming user profiles.

QUESTION 5

You have a server named Server1 that runs Windows Server 2012 R2. Server1 has the File Server Resource Manager role service installed. Server1 has a folder named Folder1 that is used by the sales department.

You need to ensure that an email notification is sent to the sales manager when a File Screening Audit report is generated.

What should you configure on Server1?

A. a file group

B. a file screen

C. a file screen exception

D. a storage report task

Correct Answer: D

From the Storage Reports Management node, you can generate reports that will help you understand file use on the storage server. You can use the storage reports to monitor disk usage patterns (by file type or user), identify duplicate files and dormant files, track quota usage, and audit file screening.
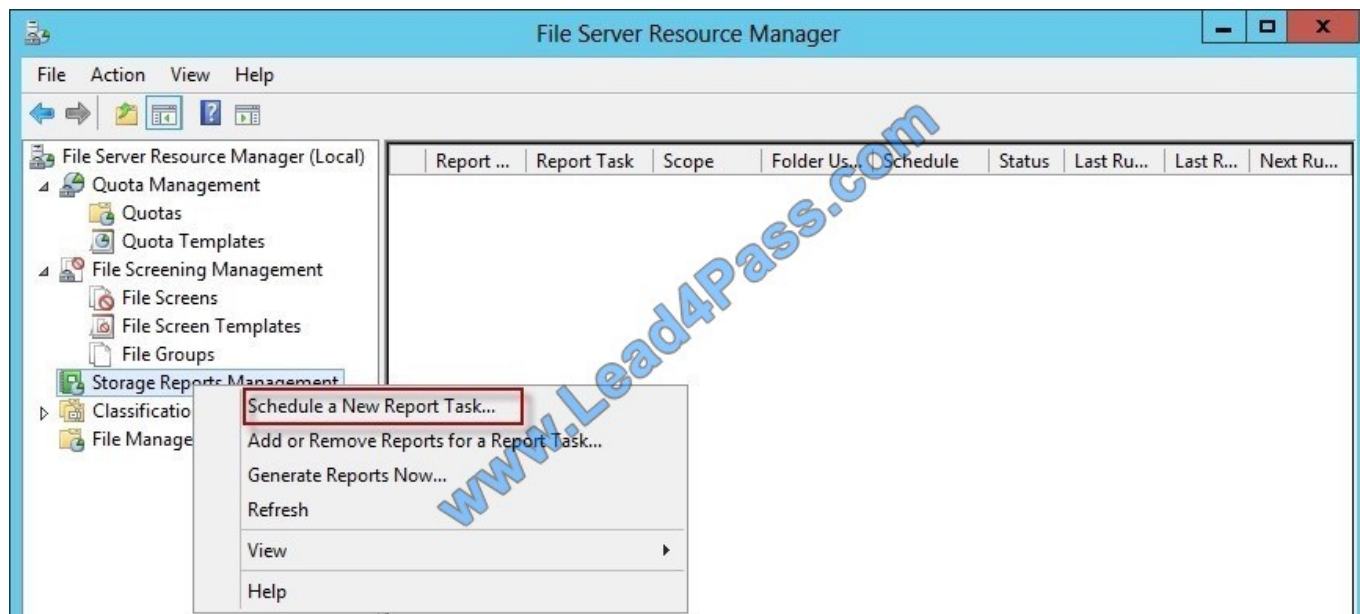

Before you run a File Screen Audit report, in the File Server Resource Manager Options dialog box, on the File Screen Audit tab, verify that the Record file screening activity in the auditing database check box is selected.
