QUESTION 1

This question consists of two statements: One is named Assertion and the other is named Reason. Both of these statements may be true: both may be false; or one may be true, while the other may be false.

To answer this question, you must first evaluate whether each statement is true on its own. If both statements are true, then you must evaluate whether the Reason (the second statement) correctly explains the Assertion (the

first statement). You will then select the answer from the list of answer choices that matches your evaluation of the two statements.

Assertion:

You can run the RENDOM command on the GIA-DC domain controller to rename the domain.

Reason:

The RENDOM command is installed as part of the Active Directory Domain Services role when you promote a server to the domain controller role. The command allows you to rename the domain.

Evaluate the Assertion and Reason statements and choose the correct answer option.

A. Both the Assertion and Reason are true, and the Reason is the correct for the Assertion.

B. Both the Assertion and Reason are true but the Reason is not the correct for the Assertion.

C. The Assertion is true, but the Reason is false.

D. The Assertion is false, but the Reason is true.

E. Both the Assertion and Reason false.

Correct Answer: A

QUESTION 2

You need to recommend a fault-tolerant solution for the VPN. The solution must meet the technical requirements.

What should you include in the recommendation?

A. Network adapter teaming

B. Network Load Balancing (NLB)

C. Failover Clustering

D. DirectAccess

Correct Answer: B

*

Scenario: Core networking services in each office must be redundant if a server fails.

*

The Network Load Balancing (NLB) feature distributes traffic across several servers by using the TCP/IP networking protocol. By combining two or more computers that are running applications into a single virtual cluster, NLB provides reliability and performance for web servers and other mission-critical servers.

QUESTION 3

Your network contains an Active Directory domain named contoso.com.

Your company has 100 users in the sales department. Each sales user has a domain-joined laptop computer that runs either Windows 7 or Windows 8. The sales users rarely travel to the company\\'s offices to connect directly to the corporate

network.

You need to recommend a solution to ensure that you can manage the sales users\\' laptop computers when the users are working remotely.

What solution should you include in the recommendation?

A. Deploy the Remote Access server role on a server on the internal network.

B. Deploy the Network Policy and Access Services server role on a server on the internal network.

C. Deploy a Microsoft System Center 2012 Service Manager infrastructure.

D. Deploy a Microsoft System Center 2012 Operations Manager infrastructure.

Correct Answer: A

The question is asking what you should INCLUDE in your recommendation; it is not asking for the complete solution.

QUESTION 4

Your network contains an Active Directory domain named contoso.com.

All client computers run Windows 10.

Some users work from customer locations, hotels, and remote sites. The remote sites often have firewalls that limit connectivity to the Internet.

You need to recommend a VPN solution for the users.

Which protocol should you include in the recommendation?

A. PPTP

B. SSTP

C. IKEv2

D. L2TP/IPSec

Correct Answer: B

Secure Socket Tunneling Protocol (SSTP) is a form of VPN tunnel that provides a mechanism to transport PPP or L2TP traffic through an SSL 3.0 channel. SSL provides transport-level security with key-negotiation, encryption and traffic integrity checking. The use of SSL over TCP port 443 allows SSTP to pass through virtually all firewalls and proxy servers except for authenticated web proxies.

QUESTION 5

Your network contains an Active Directory domain named contoso.com. All servers run either Windows Server 2008 R2 or Windows Server 2012.

Your company uses IP Address Management (IPAM) to manage multiple DHCP servers. A user named User1 is a member of the IPAM Users group and is a member of the local Administrators group on each DHCP server.

When User1 edits a DHCP scope by using IPAM, the user receives the error message shown in the exhibit.

You need to prevent User1 from receiving the error message when editing DHCP scopes by using IPAM. What should you do?

A. Add User1 to the DHCP Administrators group on each DHCP server.

B. Add User1 to the IPAM Administrators group.

C. Run the Set-IpamServerConfig cmdlet.

D. Run the Invoke-IpamGpoProvisioning cmdlet.

Correct Answer: B

IPAM Administrators: IPAM Administrators have the privileges to view all IPAM data and perform all IPAM tasks.
