QUESTION 2

You work as a Network Administrator for ABC.com. The network consists of a single Windows Server 2012 Active Directory Domain Services (AD DS) domain named ABC.com. All servers in the domain run Windows Server 2012.

You plan to implement a VPN solution to enable external users to connect to resources within the corporate network. You install a Windows Server 2012 server running the Routing and Remote Access (RRAS) role. Some external users will

connect to the VPN using domain-joined portable computers while other users will connect from their home computers that are not members of the domain. The client computers run a mix of Windows XP, Windows 7 or Windows 8.

You need to implement a solution to configure all client computers with the appropriate settings to connect to the VPN. You install the Connection Manager Administration Kit (CMAK).

Which two of the following actions should you perform next? (Choose two.)

- A. Configure a RemoteApp application package.
- B. Configure a Connection Profile package.
- C. Publish the package in a Group Policy Object (GPO).
- D. Publish the package in an Extranet Web Site.
- E. Configure a logon script to install the package.

Correct Answer: BD

QUESTION 3

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some questions sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will not be able to return to it. As a result, these questions will not appear in the review screen.

You need to configure the Group Policy for salespeople.

Solution: You create a domain security group named SalesDevices and add all client devices to this group. You also create one Group Policy object (GPO) that has an AppLocker policy rule that applies to SalesDevices. You link the GPO to

the root of the domain.

Does this meet the goal?

- A. Yes
- B. No

Correct Answer: B

The GPO should not apply to the desktop computers.

QUESTION 4

DRAG DROP

Your network contains an Active Directory domain named contoso.com. The domain contains an IP Address Management (IPAM) server.

You plan to delegate the administration of IPAM as shown in the following table.

Department name	Requirement
Dept1	View IP address tracking information
Dept2	View IP address spaces
Dept3	Create an IP address block

You need to recommend which IPAM security group must be used for each department. The solution must minimize the number of permissions assigned to each group.

What should you recommend?

To answer, drag the appropriate group to the correct department in the answer area. Each group may be used once, more than once, or not at all. Additionally, you may need to drag the split bar between panes or scroll to view content.

Select and Place:

Correct Answer:

*

IPAM IP Audit Administrators: Members of this group have IPAM Users privileges and can perform IPAM common management tasks and can view IP address tracking information.

*

IPAM Users: Members of this group can view all information in server discovery, IP address space, and server management. They can view IPAM and DHCP server operational events, but cannot view IP address tracking

information.

*

IPAM ASM Administrators: IPAM address space management (ASM) administrators have IPAM Users privileges and can perform IPAM common management tasks and IP address space tasks. Reference: Walkthrough: Demonstrate IPAM in Windows Server 2012

QUESTION 5

The network contains an Active Directory forest that has three domains. All domain controllers run Windows Server 2012.

You need to recommend a solution to control which attributes are replicated to global catalog servers in the forest.

What should you include in the recommendation?

- A. the filtered attribute set
- B. application directory partitions
- C. the partial attribute set
- D. constrained delegation

Correct Answer: A
