QUESTION 1

You use the entire System Center suite. You integrate Service Manager with Operations Manager, Virtual Machine Manager, Orchestrator, and Active Directory. You perform all remediation by using

Orchestrator runbooks. An application experiences performance problems on a periodic basis.

You have the following requirements:

A new incident must be opened when System Center Operations Manager (SCOM) detects a performance problem.

The incident must be closed when the performance problem is resolved.

The incident must be associated with the HR performance problem in Service Manager.
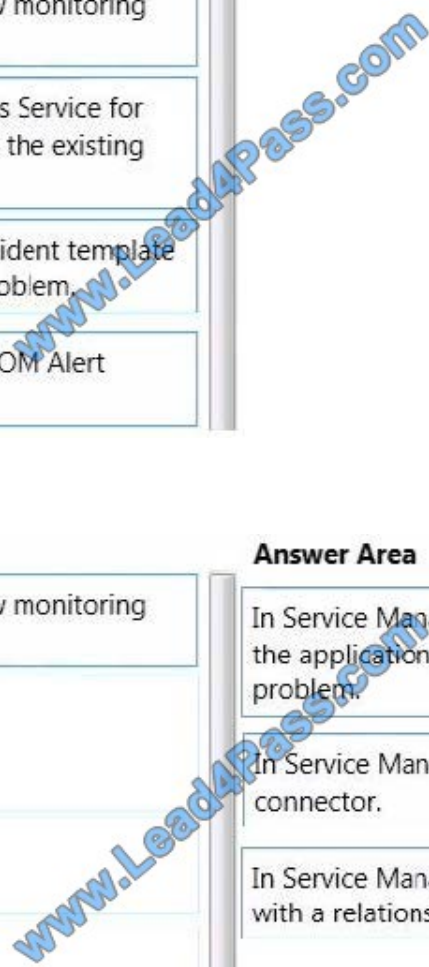

You need to configure the environment.

Select and Place:

Actions	Answer Area
In Operations Manager, create a new monitoring rule that creates an alert.	
In Service Manager, create a Business Service for the application, and associate it with the existing problem.	
In Service Manager, create a new incident template with a relationship to the existing problem.	
In Service Manager, create a new SCOM Alert connector.	

Correct Answer:

Actions	Answer Area
In Operations Manager, create a new monitoring rule that creates an alert.	In Service Manager, create a Business Service for the application, and associate it with the existing problem.
	In Service Manager, create a new SCOM Alert connector.
	In Service Manager, create a new incident template with a relationship to the existing problem.

QUESTION 2

Your network contains five servers that run Windows Server 2012 R2.

You install the Hyper-V server role on the servers. You create an external virtual network switch on each server.

You plan to deploy five virtual machines to each Hyper-V server. Each virtual machine will have a virtual network adapter that is connected to the external virtual network switch and that has a VLAN identifier of 1.

Each virtual machine will run Windows Server 2012 R2. All of the virtual machines will run the identical web application.

You plan to install the Network Load Balancing (NLB) feature on each virtual machine and join each virtual machine to an NLB cluster. The cluster will be configured to use unicast only.

You need to ensure that the NLB feature can distribute connections across all of the virtual machines.

Solution: On each Hyper-V server, you create a new private virtual network switch. From the properties of each virtual machine, you add a second virtual network adapter and connect the new virtual network adapters to the new private virtual

network switches.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B

QUESTION 3

Your network contains an Active Directory domain named contoso.com.

The corporate security policy states that when new user accounts, computer accounts, and contacts are added to an organizational unit (OU) named Secure, the addition must be audited.

You need to recommend an auditing solution to meet the security policy.

What should you include in the recommendation? (Each answer presents part of the solution. Choose all that apply.)

A. From the Default Domain Controllers Policy, enable the Audit directory services setting.

B. Create a new Group Policy object (GPO) that is linked to the Secure OU, and then modify the Audit directory services setting.

C. From the Secure OU, modify the Auditing settings.

D. From the Default Domain Controllers Policy, enable the Audit object access setting.

E. From the Secure OU, modify the Permissions settings.

F. Create a new Group Policy object (GPO) that is linked to the Secure OU, and then modify the Audit object access setting.

Correct Answer: AB

QUESTION 4

You need to recommend a solution for managing updates.The solution must meet the technical requirements. What should you include in the recommendation?

A. A System Center 2012 Configuration Manager management point in the main office and a WSUS downstream server in each office

B. A System Center 2012 Configuration Manager software update point in the main office and a System Center 2012 Configuration Manager distribution point in each office

C. A System Center 2012 Configuration Manager management point in the main office and a System Center 2012 Configuration Manager distribution point in each office

D. A WSUS upstream server in the main office and a WSUS downstream server in each office

Correct Answer: B

Business Requirements	Technical Requirements	Virtualization Requirements	All

The company identifies the folowing technical requirements:
- Provide a highly available DHCP solution.
- Maintain a central database that contains the security events from all of the servers.The database must be encrypted.
- Ensure that an administrator in the main office can manage the approval of Windows updates and updates to third-party applications for al of the users.
- Ensure that all of the domain controllers have the ReliableTimeSource registry value in HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Services\W32Time\Parameters set to 1, even if an administrator changes that value manually.

Overview	Existing Environment Network Infrastructure	Current Issues	Planned Changes

The company plans to implement the following changes:
- Replace all of the domain controllers with new servers that run Windows Server 2012.
- Upgrade the CRM application to use a web-based application that connects to the current CRM database. The web application will store session data in the memory of each web server.
- Initially, deploy two front-end web servers to two virtual machines.Additional virtual web servers will be deployed in the future.
- Monitor the availability of the CRM application and create alerts when the overall availability is less than 99 percent.
- Implement Microsoft System Center 2012 to manage the new environment.

Distribution point	A site system role that contains source files for clients to download, such as application content, software packages, software updates, operating system images, and boot images.

QUESTION 5

You need to ensure that all new production Hyper-V virtual machines can be deployed correctly.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions	Answer Area
Create a new logical network.	
Select the **All Hosts** check box, and insert a VLAN with an ID of **30**.	
Add an uplink port profile.	
Create a new logical switch.	
Select the **All Hosts** check box, and insert a VLAN with an ID of **20**.	
Select the **All Hosts** check box, and insert a VLAN with an ID of **40**.	
Add a network site.	

Correct Answer:

Actions

Select the **All Hosts** check box, and insert a VLAN with an ID of **30**.

Select the **All Hosts** check box, and insert a VLAN with an ID of **20**.

Select the **All Hosts** check box, and insert a VLAN with an ID of **40**.

Add a network site.

Answer Area

Create a new logical network.

Create a new logical switch.

Add an uplink port profile.
