### QUESTION 1

Your company has a main office and a branch office.

The network contains an Active Directory domain named contoso.com. The domain contains two servers named Server1 and Server2 that run Windows Server 2012. Server1 has the Windows Server Update Services server role installed and

configured.

Server1 is located in the main office. Server2 is located in the branch office.

You plan to install Windows Server update Services (WSUS) on Server2.

You need to configure the update infrastructure to meet the following requirements:

Only updates approved by the administrator in the main office must be installed on client computers in the branch office.

The local administrator in the branch office must not be able to approve updates. Bandwidth usage between the offices must be minimized.

What should you do?

- A. Configure Server2 as a downstream server in autonomous mode.
- B. On Server1, configure a computer group that contains the client computers in the branch office, and then set the approvals to Automatic.
- C. On Server1, configure a client computer group that contains Server2, and then set the approvals to Automatic.
- D. Configure Server2 as a downstream server in replica mode.

Correct Answer: D

---

### QUESTION 2

Your network contains an Active Directory domain named contoso.com. The domain contains a Virtual Desktop Infrastructure (VDI) and pooled virtual desktops.

Users start virtual desktop sessions by using Remote Desktop Web Access (RD Web Access).

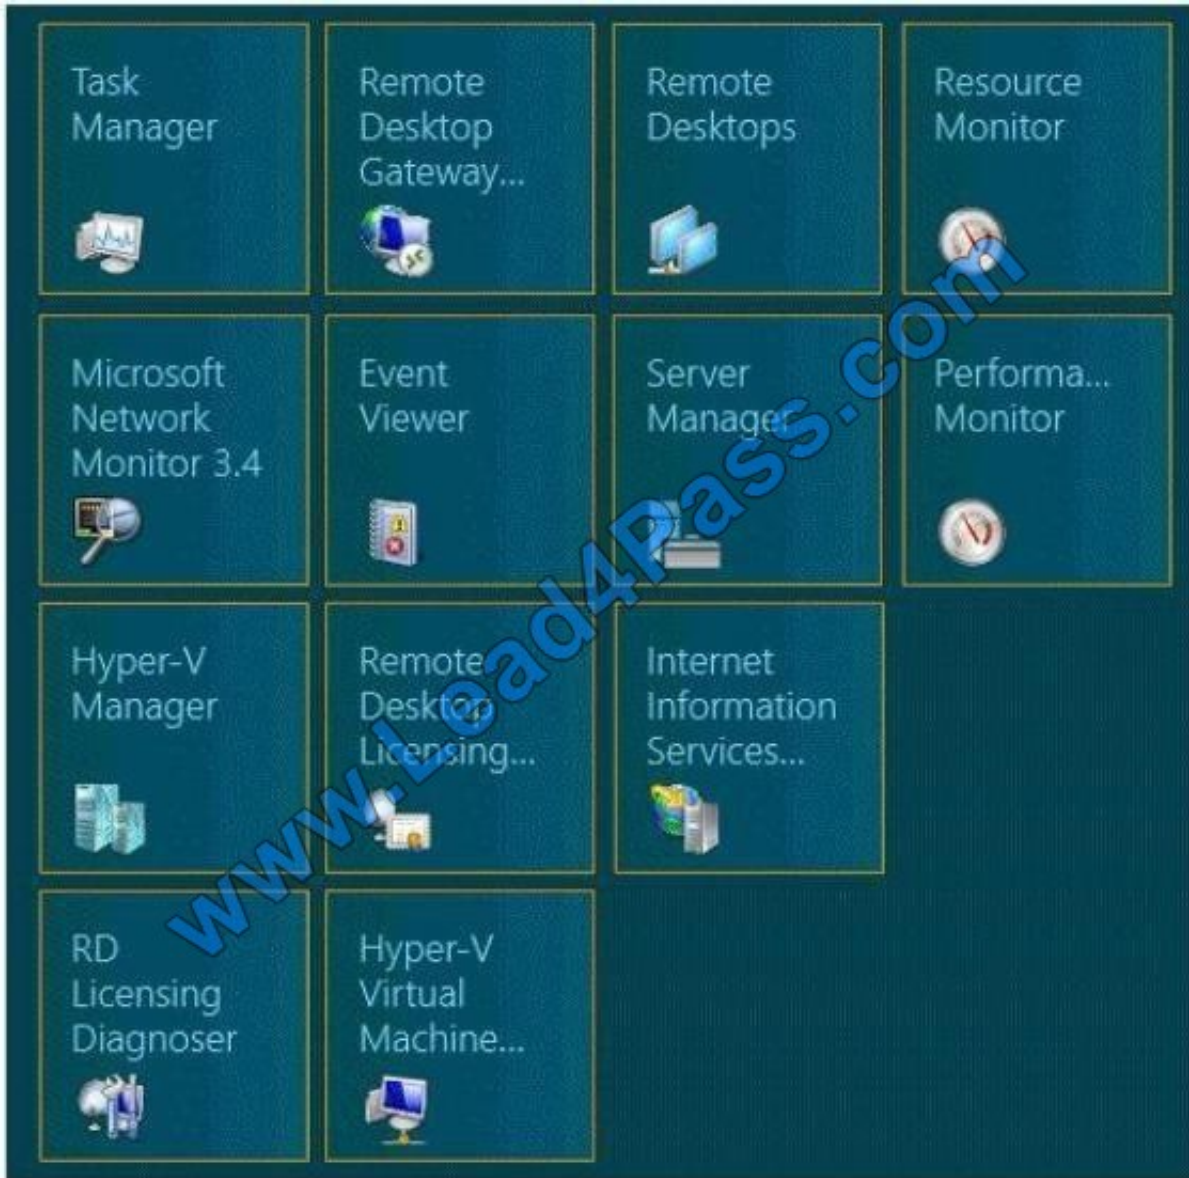

Some users access virtual desktops by using a Remote Desktop Gateway (RD Gateway).

You need to identify which users are connected currently to the virtual desktops.

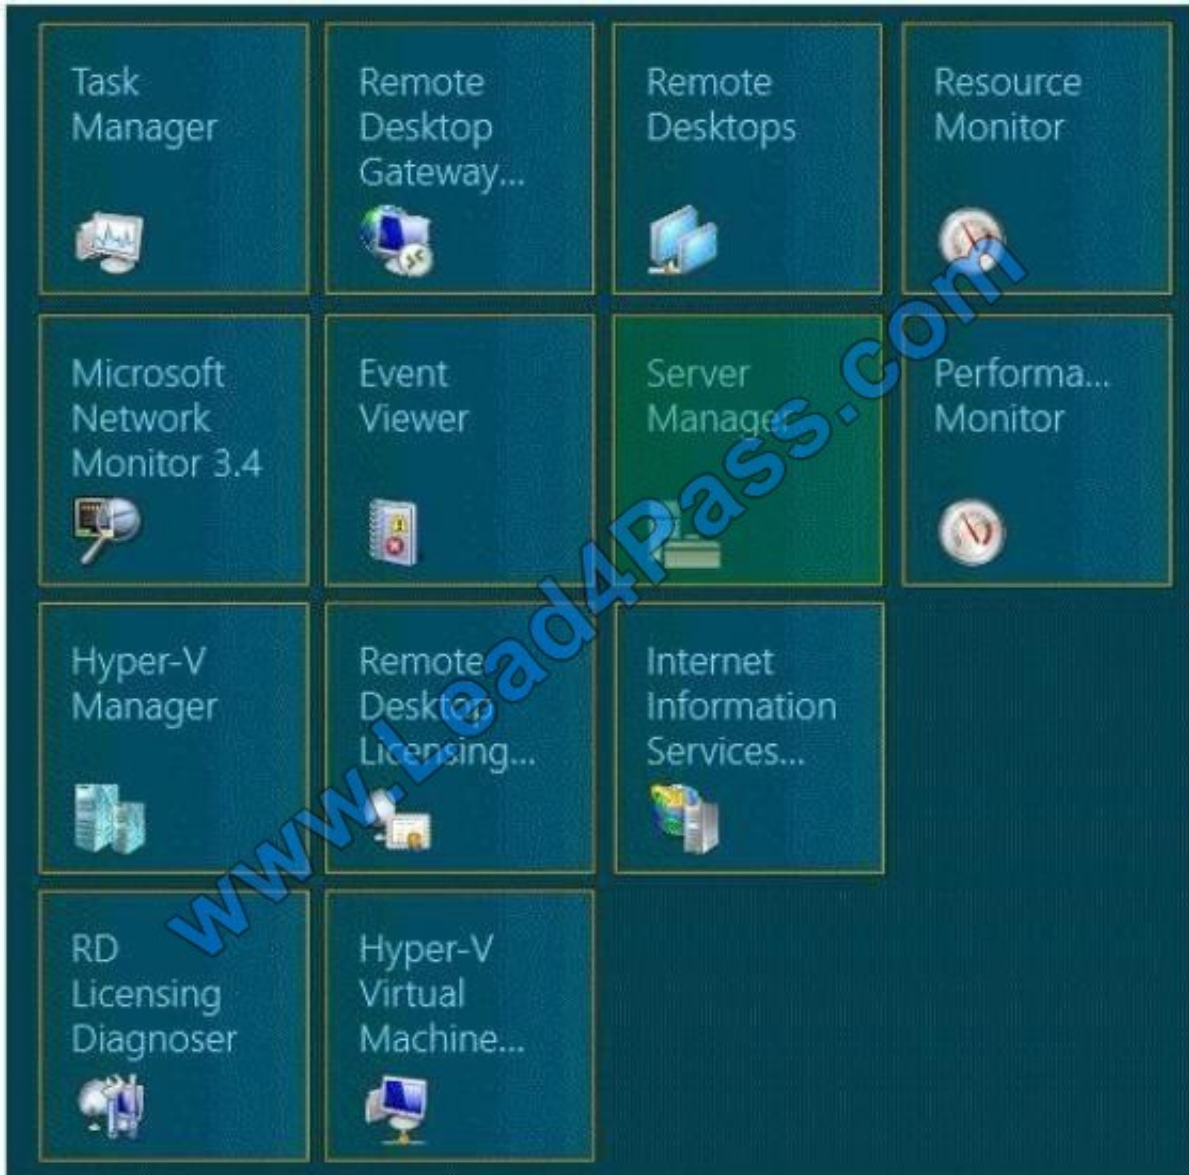

Which tool should you use?

To answer, select the appropriate tool in the answer area.

Hot Area:

Correct Answer:

### QUESTION 3

You manage a pooled virtual desktop collection named Collection1. Collection1 is configured to use user profile disks.

You need to ensure that when users log off of their virtual desktop, the contents of the Downloads, Music, and Pictures folders are deleted. The contents of the other profile folders must be retained.

What should you do?

- A. From a Group Policy object (GPO), modify the Folder Redirection settings.
- B. From the properties of each user account, modify the Remote Desktop Service Profile settings.
- C. From Server Manager, modify the properties of Collection1.

D. From the properties of each user account, modify the Sessions settings.

Correct Answer: C

---

#### QUESTION 4

Your network contains an Active Directory domain named contoso.com. The domain contains an enterprise certification authority (CA). You plan to implement Encrypting File System (EFS) to encrypt data on the client computer of each user.

You need to recommend a solution to provide your company's internal auditors with the ability to decrypt any encrypted files on the client computers.

What should you recommend?

More than one answer choice may achieve the goal. Select the BEST answer.

- A. Add the auditors to the local Administrators group on each client computer.
- B. Provide the auditors with access to a key recovery agent certificate.
- C. Add the auditors to the Domain Admins group.
- D. Provide the auditors with access to a data recovery agent certificate.

Correct Answer: D

---

#### QUESTION 5

Your network contains an Active Directory domain named contoso.com. The domain has Microsoft System Center 2012 Configuration Manager deployed.

All client computers run Windows XP.

Your company plans to replace all of the client computers with new computers that run Windows 8.

You need to recommend which Configuration Manager system role must be deployed to capture the local application data from the Windows XP computers, and then deploy the local application data to the Windows 8 computers.

Which system role should you recommend?

To answer, select the appropriate system role in the answer area.
