### QUESTION 1

Your network contains an Active Directory domain named contcsc.com. The domain contains a server named Gateway1 that has the Remote Desktop Gateway role service installed.

You need to ensure that all of the users who connect to the Remote Desktop Session Host (RD Session Host) servers by using Gateway1 receive a custom logon message. The solution must prevent the message from appearing when the users connect to the RD Session Host servers directly.

What should you configure from Remote Desktop Gateway Manager?

- A. The RD Gateway-managed computer groups
- B. The properties of Gateway1
- C. The Remote Desktop resource authorization policies (RD RAPs)
- D. The Remote Desktop connection authorization policies (RD CAPs)

Correct Answer: B

---

### QUESTION 2

You need to recommend a WSUS topology that meets the security requirements. What should you do?

- A. In the London office, install a WSUS server in replica mode. In the New York office, install a WSUS server in replica mode.
- B. In the London office, install a WSUS server in replica mode. In the New York office, install a WSUS server in autonomous mode.
- C. In the London office, install a WSUS server in autonomous mode. In the New York office, install a WSUS server in replica mode.
- D. In the London office, install a WSUS server in autonomous mode. In the New York office, install a WSUS server in autonomous mode.

Correct Answer: B

---

### QUESTION 3

You need to recommend an application deployment method for App2 that meets the application requirements.

Which method should you recommend?

- A. Group Policy software installation
- B. A RemoteApp program
- C. A Microsoft Application Virtualization (App-V) package

D. A Client Hyper-V virtual machine

Correct Answer: B

#### QUESTION 4

Your network contains an Active Directory domain named contoso.com. The domain contains two servers named Server1 and Server2 that have Microsoft Deployment Toolkit (MDT) 2012 installed. Server1 is used for testing and Server2 is

used to deploy images to production computers.

On Server1, you have several deployments of Windows 7 and Windows 8.

You need to replicate only the content related to the Windows 8 deployments from Server1 to Server2.

What three actions should you perform from the Deployment Workbench?

To answer, move the three appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions	Answer Area
On Server1, create a linked deployment share.	
On Server2, create a linked deployment share.	
On Server1, create a selection profile.	
On Server2, run Update Deployment Share.	
On Server2, create a selection profile.	
On Server2, run Replicate Content.	
On Server1, run Replicate Content.	
On Server1, run Update Deployment Share.	

Correct Answer:

Actions	Answer Area
	On Server2, create a selection profile.
On Server2, create a linked deployment share.	On Server1, create a linked deployment share.
On Server1, create a selection profile.	On Server1, run Replicate Content.
On Server2, run Update Deployment Share.	
On Server2, run Replicate Content.	
On Server1, run Update Deployment Share.	

Note:

\* When you replicate a deployment share, you can replicate everything or you can choose which folders in the deployment share to replicate. You choose folders to replicate by creating selection profiles. A selection profile simply selects folders across applications, operating systems, out-of-box drivers, packages, and task sequences. You create a selection profile in advance, and then you choose that selection profile when you set up replication.

### QUESTION 5

Your network contains an Active Directory domain named contoso.com. The domain contains three servers that are part of a Remote Desktop Services (RDS) deployment. The servers are configured as shown in the following table.

Server name	Roleservice
Server1	Remote Desktop Connection Broker
Server2	Remote Desktop Web Access
Server3	Remote Desktop Virtualization Host

You install a server named Server4 that runs Windows Server 2012.

You need to configure Server4 as a Remote Desktop Gateway (RD Gateway) server. The solution must ensure that a third-party certificate is used to encrypt connections to Server4.

Which three actions should you perform from Server Manager on Server4? To answer, move the three appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions	Answer Area
Select the third-party certificate.	
Add an RD Gateway server to the RDS deployment.	
Add Server1 to the server pool.	
Add Server2 to the server pool.	
Add Server3 to the server pool.	

Correct Answer:

Actions	Answer Area
	Add an RD Gateway server to the RDS deployment.
	Add Server3 to the server pool.
Add Server1 to the server pool.	Select the third-party certificate.
Add Server2 to the server pool.	

Note:

\* To configure RD Gateway settings

1. On the RD Connection Broker server, open Remote Desktop Connection Manager. To open Remote Desktop Connection Manager, click Start, point to Administrative Tools, point to Remote Desktop Services, and then click Remote

Desktop Connection Manager.

2. (box 2) In the left pane, click RD Virtualization Host Servers, and then on the Action menu, click Properties.

3. In the Virtual Desktops Properties dialog box, on the RD Gateway Settings tab, configure the desired RD Gateway behavior. You can configure whether to automatically detect RD Gateway server settings, to use RD Gateway server settings that you specify, or to not use an RD Gateway server. If you select Automatically detect RD Gateway server settings, the client tries to use Group Policy settings to determine the behavior of client connections to RD Gateway.

If you select Use these RD Gateway server settings, do the following:

a. Configure the RD Gateway server name and the logon method.

(box 3) The server name must match what is specified in the Secure Sockets Layer (SSL) certificate for the RD Gateway server.

Etc

\* The server name must match what is specified in the Secure Sockets Layer (SSL) certificate for the RD Gateway server.

\* You can specify whether users connect to virtual desktops by using Remote Desktop Gateway (RD Gateway). These settings are applied when a user connects to a virtual desktop pool or a personal virtual desktop through RemoteApp and

Desktop Connection. The RD Gateway settings apply to both virtual desktop pools and personal virtual desktops.
