QUESTION 1

Your network contains an Active Directory domain named contoso.com. You plan to deploy personal virtual desktops.

You create a standard desktop that contains multiple desktop shortcuts to line-of-business applications. Administrators frequently update the desktop shortcuts.

You need to recommend a solution to prevent users from modifying the desktop shortcuts and from adding additional files to the desktop.

What should you include in the recommendation?

More than one answer choice may achieve the goal. Select the BEST answer.

- A. Roaming profiles and NTFS permissions
- B. Mandatory profiles
- C. User profile disks
- D. Folder Redirection and NTFS permissions

Correct Answer: D

QUESTION 2

Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1 that has Microsoft System Center 2012 Configuration Manager installed.

All client computers run Windows 7.

You plan to deploy Windows 8 to all of the client computers.

You discover that the Client Replace Task Sequence task sequence is unavailable from the Configuration Manager console.

You need to ensure that the Client Replace Task Sequence task sequence is available from Configuration Manager.

What should you install on Server1?

- A. The Windows Automated Installation Kit (Windows AIK)
- B. The System Center 2012 Configuration Manager Toolkit
- C. The Windows Assessment and Deployment Kit (Windows ADK)
- D. Microsoft Deployment Toolkit (MDT) 2012

Correct Answer: D

QUESTION 3

You need to prepare a virtual machine template that meets the VDI requirements. What should you do?

- A. Run `dism.exe` and specify the `/image` parameter.
- B. Run `dism.exe` and specify the `/export-image` parameter.
- C. Run `sysprep.exe` and specify the `/audit` parameter.
- D. Run `sysprep.exe` and specify the `/generalize` parameter.

Correct Answer: D

QUESTION 4

Your network contains an Active Directory domain named `contoso.com`. The domain contains a file server named `Server1`. `Server1` contains a shared folder named `Share1`.

The domain has Microsoft System Center 2012 Configuration Manager deployed. All client computers run Windows 7.

You plan to upgrade all of the client computers in the marketing department to Windows 8. You will migrate the user settings by using the User State Migration Tool (USMT).

You need to capture the user state on each client computer. The solution must exclude offline files from the captured data.

Which three actions should you perform?

To answer, move the three appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions	Answer Area
Modify the <code>Miguser.xml</code> file.	
Run <code>scanstate.exe /genconfig:config.xml</code> .	
Modify the <code>Config.xml</code> file.	
Run <code>scanstate.exe \\server1\share1 config:config.xml</code> .	
Run <code>scanstate.exe /offline:config.xml</code> .	

Correct Answer:

Actions	Answer Area
Modify the Miguser.xml file.	Run scanstate.exe /genconfig:config.xml.
	Modify the Config.xml file.
	Run scanstate.exe \\server1\share1 / config:config.xml.
Run scanstate.exe /offline:config.xml.	

Finally, we run the ScanState command on the source computer to collect files and settings. You should specify all of the .xml files that you want the ScanState command to use. For example,

```
scanstate \\server\migration\mystore /config:config.xml /i:migdocs.xml /i:migapp.xml /v:13 /l:scan.log
```

Reference: Getting Started with the User State Migration Tool (USMT)

QUESTION 5

Your network contains an Active Directory domain named contoso.com. The domain contains two servers named Server1 and Server2 that run Windows Server 2008 R2.

You install Microsoft System Center 2012 Configuration Manager on Server1.

You need to ensure that you can perform bare metal installations of Windows 8 over the network.

What should you do? (Each correct answer presents part of the solution. Choose all that apply.)

- A. From Server Manager on Server2, install the Application Server server role.
- B. From the Configuration Manager console, add Server2 as a distribution point.
- C. From Server Manager on Server2, install the Windows Internal Database feature.
- D. From the Configuration Manager console, enable PXE support for clients.
- E. From Active Directory Users and Computers, configure the delegation settings of the Server2 computer account.
- F. From Active Directory Users and Computers, configure the delegation settings of the Server1 computer account.

Correct Answer: AB
