-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

QUESTION 1

You maintain a SQL Server 2008 instance. You plan to deploy an instance of SQL Server Reporting Services (SSRS) to the same machine. You need to ensure that by default, SSRS maintains version histories of all deployed reports. What should you do?

- A. Configure the SSRS database to use Native mode.
- B. Configure the SSRS database to use SharePoint integrated mode.
- C. Install the SSRS instance by using the http.sys listener.
- D. Install the SSRS instance by using the Internet Information Services default Web site.

Correct Answer: B

QUESTION 2

You maintain a SQL Server 2008 instance. The SQL Server instance is configured to use the T1222 and T1204 trace flags during startup. You need to ensure that your failure recovery plan backs up the use of the trace flags. What should you do?

- A. Backup the default.trc file.
- B. Backup the master database.
- C. Backup the resource database.
- D. Backup the SQL Server registry hive.

Correct Answer: D

QUESTION 3

You administer a SQL Server 2008 instance. The instance contains a database named DB1. You plan to allow all the application developers to use SQL Server Profiler to capture traces to troubleshoot the application that uses the database DB1. You need to grant the minimum necessary permission to the application developers. What should you do?

- A. Grant the appropriate database-level permissions to all database users of the application developers.
- B. Grant the appropriate server-level permissions to all SQL Server logins of the application developers.
- C. Add all the database users of the application developers to a fixed database role.
- D. Add all the SQL Server logins of the application developers to a fixed server role.

Correct Answer: B

QUESTION 4

You administer three SQL Server 2008 instances named Instance1, Instance2, and Instance3. Each of the three instances runs on a separate server. A mission-critical database is mirrored between Instance1 and Instance2. Instance3 acts

as the witness. Instance1 currently acts as the Principal. You plan to apply a patch to both servers. The patch requires a restart of the server. You need to find out the sequence of steps necessary to ensure that the following requirements are

met:

The patching process is completed in the shortest possible time. The database is online on the partner that currently does not apply the patch. The database does not failover to the other partner during this time.

What should you do?

- A. Apply the patch to the server that runs Instance2. Apply the patch to the server that runs Instance1.
- B. Apply the patch to the server that runs Instance2. Manually failover the mirroring session. Apply the patch to the server that runs Instance1.
- C. Remove the mirroring session. Apply the patch to the server that runs Instance2. Apply the patch to the server that runs Instance1. Re-establish the mirroring session.
- D. Suspend the mirroring session. Apply the patch to the server that runs Instance2. Resume the mirroring session. Manually failover the mirroring session. Apply the patch to the server that runs Instance1.

Correct Answer: D

QUESTION 5

You administer several SQL Server 2008 instances.

You need to ensure that all SQL Server instances are consistently configured for the following aspects:

Naming conventions

Security settings

Force index creation

Avoidance of data fragmentation

What should you do?

- A. Use the Database Engine Tuning Advisor.
- B. Use the SQL Server Configuration Manager.
- C. Create a policy in Microsoft SQL Server Management Studio.
- D. Create a maintenance plan in Microsoft SQL Server Management Studio.

Correct Answer: C
