QUESTION 1

You are the database administrator for your company. You manage a SQL Server 2005 database named Sales. You are given a SQL Server Profiler sample workload with queries to the Sales database on a typical day. You need to evaluate the effectiveness of current indexing and the identify changes that would be appropriate.

What should you do first?

- A. Use the Index Tuning Wizard with the sample workload.
- B. Use SQL Server Profiler to run the sample workload.
- C. Create a query with the five stored procedures that are used the most frequently. Then click the Analyze Query in Database Engine Tuning Advisor button.
- D. Use the Database Engine Tuning Advisor (DTA) with the sample workload.

Correct Answer: D

QUESTION 2

You are the administrator of a SQL Server 2005 computer named SQL1. SQL1 hosts a database named DB1. DB1 serves as the backend database for an application that tracks issues that help desk technicians receive and the associated trouble tickets. When installed, the help desk application loaded several stored procedures and views that are used for data manipulation and reporting purposes. DB1 contains more than 50 tables. The bulk of the data is stored within the Employees, Issues, Assets, and AssetTracker tables. An application developer inadvertently deletes the AssetTracker table in DB1. The AssetTracker table is referenced by several views and functions in the database. You need to ensure that users are not able to remove critical tables such as this that are referenced by views or functions.

What should you do?

- A. Identify the dependencies of each view and function. Configure the DENY-CONTROL permission for the Public role on each critical table listed as a dependency.
- B. Create a new read-only filegroup for DB1 and move all tables to the new filegroup.
- C. Identify the dependencies of each critical table. Alter the syntax of each view and function to include the SCHEMABINDING syntax.
- D. Use the ALTER SCHEMA Transact-SQL statement to add all critical tables to the same schema. Configure the DENY-DELETE permission for the Public role on the schema.

Correct Answer: C

QUESTION 3

You are a database administrator for Company.com. Developers need access to create, alter, and drop tables in your

SQL Server 2005 database. A list of production tables is maintained in a table named Valid_Production_Tables in the database. You need to be able to automatically roll back any commands that drop or alter current production tables. You need to do this while minimizing the processor resources being used.

What should you do?

- A. Use a DML trigger to execute the FOR UPDATE, DELETE command on the Valid_Production_Tables table.
- B. Use Event Notification to execute the FOR DDL_TABLE_EVENTS command.
- C. Use Event Notification to execute the FOR ALTER_TABLE, DROP_TABLE command.
- D. Use a DDL trigger to execute the FOR DROP_TABLE, ALTER_TABLE command.

Correct Answer: D

QUESTION 4

You need to design a high-availability strategy for the proseware_projects database. Your design must fulfill all business and technical requirements. Which strategy should you use?

- A. log shipping
- B. failover clustering
- C. database mirroring
- D. replication

Correct Answer: C

QUESTION 5

You work as DBA at Company.com. You administer a SQL Server 2005 computer named Company A. Every Sunday, Company A executes a job that performs a full backup of a database named HR. Each weeknight, Company A executes a job that performs differential backups. All jobs have the option enabled to verify data in the backup. The HR database is often not able to be restored after a failure, because of errors with the data stored on the tape. You need to design a restore process that ensures that as much data as possible is restored, even when errors occur.

What should you do?

- A. Create a database restore process by using Transact-SQL. Include the CONTINUE_AFTER_ERROR option.
- B. Create a database restore process by using SQL Distributed Management Objects (SQL- DMO). Set the ReplaceDatabase property to True.
- C. Create a database restore process by using SQL Server Management Studio. Enable the option to Prompt before restoring each backup.

D. Create a database restore process by using Transact-SQL. Include the CHECKSUM option.

Correct Answer: A
