QUESTION 1

Note: This question is part of a series of questions that use the same set of answer choices. An answer choice may be correct for more than one question in the series.

You administer a SQL Server 2012 server that contains a database named SalesDb. SalesDb contains a schema named Customers that has a table named Regions. A user named userA is a member of a role named Sales.

UserA is granted the Select permission on the Regions table and the Sales role is granted the Select permission on the Customers schema. You need to ensure that the Sales role, including userA, is disallowed to select from the Regions table.

- A. DENY SELECT ON Object::Regions FROM Sales
- B. DENY SELECT ON Schema::Customers FROM Sales
- C. REVOKE SELECT ON Object::Regions FROM Sales
- D. REVOKE SELECT ON Schema::Customers FROM Sales
- E. DENY SELECT ON Object::Regions FROM UserA
- F. DENY SELECT ON Schema::Customers FROM UserA
- G. REVOKE SELECT ON Object::Regions FROM UserA
- H. REVOKE SELECT ON Schema::Customers FROM UserA
- I. EXEC sp_addrolemember \'Sales\', \'UserA\'
- J. EXEC sp_droprolemember \'Sales\', \'UserA\'

Correct Answer: A

QUESTION 2

You are a database administrator for a Microsoft SQL Server 2012 environment.

You need to ensure that for each copy of the database, users are able to read and write data that will then be synchronized between all of the database instances.

Which feature should you use?

- A. peer-to-peer replication
- B. snapshot replication
- C. failover clustering
- D. database audits

Correct Answer: A

QUESTION 3

You administer a Microsoft SQL Server 2012 database.

You use an OrderDetail table that has the following definition:

```
CREATE TABLE [dbo].[OrderDetail]
([SalesOrderID] [int] NOT NULL,
[SalesOrderDetailID] [int] IDENTITY(1,1) NOT NULL,
[CarrierTrackingNumber] [nvarchar](25) NULL,
[OrderQty] [smallint] NOT NULL,
[ProductID] [int] NOT NULL,
[SpecialOfferID] [int] NULL,
[UnitPrice] [money] NOT NULL);
```

You need to create a non-clustered index on the SalesOrderID column in the OrderDetail table to include only rows that contain a value in the CarrierTrackingNumber column.

Which four Transact-SQL statements should you use? (To answer, move the appropriate statements from the list of statements to the answer area and arrange them in the correct order.)

Select and Place:

WHERE
FILTER ON
SpecialOfferID IS NOT NULL;
ON dbo.OrderDetail (SalesOrderID)
ON dbo.OrderDetail (SalesOrderID) AS FILTERED_INDEX
CREATE NONCLUSTERED INDEX FIndx_SpecialOfferID
CREATE NONCLUSTERED FILTERED INDEX FIndx_SpecialOfferID

Correct Answer:

FILTER ON
ON dbo.OrderDetail (SalesOrderID) AS FILTERED_INDEX
CREATE NONCLUSTERED FILTERED INDEX FIndx_SpecialOfferID

CREATE NONCLUSTERED INDEX FIndx_SpecialOfferID
ON dbo.OrderDetail (SalesOrderID)
WHERE
SpecialOfferID IS NOT NULL;

QUESTION 4

You administer three Microsoft SQL Server 2012 servers named ServerA, Servers, and ServerC.

ServerA is the acting principal and ServerB is the mirror.

You need to add ServerC as a witness to the existing mirroring session between ServerA and ServerB. You need to achieve this goal without delaying synchronization. Which three actions should you perform in sequence? (To answer, move

the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Select and Place:

On ServerC, create an endpoint for use by the witness.
Ensure that the same Windows Login exists on each server and grant Connect permissions to each server's endpoint.
On ServerA, alter the principal database to use the endpoint on ServerC as the witness.
On ServerA, pause the mirroring session between ServerA and ServerB.
On ServerB, alter the principal database to use the endpoint on ServerC as the witness.
Ensure that the same Proxy exists on each server and grant Connect permissions to each server's endpoint.
On ServerA, resume the mirroring session between ServerA and ServerB.

Correct Answer:

On ServerC, create an endpoint for use by the witness.

Ensure that the same Windows Login exists on each server and grant Connect permissions to each server's endpoint.

On ServerA, alter the principal database to use the endpoint on ServerC as the witness.

On ServerA, pause the mirroring session between ServerA and ServerB.

On ServerB, alter the principal database to use the endpoint on ServerC as the witness.

Ensure that the same Proxy exists on each server and grant Connect permissions to each server's endpoint.

On ServerA, resume the mirroring session between ServerA and ServerB.

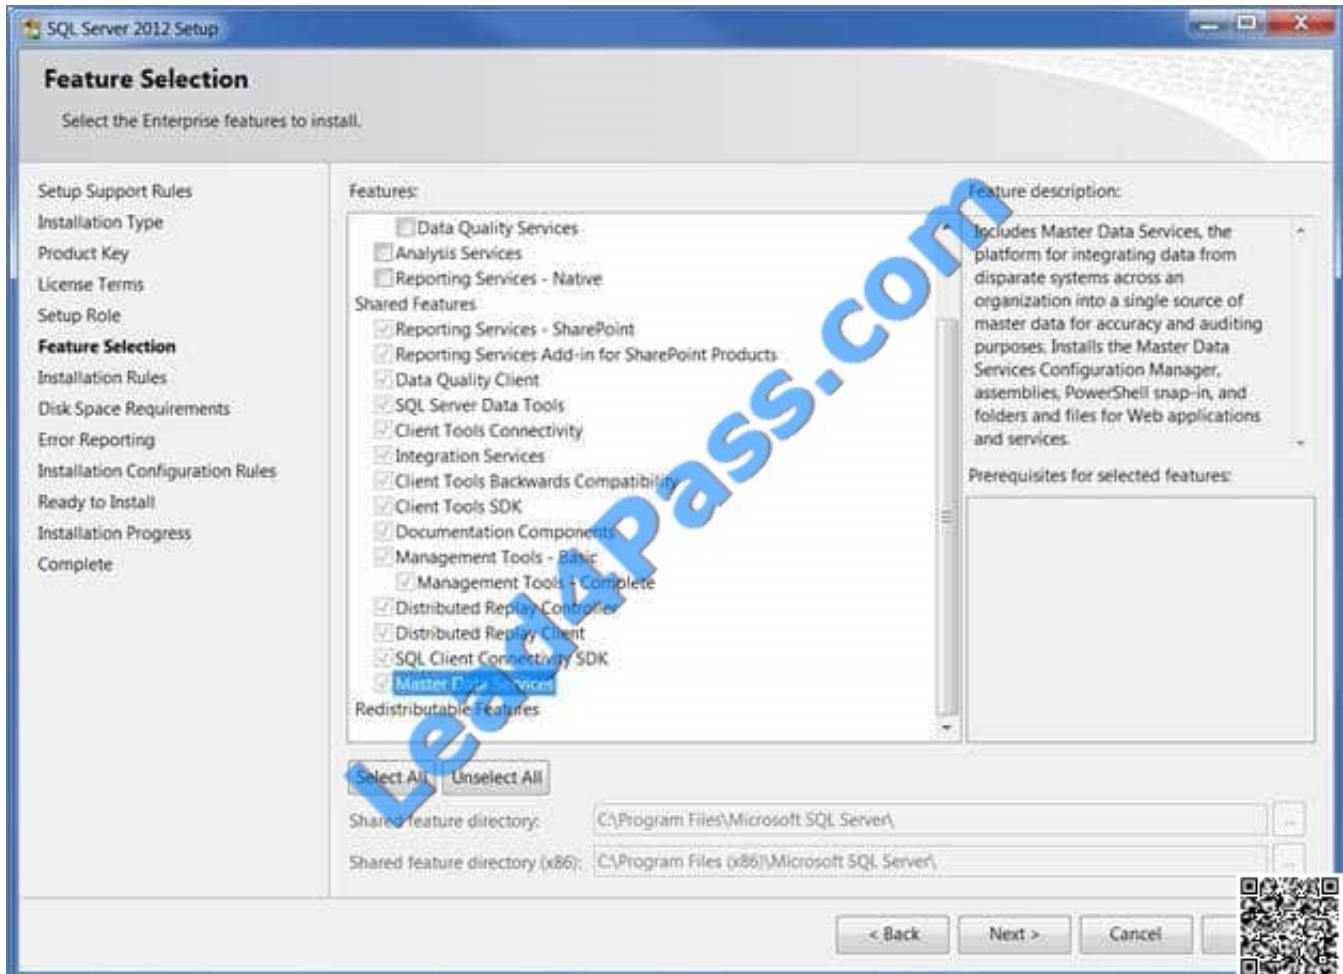

QUESTION 5

You are preparing to install SQL Server 2012 Master Data Services (MDS). You need to ensure that the database requirements are met.

- A. SQL Server 2012 Enterprise (64-bit) x64 on the database server
- B. SQL Server 2008 Enterprise (64-bit) x64 on the database server
- C. Microsoft SharePoint Server 2010 Enterprise Edition SP1
- D. Microsoft SharePoint Foundation 2010 SP1

Correct Answer: A

* Master Data Services is a new feature introduced in SQL Server 2008 R2 and further enhanced in SQL Server 2012.

Note:

* Microsoft SQL Server Master Data Services is a Master Data Management (MDM) product from Microsoft, which will ship as a part of the Microsoft SQL Server database. Originally code-named Bulldog, Master Data Services is the rebranding of the Stratature MDM product titled +EDM, which Microsoft acquired in June 2007. Master Data Services is architecturally similar to +EDM, with increased integration with other Microsoft applications as well as some new features. Master Data Services first shipped with Microsoft SQL Server 2008 R2.
