-  **800,000+** Satisfied Customers

## QUESTION 1

You install Microsoft SQL Server 2012 on a new server.

After setup is complete, you attempt to start the SQL Server service. After being in a starting state for a few moments, the service goes back to a stopped state.

You need to determine the cause of the failure.

Which file should you use?

- A. %programfiles%\Microsoft SQL Server\MSSQL11.MSSQLSERVER\MSSQL\Log\Errorlog
- B. %programfiles%\Microsoft SQL Server\110\Setup Bootstrap\Log\Summary.txt
- C. %programfiles%\Microsoft SQL Server\110\Shared>ErrorDumps\SQLDmpr[XXXX].mdmp
- D. %programfiles%\Microsoft SQL Server\MSSQL11.MSSQLSERVER\MSSQL\DATA\mastlog.ldf

Correct Answer: A

---

## QUESTION 2

### DRAG DROP

You administer a Microsoft SQL Server 2012 database.

All database traffic to the SQL Server must be encrypted by using secure socket layer (SSL) certificates or the connection must be refused.

Network administrators have deployed server certificates to the Windows store of all Windows servers on the network from a trusted Certificate Authority. This is the only Certificate Authority allowed to distribute certificates on the network.

You enable the Force Encryption flag for the MSSQLServer protocols, but client computers are unable to connect. They receive the following error message:

"A connection was successfully established with the server, but then an error occurred during the pre-login handshake, (provider: SSL Provider, error: 0 - The certificate chain was issued by an authority that is not trusted.) (Microsoft SQLServer)"

You notice the following entry in the SQL Server log:

"A self-generated certificate was successfully loaded for encryption."

You need to configure SQL Server to encrypt all client traffic across the network.

You also need to ensure that client computers are able to connect to the server by using a trusted certificate.

Which three actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Select and Place:

Restart the SQL Server.	
Leave the certificate blank in the drop-down list on the <b>Certificates</b> tab.	
Choose the new root-level certificate from the drop-down list on the <b>Certificates</b> tab.	
Install Certificate Services on the SQL Server, and create a new root-level certificate.	
From the SQL Configuration Manager on the SQL Server, open the <b>Protocols</b> properties for the SQL instance.	
Choose the server certificate provided by the network administrators from the drop-down list on the <b>Certificates</b> tab.	
From the SQL Configuration Manager on every client computer that will be connecting to SQL Server, open the <b>Protocols</b> properties for the SQL instance.	

Correct Answer:

Leave the certificate blank in the drop-down list on the <b>Certificates</b> tab.	
Choose the new root-level certificate from the drop-down list on the <b>Certificates</b> tab.	
Install Certificate Services on the SQL Server, and create a new root-level certificate.	
From the SQL Configuration Manager on every client computer that will be connecting to SQL Server, open the <b>Protocols</b> properties for the SQL instance.	
	From the SQL Configuration Manager on the SQL Server, open the <b>Protocols</b> properties for the SQL instance.
	Choose the server certificate provided by the network administrators from the drop-down list on the <b>Certificates</b> tab.
	Restart the SQL Server.

### QUESTION 3

You administer a Microsoft SQL Server 2012 instance that contains a financial database hosted on a storage area network (SAN).

The financial database has the following characteristics:

A data file of 2 terabytes is located on a dedicated LUN (drive D).

A transaction log of 10 GB is located on a dedicated LUN (drive E).

Drive D has 1 terabyte of free disk space.

Drive E has 5 GB of free disk space.

The database is continually modified by users during business hours from Monday through Friday between 09:00 hours and 17:00 hours. Five percent of the existing data is modified each day.

The Finance department loads large CSV files into a number of tables each business day at 11:15 hours and 15:15 hours by using the BCP or BULK INSERT commands. Each data load adds 3 GB of data to the database.

These data load operations must occur in the minimum amount of time.

A full database backup is performed every Sunday at 10:00 hours. Backup operations will be performed every two hours (11:00, 13:00, 15:00, and 17:00) during business hours.

You need to ensure that the minimum amount of data is lost.

Which recovery model should the database use?

- A. FULL
- B. DBO\_ONLY
- C. CONTINUE\_AFTER\_ERROR
- D. CHECKSUM
- E. NO\_CHECKSUM
- F. SIMPLE
- G. Transaction log
- H. SKIP
- I. RESTART
- J. COPY\_ONLY
- K. NORECOVERY
- L. BULK\_LOGGED
- M. Differential
- N. STANDBY

Correct Answer: A

---

#### QUESTION 4

You administer two Microsoft SQL Server 2012 servers. Each server resides in a different, untrusted domain.

You plan to configure database mirroring.

You need to be able to create database mirroring endpoints on both servers.

What should you do?

- A. Configure the SQL Server service account to use Network Service.
- B. Use a server certificate.
- C. Use a database certificate.
- D. Configure the SQL Server service account to use Local System.

Correct Answer: B

### QUESTION 5

DRAG DROP

You administer three Microsoft SQL Server 2008 R2 instances.

Database mirroring is configured in High-Safety mode with Automatic Failover between the following three servers:

SQL1 is the Principal server.

SQL2 is the mirror server.

SQL3 is the witness server.

You need to upgrade SQL1 and SQL2 to SQL Server 2012. You need to ensure that downtime is minimized during the upgrade.

Which six actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Select and Place:

Configure log shipping between SQL1 and SQL2.

Upgrade SQL1 to SQL Server 2012.

Upgrade SQL2 to SQL Server 2012.

Disable log shipping between SQL1 and SQL2.

Manually failover the database from SQL1 to SQL2.

Manually failover the database from SQL2 to SQL1.

Add SQL3 back to the database mirroring solution.

Remove SQL3 from the database mirroring solution.

Correct Answer:

Configure log shipping between SQL1 and SQL2.	Remove SQL3 from the database mirroring solution.
	Upgrade SQL2 to SQL Server 2012.
	Manually failover the database from SQL1 to SQL2.
Disable log shipping between SQL1 and SQL2.	Upgrade SQL1 to SQL Server 2012.
	Manually failover the database from SQL2 to SQL1.
	Add SQL3 back to the database mirroring solution.
